

# **Implementation Guidelines for ISO 20022 Interbank Messages**

SIC and euroSIC

Bank and Third-party System Payments (pacs.009)

## General notes

---

SIX Interbank Clearing reserves the right to modify this document, as the need arises, at any time without prior notice.

SIX Interbank Clearing reserves all rights for this document including the rights of photomechanical reproduction, storage on electronic media and the translation into foreign languages.

Although great care has been taken in the compilation and preparation of this work to ensure accuracy, errors and omissions cannot be entirely ruled out. SIX Interbank Clearing cannot be held liable for any decision made or action taken in reliance on the information in this document or for any consequential, special or similar damages.

If you detect any errors in this document or have any ideas or suggestions for improvements we would be extremely grateful if you would notify these by e-mail to **[operations@six-group.com](mailto:operations@six-group.com)**.

## About this document

---

### Target audience

The "Implementation Guidelines for ISO 20022 Interbank Messages" are addressed to all participants of the Swiss RTGS systems SIC and euroSIC, using the ISO 20022 message standard.

### Purpose

The Implementation Guidelines consist of a base document with general information concerning all message types and various module documents – one each per ISO 20022 message type, e.g. this document for the message type "pacs.009" – with message-specific information, including information on the application-specific handling of individual elements. They specify the messages to be submitted to and delivered from the RTGS systems SIC and euroSIC in the ISO 20022 message standard.

### Amendment control

All the amendments carried out on this document are listed in an amendment record table showing the version, the date of the amendment, a brief amendment description and a statement of the sections concerned.

### Associated documents

Supplementary information to the Implementation Guidelines can be found in the reference documents listed in the Base Document.

## Amendment control

All the amendments carried out on this document are listed below, with the version, the date of the amendment, a brief amendment description and a statement of the sections concerned.

Version	Date	Amendment description	Section
1.0	01.01.2014	First edition	all
1.1	01.10.2014	Following element changed: CdtTrfTxInf/UndrlygCstmrCdtTrf	4.3
1.2	01.12.2014	Payment type-specific definition in element GrpHdr/SttlmInf/ClrSys for currency EUR changed for FI-to-FI-payments and cover payments.	4.1
1.3	16.04.2015	Document name changed, Logo replaced, Wording adapted to the terminology of the RTGS platform.	all
		Mapping to SWIFT Field 108 added in "Member Identification" and "BIC" of the instructing agent.	4.1
1.4	02.07.2015	Notes on debtor/creditor split into notes for FI-to-FI-payment/cover payment and for other payment types.	3.3
		Name and address of the financial institution of the debtor/creditor may only be used for FI-to-FI payments and for cover payments.	4.2
		In the "Instruction For Creditor Agent" the length of all the sub-elements <InstrInf> must not exceed 210 characters (text moved from <InstrInf> to <InstrForCdtAg>).	4.2
		If used, the instructed amount must be 0.00 or more.	4.2, 4.3
1.5	05.11.2015	Mapping information for SIC Field 46F and FIN Field 59F added.	4.3
	20.07.2016	Title page and colour scheme for tables and illustrations amended to comply with the new Brand Identity Guidelines.	all
		"pacs" credits from PostFinance added for compensation payments.	3.5.3, 4.2
1.6	30.11.2016	New use case "Viseca settlement"	3.1
		New payment type "Viseca settlement"	3.2, 4.2
		New special character "," in transaction reference for payment type "Viseca settlement"	3.5.2

# 1 Overview of documentation structure

These Implementation Guidelines are modular in structure:

- The base document contains general information applying to all messages.
- The module documents – one for each ISO 20022 message type – contain message-specific information, including information on the application-specific handling of certain elements.
- For each Implementation Guideline, an XML schema (XSD) and generic XML sample messages will be published.

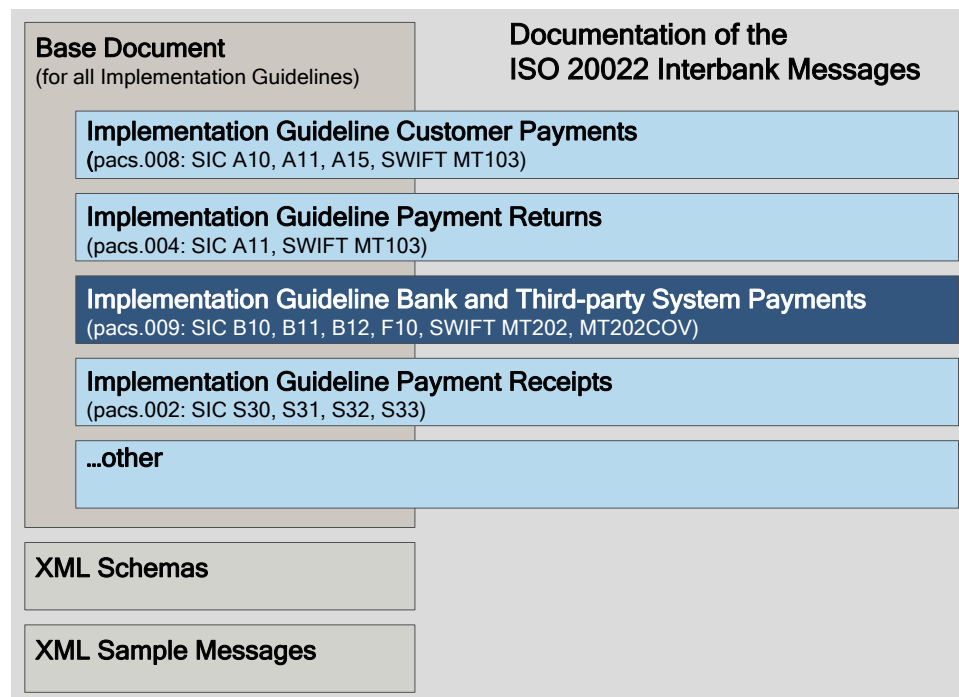

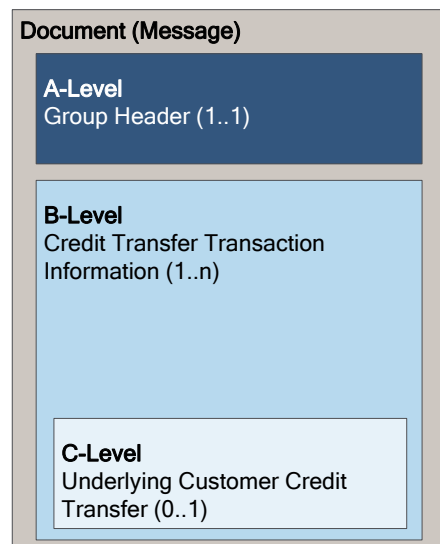

Figure 1: Documentation structure

## 2 ISO definitions

In **bank payments**, the "Financial Institution Credit Transfer" message (pacs.009) is sent from a financial institution (instructing participant) to the RTGS systems and from the RTGS systems to a financial institution (instructed participant).

