

# **Instant Payments Implementation Guidelines for ISO 20022 Interbank Messages**

**SIC IP Service**

**IP Return Request Rejection (camt.029)**

**Version 2.2, valid from 15 November 2024**

## Change history

All the changes carried out in this document are listed below with the version designation, the change date, a brief description of the change and the specification of the chapters affected.

Version	Date	Description of the change	Chapter
2.2	28.02.2024	Modifications per SIC Platform Release 5.1	
		New CH schema version camt.029.001.09.ch.03.xsd (alignment with SIC RTGS service without functional impact on SIC IP service, details according to separate document "Overview and Change Log for the XML schemas")	1.4
2.1	31.03.2023	Update, valid from November 2023	
		New CH schema version camt.029.001.09.ch.02.xsd (alignment with SIC RTGS service without functional impact on SIC IP service, details according to separate document "Overview and Change Log for the XML schemas")	1.4
		Revision of the definition in chapter "ISO definitions" due to new XML schema (alignment with SIC RTGS service, no functional change)	2
		Chapter "Further business-related definitions": Updated reference to SIC platform release 4.10 (previously: release 4.9)	3.6
		Element <code>.../Cx/Dtls/TxInfAndSts/Cx/StsRsnInf/AddtlInf</code> : Modification of code values for alignment with SIC RTGS service ("ATR053/" replaces "ATR6", "ATR057/" replaces "ATR5", "FRAD/" replaces "FRAD", "ATR072/" replaces "AT53", "ATR078/" replaces "AT59")	4.4
		Revision of the definition of level B, E, F, G, H and I (analogous to chapter 2, alignment with SIC RTGS service, no functional change)	4.2, 4.5, 4.6, 4.7, 4.8, 4.9
2.0	20.10.2022	Editorial update to the final document version, valid from November 2023 (removal of annotation "Stable working version", no functional changes)	
1.1	20.05.2022	Update (stable working version)	
		New chapter "Message flow" (clarification)	3.1
		New chapter ""Original Creation Date Time" (clarification)	3.5.2
1.0	28.02.2022	First edition (stable working version)	All

# 1 Introduction

## 1.1 Overview of the documentation structure

The Instant Payments Implementation Guidelines (IG) consist of several module documents – one each per ISO 20022 message type, e.g. this document for the message type "camt.029" – with message-specific information, including information on the application-specific handling of individual elements. They specify the messages to be submitted to and delivered from the SIC IP service in the ISO 20022 message standard.

## 1.2 Target audience

The "Instant Payments Implementation Guidelines for ISO 20022 Interbank Messages" are addressed to all participants of the SIC IP service.

## 1.3 Change control

All modifications made to this document are listed in the change history (Table 1) showing the version, the date of the change, a brief description and references to the chapters concerned.

## 1.4 XML schema

The XML schema for "camt.029" for the SIC IP service is identical to that for the SIC RTGS service and is published on the [www.iso-payments.ch](http://www.iso-payments.ch) website:

- ***camt.029.001.09.ch.03.xsd***

It should preferably be opened using specialized XML software.

