About Tenity

About Tenity

We are global innovation ecosystem and early-stage investor powering the future of finance

2015

Tenity was **founded** as the corporate incubator of the Swiss Stock Exchange

31

People from 12 nationalities at an average age of 37 years at an 50/50 gender split

7

The **countries** we are active, including a local hub presence in three

2'500

The number of **applications we receive each year** for our startup programs

270

Startups have successfully **graduated** from our programs

\$370M

Total **investments** have been syndicated from our startups

Unlock the power of innovation

Tenity history

With our recent funding round and MBO we are set to become the innovation leader in the financial industry

Tenity services for corporates

We support our partners in every aspect of their innovation efforts

Objective

Learn

Gather **insights** about industry trends relevant to you and shape your innovation strategy

Collaborate

Leverage **external innovation** potential, explore wider search fields and growth options

Invest

Get **financial exposure** in disruptive and new business opportunities and M&A pipeline

Be the innovation ecosystem to create the future of finance

Magic happens when startups & corporates come together

02.

**Why
innovate?**

Source: Asymco

BLACKROCK

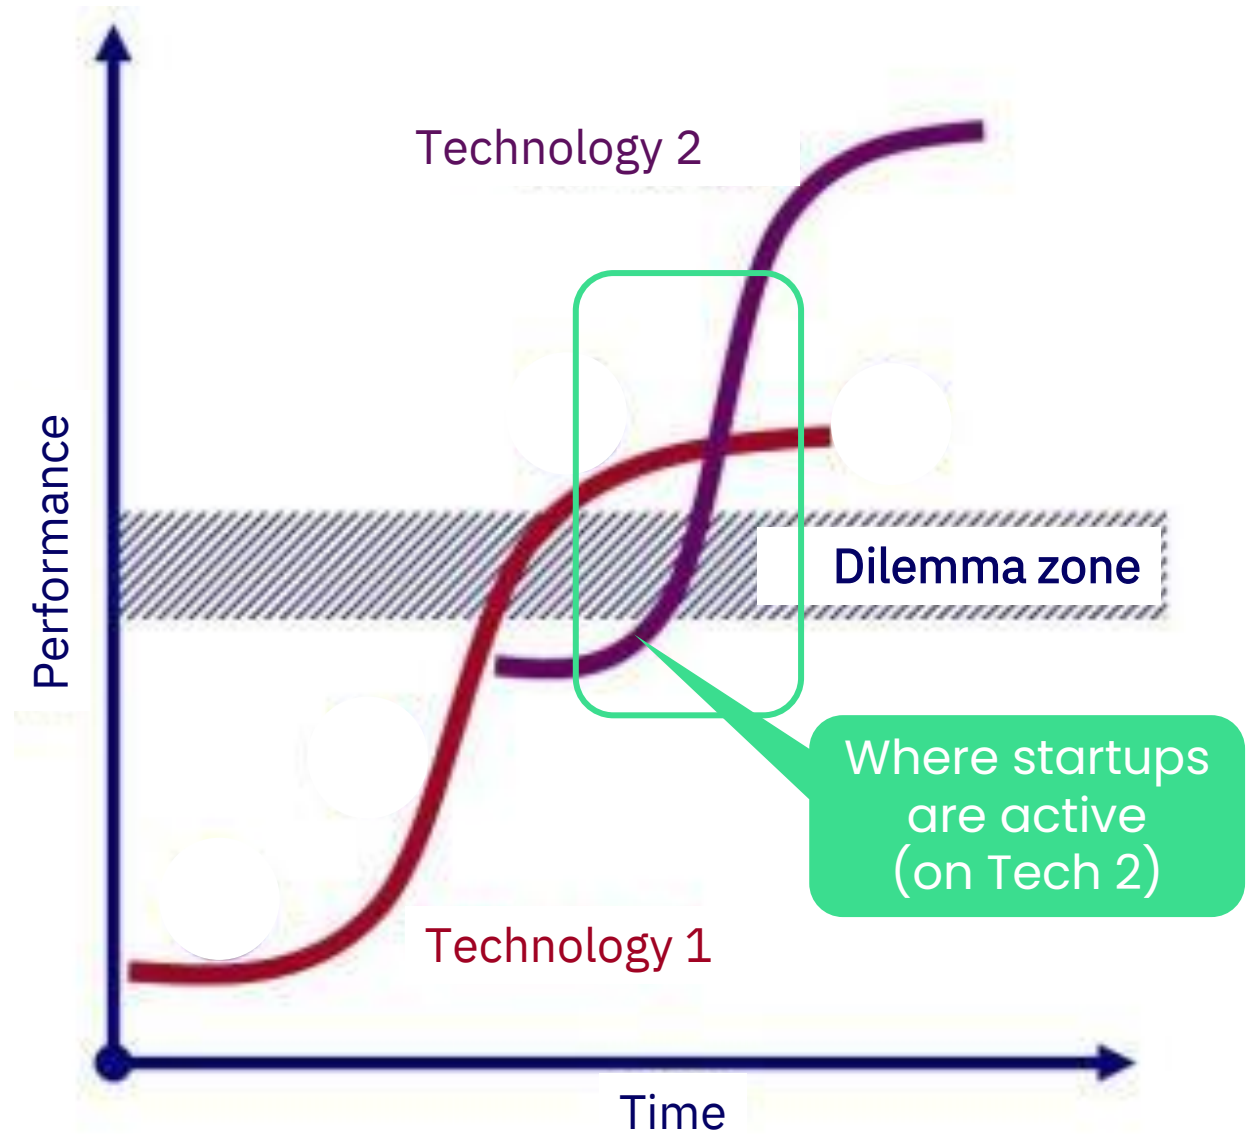

New technologies are inferior in the beginning.

However, ...

with exponential growth they **suddenly outperform**.

Innovator's dilemma
Clayton Christensen

Case in point:
“Exponential”
is difficult.

How far do you get with 30 **NORMAL** steps?

Starting point in the middle of Paradeplatz. Walking towards the lake.

1/ Across the trams-track

2/ To Sprüngli

3/ To Tiffany

How far do you get with 30 **NORMAL** steps?

Starting point in the middle of Paradeplatz. Walking towards the lake.