In **third-party system payments**, the "Financial Institution Credit Transfer" message (pacs.009) is sent by a third-party system to the RTGS systems and from the RTGS systems back to the third-party system. The sender and recipient is the relevant third-party system (SECOM, Eurex etc.).

The "Financial Institution Credit Transfer" message is used on the basis of the ISO 20022 XML schema "pacs.009.001.02".

The "pacs.009" message is essentially structured as follows:

- **A-Level:** Message level, "Group Header" element. This block must occur exactly once.
- **B-Level:** Payment or transaction level, "Credit Transfer Transaction Information" element. This block must occur at least once and can occur n times in the ISO definition. In the RTGS systems, this block is only permitted once.
- **C-Level:** Customer payment level, the "Underlying Customer Credit Transfer" element. This block is mandatory in covering payments, but not allowed in any other payment type.

Figure 2: Basic message structure of the "pacs.009" message

## 3 Business specifications for the RTGS systems

### 3.1 Use cases

The "Financial Institution Credit Transfer" message is used in the RTGS systems in the following use cases for **bank payments**:

Use case	Input/Output	SIC	FIN	ISO 20022
FI-to-FI-payment	I/O	B11	MT202	pacs.009
Compensation payment	I/O	B10	MT202	pacs.009
Cover payment	I/O	B12	MT202COV	pacs.009
Sight deposit account transfer by the participant	I/O	B10	MT202	pacs.009

Table 1: Use cases for bank payments using the "pacs.009" message

The message "Financial Institution Credit Transfer" is used in the RTGS systems in the following use cases for **third-party system payments**:

Use case	Input/Output	SIC	FIN	ISO 20022
SECOM settlement	I/O	F10	—	pacs.009
Eurex settlement	I/O	F10	—	pacs.009
Repo settlement	I/O	F10	—	pacs.009
Debit settlement	I/O	F10	—	pacs.009
Terravis settlement	I/O	F10	—	pacs.009
Viseca settlement	I/O	—	—	pacs.009

Table 2: Use cases for third-party system payments using the "pacs.009" message

## 3.2 Payment types

Various different payment types can be handled using a "pacs.009" message. The following are provided for **bank payments**:

Payment type	Code value
FI-to-FI-payment	F2FPMT
Compensation payment	CMPPMT
Cover payment	COVPMT
Sight deposit account transfer by the participant	PPTTSD

Table 3: List of payment types and their code values in the "pacs.009" message

The following payment types are provided for **third-party system payments**:

Payment type	Code value
SECOM settlement	SECSTM
Eurex settlement	EUXSTM
Repo settlement	REPSTM
Bancomat settlement	BCMSTM
Tancomat settlement	TCMSTM
EFT/POS settlement	POSSTM
Terravis settlement	STVSTM
Viseca settlement	VISSTM

Table 4: List of payment types and their code values in the "pacs.009" message

To ensure that specific payment types can be defined and validated correctly, the corresponding code values are provided in the *CdtTrfTxInf/PmtTpInf/LclInstrm/Prtry* element for identification purposes.

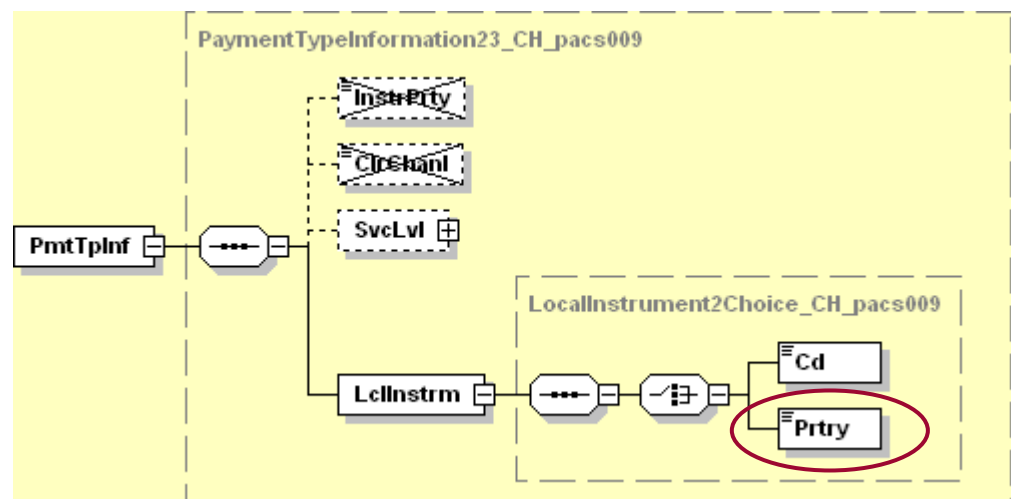

Figure 3: Indication of the payment type in the "pacs.009" message

### 3.3 Naming of the parties in a bank or third-party system payment

In bank or third-party system payments, the parties involved are named as follows:

Name	Comment	ISO 20022
Debtor	The institution making the payment	Debtor
Instructing Participant	The instructing participant has a settlement account in the RTGS system which is debited	Instructing Agent [Member ID]
Optional ID	Is filled in by the RTGS system when a delivery is made by system managers for a participant: ID of the system manager	Is not shown in the message
Optional ID	Is filled in by the RTGS system in the case of a concatenated IID: the participant whose settlement account in the RTGS system is being credited and to whom the transfer is being made	Instructed Agent [Other ID]
Instructed Participant	The instructed participant has a settlement account in the RTGS system which is credited	Instructed Agent [Member ID]
Intermediary Agent	When present, the agent who manages the account at the creditor's financial institution	Intermediary Agent
Creditor Agent	When present, the agent who manages the account of the creditor	Creditor Agent
Creditor	The institution receiving the payment	Creditor

