

ATM Monitoring Services

ATM Monitoring is the standardized, manufacturer-independent solution for the professional, comprehensive remote monitoring of all your ATMs.

The application is optimally tailored to the multi-vendor software (MVS) and can be operated with either the MVS from Diebold Nixdorf or NCR. The SIX solution is hosted on high-availability servers in its own data centers in 24/7-operation. Of the 6,000 ATMs in Switzerland, 3,500 are already monitored with our monitoring software. This makes SIX the market leader in the ATM monitoring segment.

ATM Monitoring is available in two forms: firstly as **software as a service** (SaaS), i.e., the bank monitors its ATMs independently using the SIX solution. SIX relieves the bank from all expenses in connection with the operation of the application (e.g. release management). In addition, a bank can also transfer the monitoring of its ATMs to the SIX specialists entirely (**BPO model**).

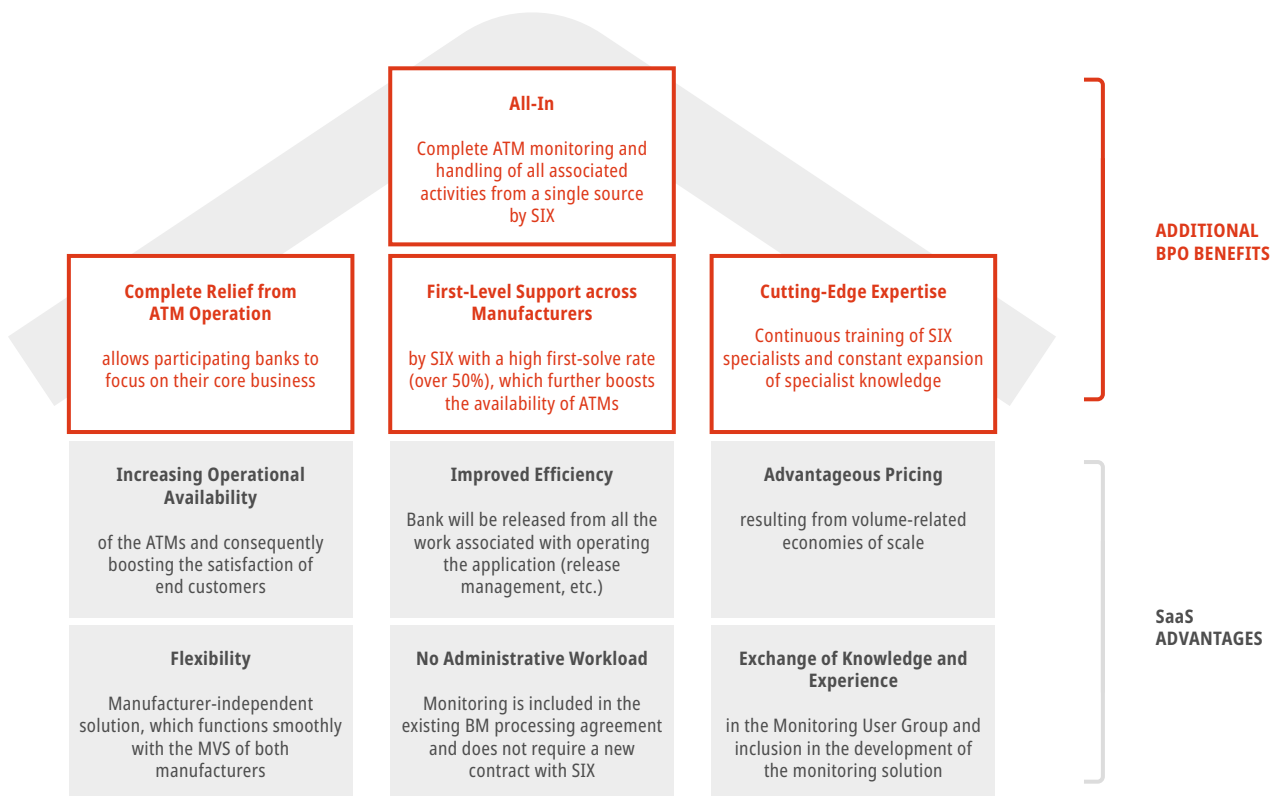

Our Offering for the Needs-Based Implementation of ATM Monitoring

The Key Functions of ATM Monitoring

- **Monitoring:** Clear presentation of the operating status of your ATMs and detailed device status of the individual ATMs and groups of ATMs.
- **Alerting** by SMS or e-mail in the event of incidents reported by the ATMs. Alerts can be configured individually (select events, create alarm groups, etc.).
- **Remote operation** allows functions to be switched on or off at the click of a mouse (e.g. deposits), the shutting down or restarting of ATMs.
- **Users' access rights** follow a role-based concept.
- **Software and advertising images can be distributed** on selected ATMs and groups of ATMs simply and quickly at the click of a mouse.
- **Intuitive user interface:** Modern and easy to use; available in German, French, Italian and English.
- **Technical reports & statistics:** Option of calling up standardized or preconfigured reports (e.g. details of cash levels and denominations). Individual statistics can also be prepared and displayed, as required.
- **Automatic information** to cash transport companies or hardware servicing partners in the case of defined breakdowns/events.

Benefits for the Bank – How You Benefit

Outlook

You will also benefit from the advantages of ATM Monitoring by SIX. For more information, please contact your key account manager. In addition to ATM Monitoring, SIX is also developing additional services for participating banks to ensure that ATMs are managed

efficiently and securely (such as ATM Cash Management or ATM Security Services). The new services are being developed and expanded on an ongoing basis and will be announced shortly.