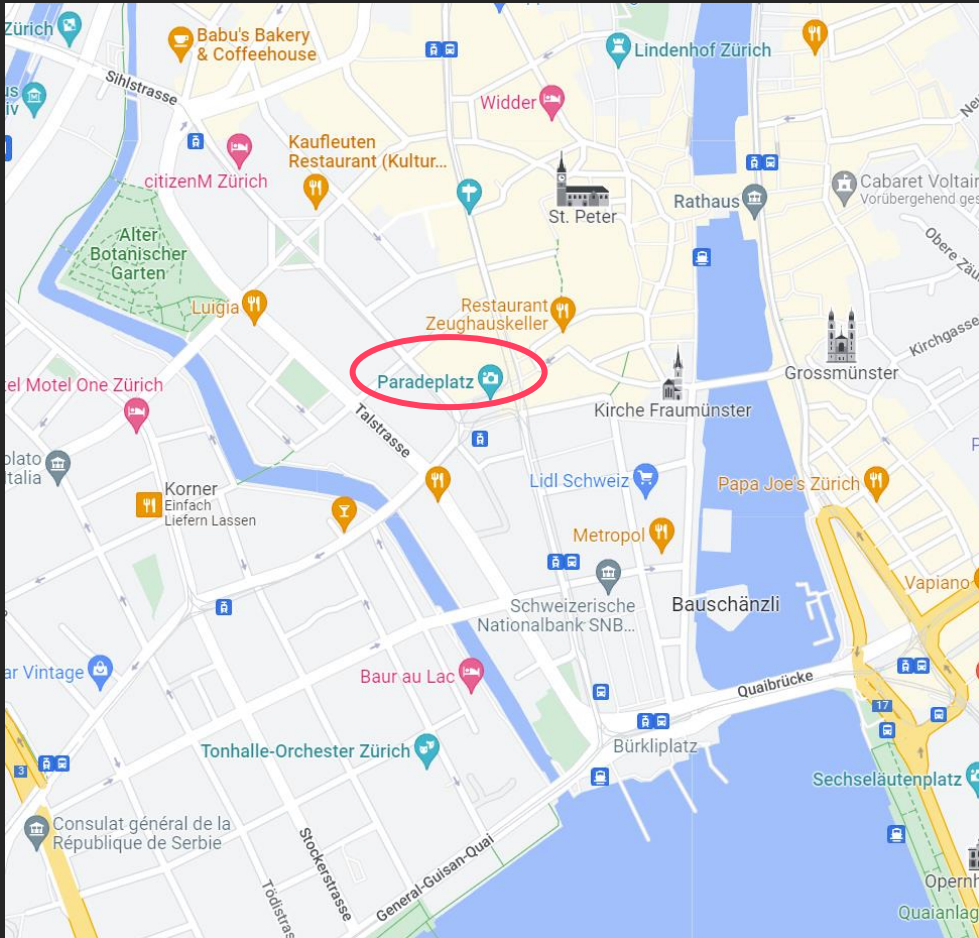

1/ Across the trams-track

2/ To Sprüngli

3/ To Tiffany

How far do you get with 30 **EXPONENTIAL** steps?
More importantly, how comfortable are you with the estimation?