Table 5: Names of the parties involved in bank or third-party system payments

## Notes on the individual parties:

### Debtor/Creditor

- FI-to-FI-payment and cover payment:
  - If the instructing participant is the same as the debtor, then the same information is sent in the *"Debtor"* element as under *"Instructing Agent"* (however, in the case of conversion to other message standards, the identification is only forwarded once).
  - If the instructed participant is the same as the creditor, then the same information is sent in the *"Creditor"* element as under *"Instructed Agent"* (however, in the case of conversion to other message standards, the identification is only forwarded once).
- Other payment types:
  - The instructing participant must be identical to the debtor. This means that all the information in the *"Debtor"* element must have the same content (identical string) as the information in the *"Instructing Agent"* element. Exception: If the first 8 digits of a BIC8 and BIC11 are identical and if the last three digits of the BIC11 contain the value "XXX", then these two BICs are considered identical.
  - The instructed participant must be identical to the creditor. This means that all the information in the *"Creditor"* element must have the same content (identical string) as the information in the *"Instructed Agent"* element. Exception: If the first 8 digits of a BIC8 and BIC11 are identical and if the last three digits of the BIC11 contain the value "XXX", then these two BICs are considered identical.

### Instructing Participant/Instructed Participant

- The *"Instructing Agent"* is a compulsory field (mandatory, Input/Output). In bank payments, the financial institution plays a dual role as system participant and sender, while in third-party system payments only the system participant is shown. The *"Instructing Agent"* is also used together with the *"Transaction Identification"* element and the *"Message Identification"* for duplicate checking (like the SIC field 02).
- The *"Instructed Agent"* element must be filled in by the sender with the name of the system participant on the creditor side.
- On the basis of the "SWIFT Translation Rules", the two elements *"Instructing Agent"/"Instructed Agent"* are used at *<GrpHdr>* level; entering them at *<CdtTrfTxInf>* level is not supported.
- The information that is delivered in the input under *"Instructed Agent"* is forwarded in the output by the RTGS systems unchanged.
- In the case of concatenation, the details of the destination for the concatenation are given in the output under the following sub-element of *"Instructed Agent"*: *InstdAgt/FinInstnId/OthrId*.
- Details of the destination for the concatenation are only given in the *"Instructed Agent"*, even if in the input the elements *"Instructed Agent"/"Creditor"* were sent with the same information about the system participant.

**Intermediary Agent**

- The "*Intermediary Agent*" can only be present for FI-to-FI payments and for cover payments. Only one variation of the "*Intermediary Agent*" is supported.
- The information that is delivered in the input under "*Intermediary Agent*" is forwarded in the output by the RTGS systems unchanged.

**Creditor Agent**

- The "*Creditor Agent*" can only be present for FI-to-FI payments and for cover payments.
- The "*Creditor Agent*" must be used if an "*Intermediary Agent*" is present.
- The information that is delivered in the input under "*Creditor Agent*" is forwarded in the output by the RTGS systems unchanged.

### 3.4 Addressing "Institutions"

#### Instructing Agent/Instructed Agent

- Addressing using the IID or BIC
- The following elements can be used:  
BIC: `.../FinInstnId/BIC`  
IID: `.../FinInstnId/ClrSysMmbld/Mmbld`  
and "Cd = CHSIC" is mandatory under `.../ClrSysMmbld/ClrSysId/Cd`  
(Format: 6 digits numerical i.e. only digits 0 – 9)
- The sub-elements `.../FinInstnId/BIC` and `.../FinInstnId/ClrSysMmbld` must not be used at the same time.
- The identification used by the sender is forwarded to the recipient unchanged.
- The use of "Name" and/or "Postal Address" is not permitted.  
Reason: these "Agents" have to be participants in the RTGS systems and are therefore only addressed using their unique identifications.

#### Debtor/Creditor/Intermediary Agent/Creditor Agent

- This can generally be addressed using any kind of identification.
- The sub-elements `.../FinInstnId/BIC` and `.../FinInstnId/ClrSysMmbld` must not be used at the same time.
- A full address including the "Name" and "Postal Address" elements can also be entered.  
The following rules must be taken into account:
  - a) Where the BIC is used, the "Name"/"Postal Address" must not be entered.
  - b) "Postal Address" is only permitted in combination with "Name".
  - c) "Name" can be used without "Postal Address".

### 3.5 Use of references

Along the processing chain, various references are sent in the "pacs.009" message.

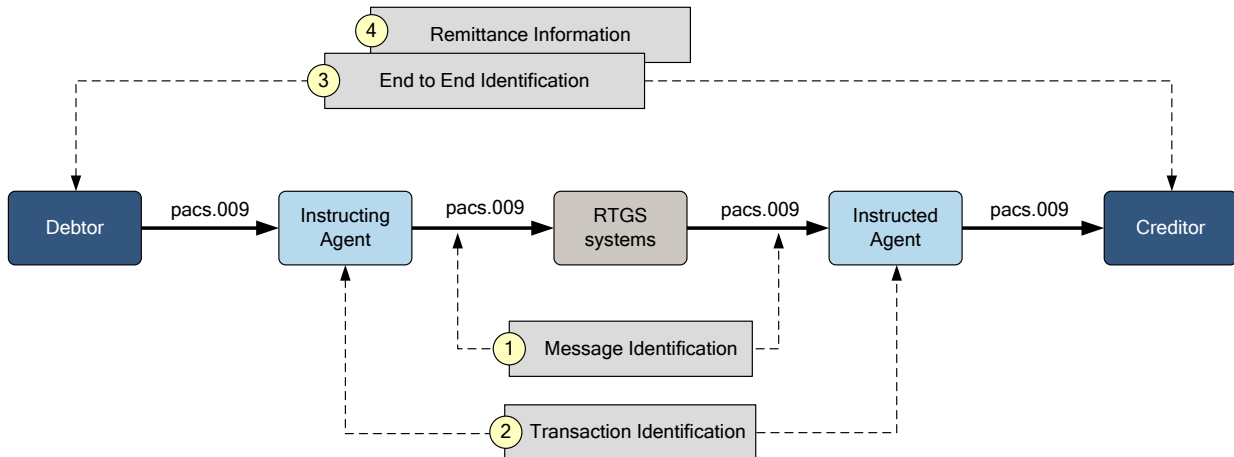

Figure 4: Use of references

#### 3.5.1 Message reference

##### Message Identification (A-Level) ①

The message identification is a "technical" reference which is generated by the producer of the message. In a message from the instructing participant to the RTGS systems, this is generated by the instructing participant (Instructing Agent). In a message from the RTGS systems to the instructed participant, a new message is produced and so a new <MsgId> is generated by the RTGS systems. The <MsgId> is used in the RTGS systems for duplicate checking at message level ("technical" duplicate checking).

