

Key information for parties using Finance IPNet

Version: July 7, 2023 (Please disregard previous versions)

The following information is addressed to all institutions that currently consume SIX services via Finance IPNet (MPLS). There is an acute need for action here:

1. Decommissioning of Finance IPNet

At the end of September 2024, SIX will decommission Finance IPNet as the gateway to its infrastructure services. As a result all parties using Finance IPNet are required to take action and migrate to an alternative gateway. See also [News-item](#).

Please note: customers currently using an alternative gateway (e.g. Internet) do not need to take action. Equally, services consumed via alternative gateways are not affected by the decommissioning of Finance IPNet.

2. Identification of services consumed via Finance IPNet

Parties using Finance IPNet are encouraged to first and foremost analyse and identify which services are currently consumed via Finance IPNet. A list of most services available via Finance IPNet, including IPs, is provided in the appendix of this document (which can be used for e.g. traffic analysis).

Note: if in doubt please first consult the list in the appendix, and then contact the service management of the service in question.

3. Alternative gateways

SIX offers its customers multiple alternatives to the gateway Finance IPNet

- a) SSFN (Secure Swiss Finance Network): This is the recommended gateway and can be used by eligible parties. For more details please visit www.six-group.com/ssfn
- b) Managed leased lines, (standard) leased line or P2P connections: These gateways are provided on a case by case basis and dependent on service in question
- c) Internet: Nearly all services are available via the internet

4. Suggested criteria to choose alternative gateway

Parties using Finance IPNet are encouraged to analyse the current usage of Finance IPNet, i.e. for which services Finance IPNet is used, and to take into consideration future developments.

Further relevant decision criteria include

- the type of services to be consumed
- relevant and company individual security criteria (e.g. criticality, availability)
- eligibility to SSFN
- costs (setup and running)
- organisational structure

5. Steps to set-up alternative gateway and consume services

Depending on the chosen alternative gateway, the setup differs. However, some generic steps can be mentioned

- a) If required: prepare / set-up alternative gateway and make it available in parallel (IP addresses are not shared)"
- b) Define first service with which to test the alternative gateway and gather necessary data to access the service via the alternative gateway (e.g. via service management of the service)
- c) Perform necessary configuration changes to the service to consume the service via the alternative gateway, beginning with the QA-instance (if available) and then the productive instance. Repeat this step with all relevant services

6. Support provided by SIX

Please do not hesitate to contact us at via the [contact form](#).

Appendix

List of services available via Finance IPNet which need to be migrated by June 2024

Service	Environment	Finance IPNet Address	Contact Service Management