1/ Into middle of Zurich Lake

2/ To the South pole

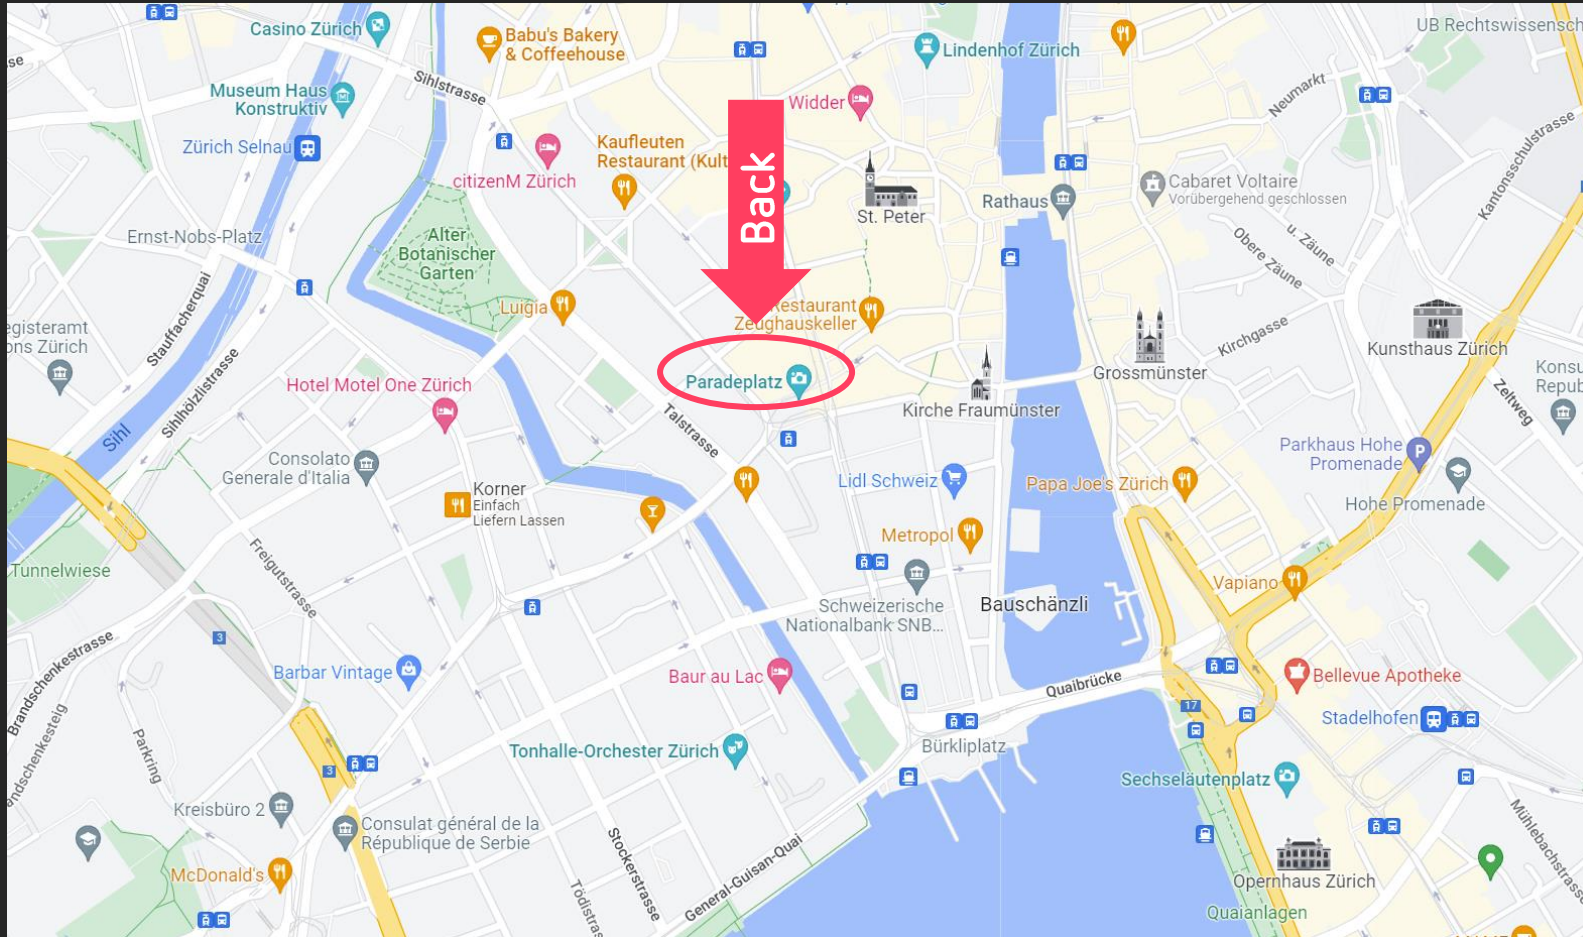

3/ To the moon

A large, detailed image of the Moon's surface, showing numerous craters of various sizes. The Moon is set against a dark, starry background of space. The text "To the moon" is overlaid on the image, with "To the" in white and "moon" in red. The Moon's surface is illuminated from the left, creating a bright edge and highlighting the textures of the craters.

To the moon

Bonus question:
Where do we end-up with
one more step? The 31st?

Yes. **Back** where we started from.

We never had to understand exponential.

... **chaos** is the result.

03.

Generative AI

Generative AI – On an exponential move

Time to Reach 100M Users

Months to get to 100 million global Monthly Active Users

89%+ of GenAI companies have been founded since Google's landmark transformation model paper was released in 2017

What made LLMs possible?

Large pre-trained models is a new paradigm for building AI systems

01

Breakthroughs in algorithm development: **transformer architecture, self-supervised and transfer learning**