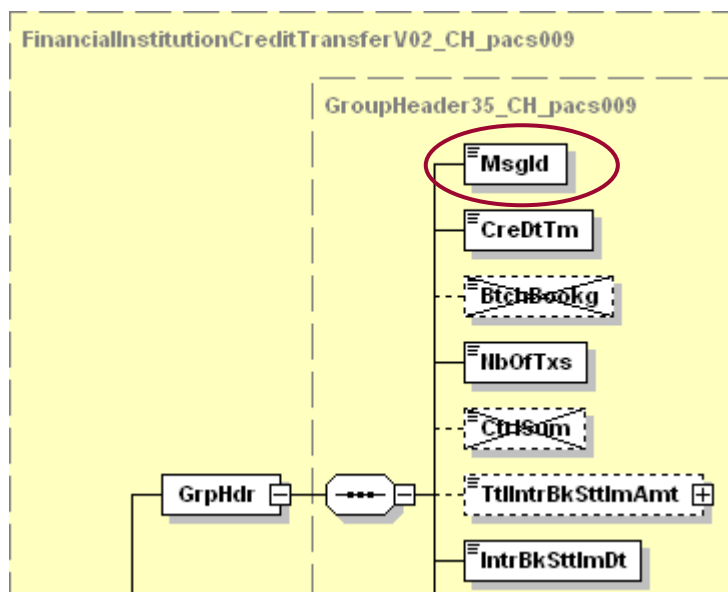

Figure 5: Message Identification

### 3.5.2

### Transaction reference

#### Transaction Identification (B-Level) <sup>2</sup>

The transaction identification is the unique reference for a transaction. This reference is assigned by the instructing participant when the transaction is being set up and is forwarded unchanged by the RTGS systems to the instructed participant. The transaction identification is also sent in the acknowledgement to the instructing participant as the transaction reference. The transaction identification is used for "technical" duplicate checking at transaction level.

The first position in the transaction identification must contain the following character, depending on the payment type:

Payment type	Character required in first position
All bank payments	Digit "0" to "9" or letter "a" to "Z"
SECOM or Repo settlement	Special character "/"
Eurex settlement	Special character "?"
Bancomat, Tancomat or EFT/POS settlement	Special character "-"
Terravis settlement	Special character ":"
Viseca settlement	Special character ","

Table 6: Character required in first position of the transaction identification

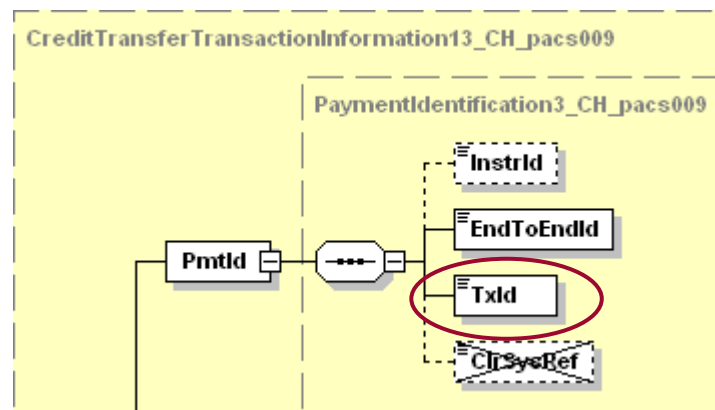

Figure 6: Transaction Identification

### 3.5.3

#### Debtor reference

##### "End to End Identification" <sup>3</sup>

The debtor can provide the payment with a unique reference which is forwarded unchanged throughout the whole processing chain in the *"End to End Identification"* element. The element contains the entry "NOTPROVIDED", if there is no known identifier.

For **FI-to-FI payments**, it is recommended that "NOTPROVIDED" is used, because this information is not normally forwarded to the creditor.

For **compensation payments**, "NOTPROVIDED" may only be used if the creditor reference is given in the *<InstrId>* element. For ISR-, ECA-I, ECA-F and "pacs" credits from PostFinance (payment code in the *<SvcLvl>* element = 712), the reference is structured as follows:

- **ISR, ECA-I, ECA-F:** SYMMDDAAAAAAAAA, where:

S = Slip type (B = ECA-I, V = ECA-F, E = ISR)

YYMMDD = Value date

AAAAAAAAA = Account number

- **pacs:** SYMMDD, where:

S = Slip type (P = pacs)

YYMMDD = Value date

For **cover payments**, the transaction identification from the underlying customer payment must always be used. "NOTPROVIDED" is not permitted.

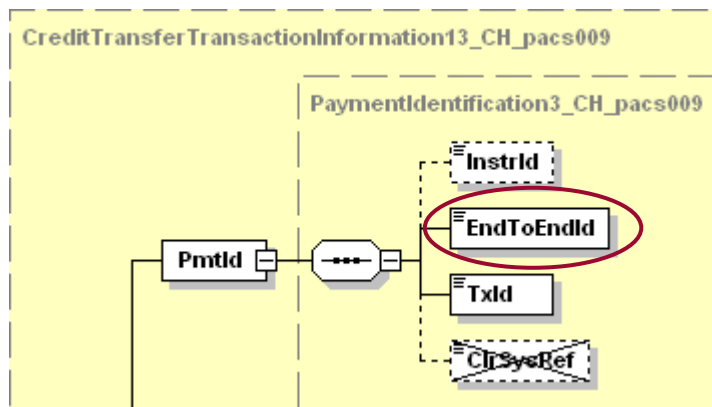

Figure 7: End to End Identification

### 3.5.4

### Creditor reference

#### "Creditor Reference" ④

In addition to the references in the processing chain that are listed above the *"Instruction Identification"* element can also contain a payment reference for the creditor (Creditor Reference).

For **compensation payments**, it must be used if the payment is a compliance payment or a remittance (3rd position of the payment code in the <SvcLv> element = 1 or 3).

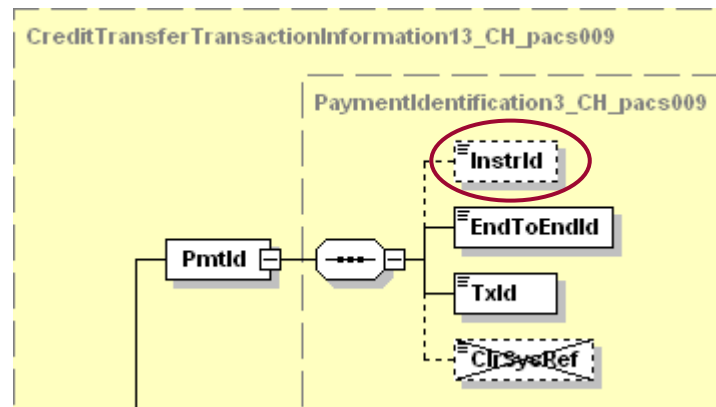

Figure 8: Instruction Identification

### 3.6 Specific Swiss code values

At various points in the "pacs.009" message, specific Swiss code values are used. These are all defined for "Proprietary" versions and are used for the unique identification of specific values in the Swiss Interbank Standard.

These code values are used whenever it is not possibly uniquely to identify a transaction using values from the "ISO External Codelists".

#### 3.6.1 Code list for specifying creditor account numbers

In **cover payments**, the following codes are available for identifying the account number version for the creditor account for the underlying customer payment:

Code value	Meaning
PRTRY	conventional format
PCACC	postal account number

Table 7: Specification of creditor account numbers

The code value is sent in the *FinInstnCdTrf/CdtTrfTxInf/UndrlygCstmrCdtTrf/CdtrAcct/Id/Othr/SchmeNm/Prtry* element.

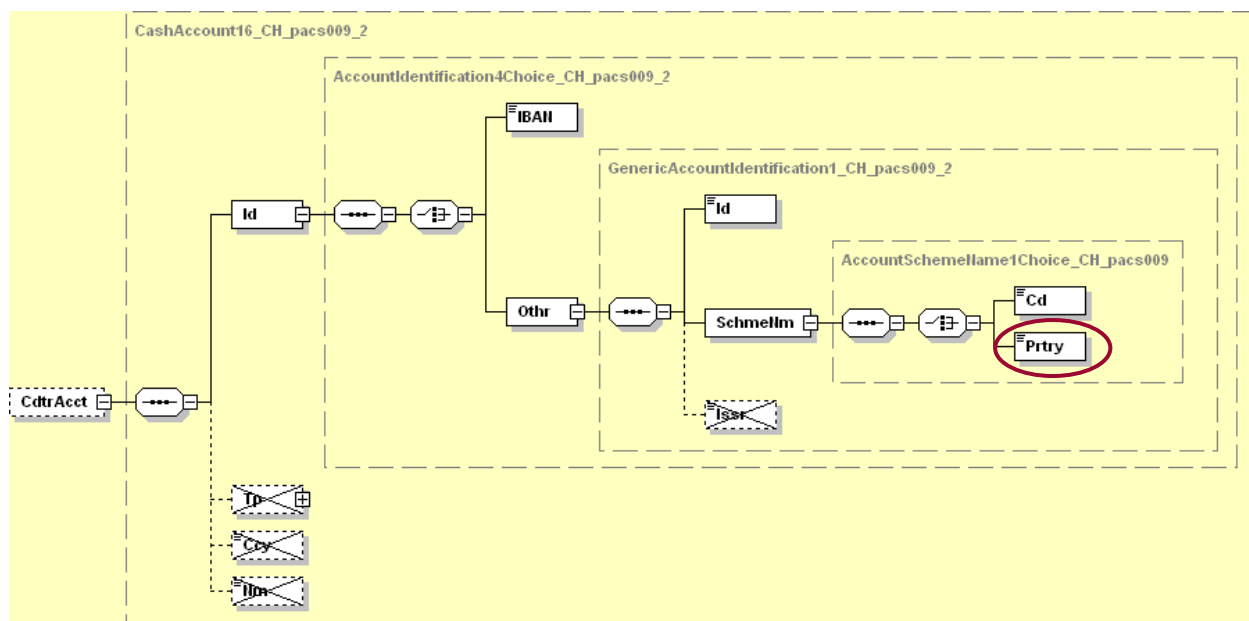

Figure 9: Account number specification

### 3.6.2 Sending processing instructions to the RTGS systems

Processing instructions can be sent to the RTGS systems for the following tasks using a code value:

- For the new function "reservation request" (LIQU) (see also section 3.7.2 "Reservation request").
- For the existing option of requesting a confirmation of settlement (CONF) (see also section 3.7.3 "Requesting a confirmation of settlement").

Code value	Meaning
LIQU	Reservation request
CONF	Request confirmation of settlement

Table 8: Code values for sending processing instructions to the RTGS systems

The code value is sent in the *FinInstnCdtTrf/CdtTrfTxInf/InstrForNxtAgt/InstrInf* element.

In order to reflect any combination of these processing instructions and any future processing instructions, the element *FinInstnCdtTrf/CdtTrfTxInf/InstrForNxtAgt/InstrInf* can be sent more than once.

Only one processing instruction can be sent on each occasion. The same processing instructions may not be sent more than once.

Figure 10: Entering a code for sending processing instructions to the RTGS systems

### 3.6.3 Entering a payment code

For **compensation payments**, the original transaction must be quoted in the "Service Level" element, in the form of a proprietary 3-position payment code. All the values listed in the Swiss RTGS Handbook are valid, with the exception of Code 088 (corresponds to payment type "Transfer to sight deposit account by participant").