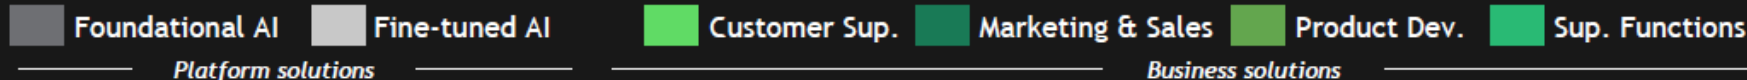

02

Availability of **large volumes** of various types of data, including text and images for model training

03

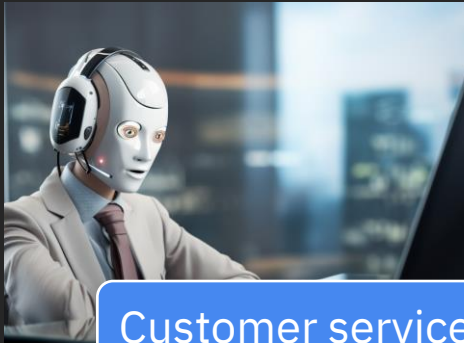

Significant increase in available **computational power and reduced cost**

Legend:

1) Transformer is a deep learning model. Transformers were introduced in 2017 by a team at Google Brain, transformers allow training on larger datasets which led to the development of pretrained systems like original GPT (generative pre-trained transformer)

Selected **use cases** for the Financial Services industry

Time to Impact

Source: BCG analysis and BCG Fintech Control Tower

“There are going to be **two kinds of companies** at the end of this decade: Companies that are **fully utilizing AI** and companies that are **out of business**. And it’s going to be that black or white.”

Peter Diamandis
Cofounder and executive chairman of
Singularity University

It's more important than ever to **be prepared**. As individual and as a company.