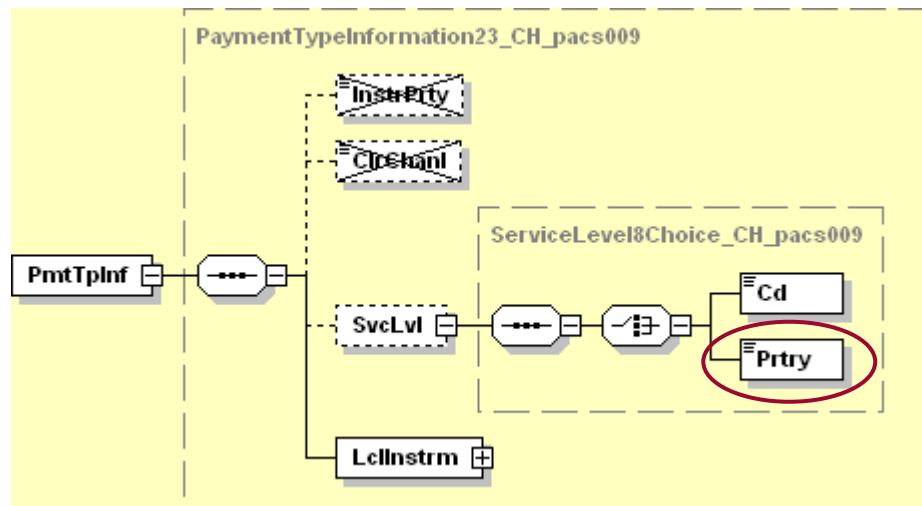

Figure 11: Entering a payment code for compensation payments

### 3.6.4 Information about delivering after clearing stop 1

For **compensation payments** and **transfers to sight deposit account by participants** which are delivered after clearing stop 1 and were still settled on the same clearing day, the value "CS1" is only entered in the message from the RTGS systems to the participant in the `FinInstnCdtTrf/CdtTrfTxInf/InstrForCdtAgt/InstrInf` element.

Figure 12: Information about delivering after clearing stop 1 for compensation payments and transfers to sight deposit account by participants

### 3.6.5 Entering the instructed payment amount

For **FI-to-FI payments**, the instructed payment amount can be sent in unstructured form in the "Remittance Information" element. To do this, the *<Ustrd>* element must be used three times according to the following definitions:

- 1st occurrence: **Currency code** (must contain a valid currency code according to ISO 4217)
- 2nd occurrence: **Instructed payment amount** (before deduction of fees and/or conversion from foreign currencies)
- 3rd occurrence: **Conversion rate** for the ordered payment amount (foreign currency to CHF or EUR)

Figure 13: Entering the instructed payment amount in FI-to-FI payments

The "Remittance Information" element must not be used for any other payment types.

## 3.7 New functions in the RTGS systems

The functions described below are only available in the RTGS systems for payment messages in the ISO 20022 message standard.

### 3.7.1 Entering an earliest possible settlement time

By entering an earliest settlement time, the sender has the option of adding payments to the wait queue at a specific time. To do this, the calendar date and time of the earliest requested settlement time must be given. Entering a calendar date is required because in the RTGS systems one clearing day extends across more than one calendar days.

To ensure that the payment is correctly processed when the earliest settlement time is reached, various consistency checks are carried out when the payment is received. The following conditions should be taken into account:

- A valid calendar date and a valid time must be sent.
- If the indicated earliest settlement time is before the time of delivery it will be replaced by the time of delivery. The change will be advised in the acknowledgement "pacs.002" with status "ACWC".
- The earliest settlement time is entered in addition to the requested settlement date. To avoid inconsistencies, a check is carried out to find out whether the time specified is within the clearing day given for the requested settlement date. If this is not the case, the payment will be rejected.
- The checks on the validity of the time are based on the clearing stop times according to the standard daily schedule for the clearing day in question. For operational reasons, the system manager may alter the actual clearing stop times. To avoid processing problems due to subsequent alterations, the requested time must not be between clearing stops 1 and 3 on the clearing day in question.
- Where an earliest settlement time is used, the sender must ensure that the requested settlement date can be adhered to. If this is not the case (e.g. not a banking business day, date is in the past), the payment will be rejected.

A requested earliest settlement time can be entered in the *FItoFICstmr CdtTrf/CdtTrfTxInf/SttlmTmlIndctn/DbtDtTm* element for the following payment types:

- FI-to-FI-payments
- compensation payments
- cover payments

For all other payment types, this entry is not permitted.

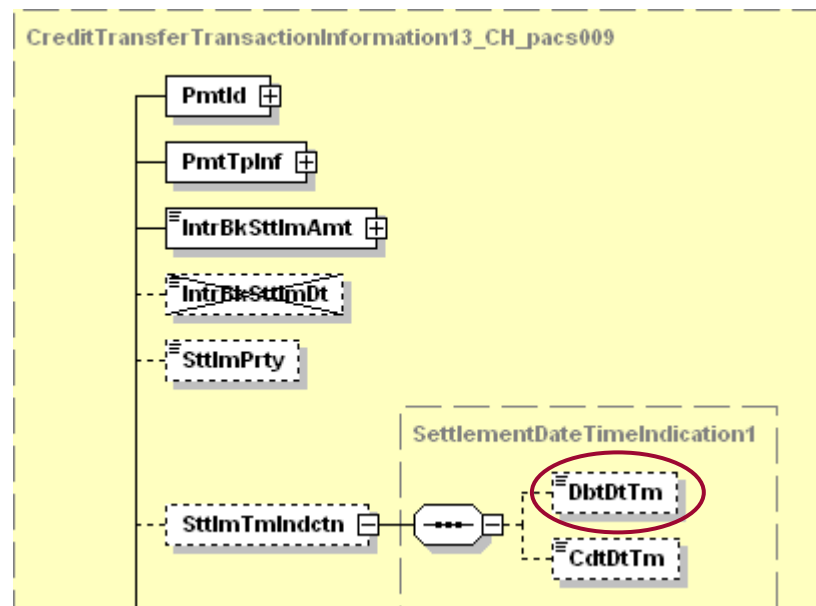

Figure 14: Entering an earliest settlement time

### 3.7.2 Reservation request

Liquidity reservations are used to ensure that there is sufficient liquidity for certain payments. The participant reserves liquidity on the settlement account. This reserved amount can then only be used to execute transfers with a reservation identifier.

A processing instruction to make use of reserved liquidity can be entered using the code "LIQU" in the `FiToFiCstmrCdtTrf/CdtTrfTxInf/InstrForNxtAgt/InstrInf` element (see also section 3.6.2 "Sending processing instructions to the RTGS systems").

### 3.7.3 Requesting a confirmation of settlement

In the RTGS systems, for payment messages using message standard ISO 20022, a confirmation of settlement can be requested by using the code "CONF" in the `FinInstnCdtTrf/CdtTrfTxInf/InstrForNxtAgt/InstrInf` element for the following payment types (see also section 3.6.2 "Sending processing instructions to the RTGS systems"):

- FI-to-FI-payments
- compensation payments
- cover payments
- sight deposit account transfers by the participant

For all other payment types, the code "CONF" is not permitted.

## 3.8 Further business specifications

Further business specifications can be found in the Base Document.

## 4 Technical specifications for the RTGS systems

### 4.1 Group Header (GrpHdr, A-Level)

The "Group Header" (A-Level of the message) occurs exactly once in the message and contains the following elements:

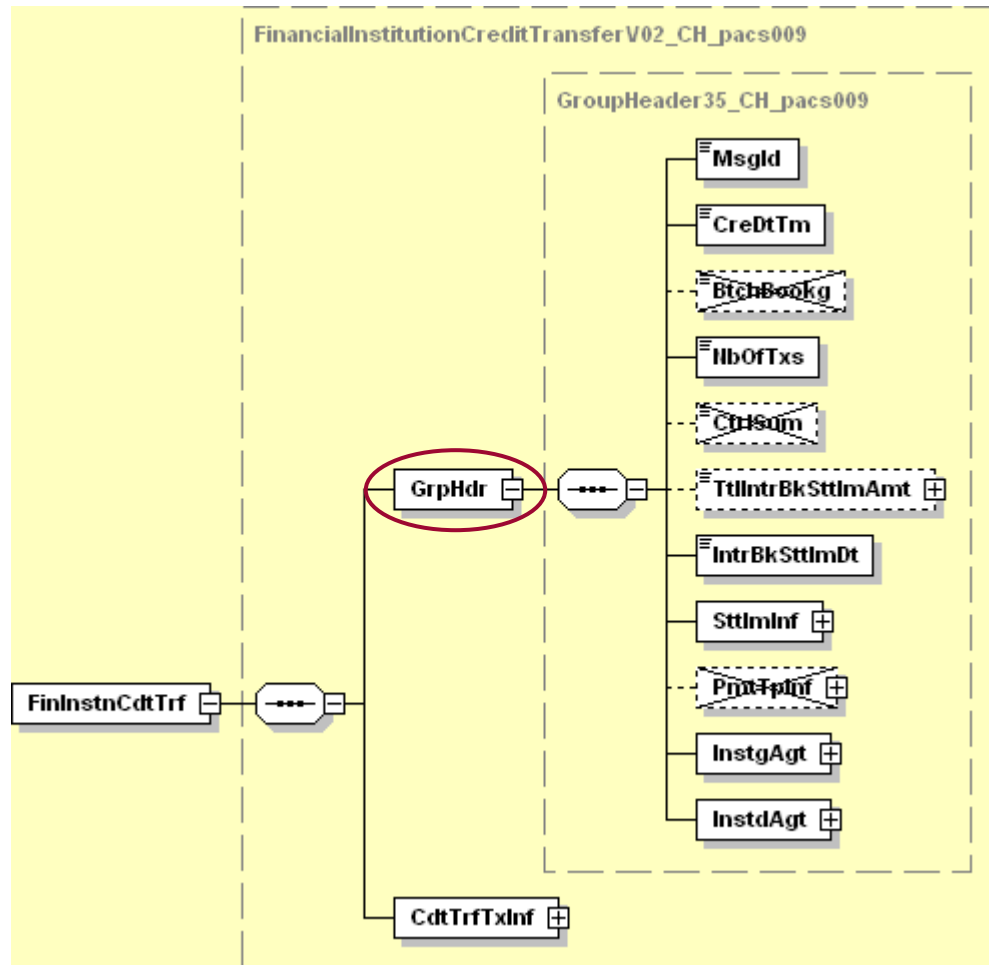

Figure 15: Group Header (GrpHdr)

The following table specifies all the elements of the "Group Header" of the "pacs.009" message that are relevant to the RTGS systems.

ISO 20022 Standard			Swiss ISO 20022 Payments Standard				
Message Item	XML Tag	Mult.	Mult.	Definition	Payment Type-specific Definition	SIC B10/B11/B12/F10	SWIFT MT202/202COV

Table 11: Underlying Customer Credit Transfer (UndrlygCstmrCdtTrf, C-Level)

## 5 Example

### 5.1 Use case: FI-to-FI-payment

This use case refers to the processing of payments between financial institutions:

The Remote Bank Frankfurt (SWIFT BIC REMODEFF, IID 098064) transfers CHF 1,000,000 to its account with the Swiss Bank Zurich (SWIFT BIC SCHBCHZH, BC No. 092052).

#### Business elements of the payment

Field designation	Content
Payment type	FI-to-FI-payment
Message identification	2012102900001
Transaction identification	2012102900001
Identification of instructing participant	098064 (CHSIC)
Currency code	CHF
Requested settlement date	20121029
Settlement amount	1000000,00
Identification of instructed participant	092052 (CHSIC)
Identification of the debtor	REMODEFF (BIC)
Identification of the creditor	SCHBCHZH (BIC)
Creditor reference	654N78

**Depiction of the payment using SIC B11**

Field designation	Content
<02> IID of instructing participant	098064
<03> Transaction reference	2012102900001
<15> Currency code	CHF
<16> Requested settlement date	20121029
<17A> Settlement amount	000001000000,00
<18> IID of instructed participant	092052
<36S> Debtor agent SWIFT address, BIC	REMODEFF
<46S> Creditor SWIFT address, BIC	SCHBCHZH
<49A> Creditor reference	654N78

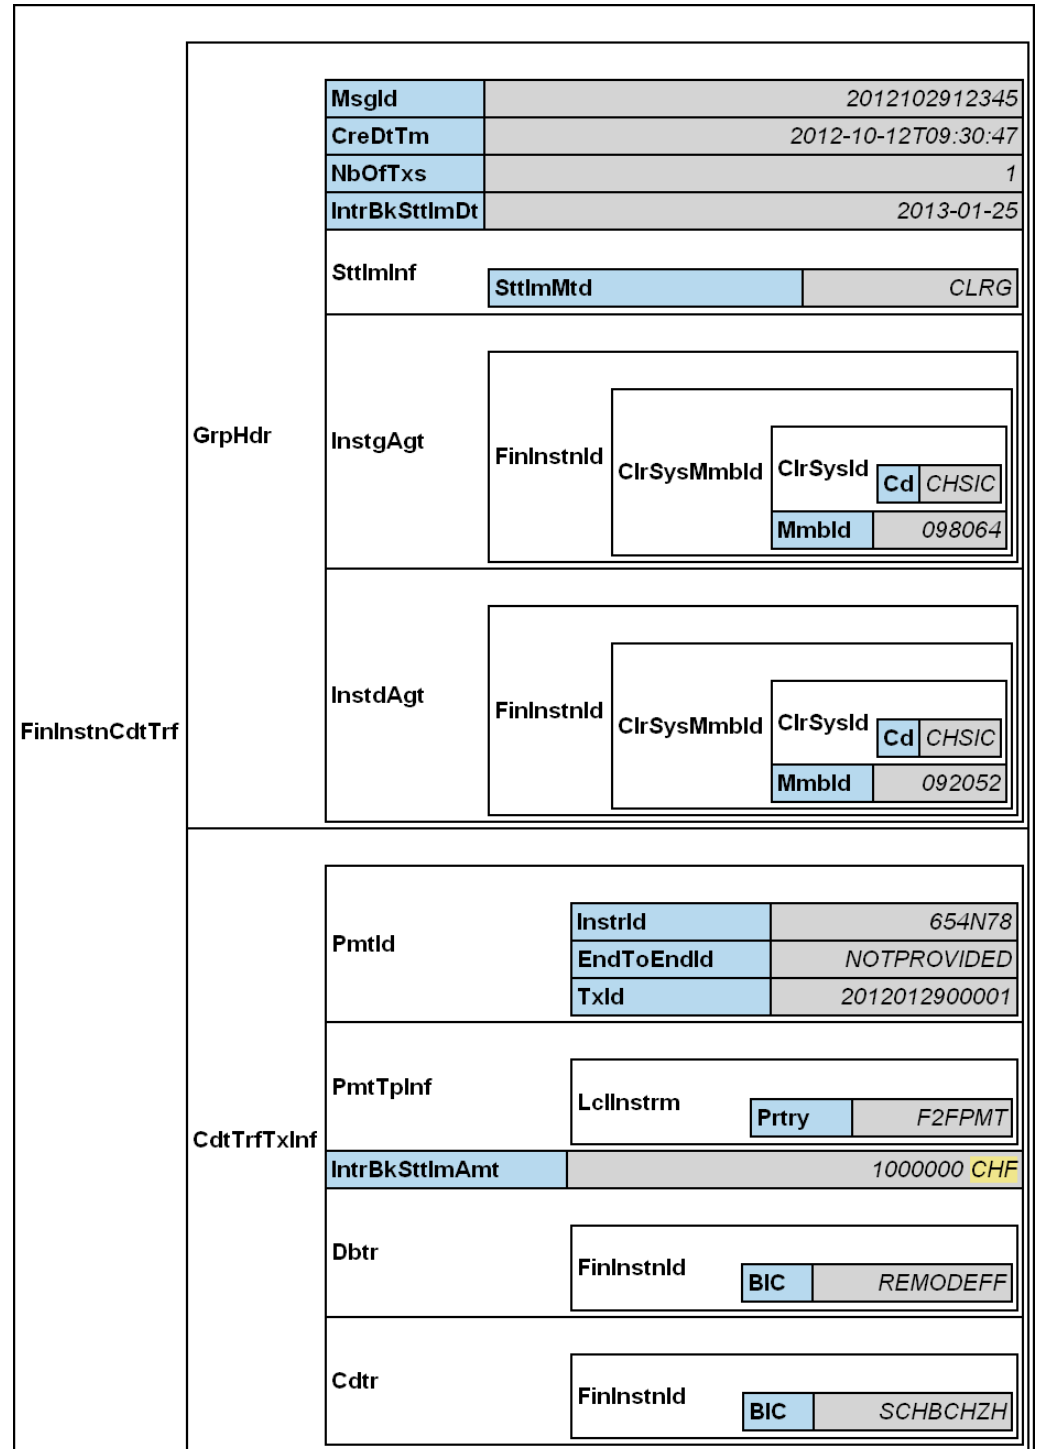

The outgoing message to the *"Instructed Agent"* also contains the following element:

Field designation	Content
<92A> Settlement date time	20121029#094545

**Depiction of the payment using SWIFT MT202**

Field designation	Content
Sender's Address	REMODEFF
20: Sender's Reference	2012102900001
21: Related Reference	654N78
32A: Value Date/Currency/Interbank Settled Amount	121029CHF1000000,
57A: Account With Institution	REMODEFF
58A: Beneficiary Institution	SCHBCHZH

### Depiction of the payment using ISO 20022 pacs.009

The outgoing message to the *"Instructed Agent"* also contains the following element:

Field designation	Content
Credit Transfer Transaction Information +Settlement Time Indication <b>++Credit Date Time</b>	2012-10-29T09:45:45

For XML version of the example see Appendix A.

## Appendix A: XML schema and example

---

### XML schema

The XML schema for "pacs.009" for the RTGS systems

- ***pacs.009.001.02.ch.01.xsd***

is published on the SIX Interbank Clearing Ltd website.

It should preferably be opened using specific XML software.

### Example

The example shown in section 5 is published on the SIX Interbank Clearing Ltd website as an XML file:

- ***pacs\_009\_Beispiel\_FI-an-FI-Zahlung.xml***

### Validation Portal

The above mentioned example message as well as this implementation guideline, the XML schema and additional examples can also be downloaded from the SIC & euroSIC Validation Portal Interbank Messages (<https://validation.iso-payments.ch/SIC4>).

After successful registration users can upload their own messages and have them validated against this implementation guideline.