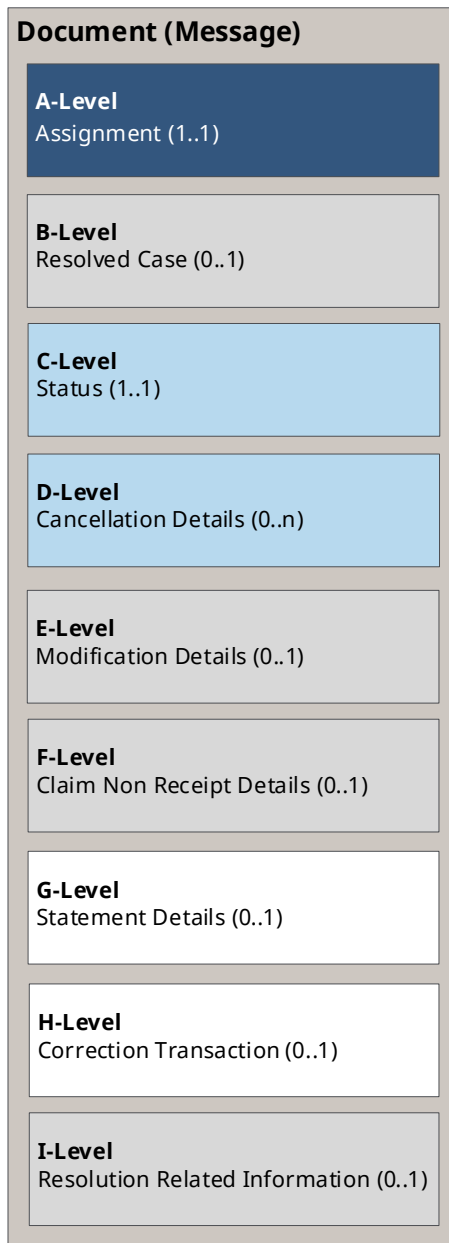

## 1.5 Reference documents

Information about participation in and operations of the SIC IP service are available in the **"SIC IP Service Handbook"**.

## 2 ISO definitions

The "Resolution of Investigation" message (camt.029) is sent from the creditor agent (the instructed participant) to the SIC IP service and from the SIC IP service to the debtor agent (the instructing participant) in order to reject a received IP return request.

The "Resolution of Investigation" message is used on the basis of the ISO 20022 XML schema "camt.029.001.09".

The "camt.029" message is essentially structured as follows:

- **A-level:** "Assignment" element. This block must occur exactly once.
- **B-level:** "Resolved Case" element. In the SIC IP service, this block must not be used.
- **C-level:** "Status" element. This block must occur exactly once.
- **D-level:** "Cancellation Details" element. This block can occur n times in the ISO definition. In the SIC IP service, this block is mandatory and only permitted once.
- **E-level:** "Modification Details" element. In the SIC IP service, this block must not be used.
- **F-level:** "Claim Non Receipt Details" element. In the SIC IP service, this block must not be used.
- **G-level:** "Statement Details" element. This block can occur 0..1 times in the ISO definition. In the SIC IP service, this block is not used and therefore not permitted.
- **H-level:** "Correction Transaction" element. This block can occur 0..1 times in the ISO definition. In the SIC IP service, this block is not used and therefore not permitted.
- **I-level:** "Resolution Related Information" element. In the SIC IP service, this block must not be used.

Figure 1: Basic message structure of the "camt.029" message

## 3 Business specifications

### 3.1 Message flow

The "camt.029" message is transmitted by the sending participant to the SIC IP service, which validates the message and always acknowledges it with a "camt.025" message. The SIC IP service then delivers the "camt.029" message to the receiving participant, who must also acknowledge it with a "camt.025" message.

Figure 2: Message flow for the IP Return Request Rejection

### 3.2 Use cases

The "Resolution of Investigation" message is used in the following use case in the SIC IP service:

Use case	Input/Output	ISO 20022
IP return request rejection	I/O	camt.029

Table 2: Use case for the ISO 20022 message type "camt.029"

With the "IP return request rejection" use case, the creditor agent can reject an IP return request received from the debtor agent.

The IP return request rejection message (camt.029) is formally validated and then forwarded immediately to the debtor agent.

#### Checking IP customer payments in the SIC IP service

It is not checked by the SIC IP service whether the referenced IP customer payment had actually previously been processed in the SIC IP service.

### 3.3 Use of references in the IP return request rejection

#### 3.3.1 Message reference

##### Message Identification "Assignment" (A-level)

The message identification is a "technical" reference which is generated by the producer of the message. In the message from the instructing participant to the SIC IP service, this is generated by the instructing participant (Assigner). The `<Id>` is used in combination with `<Assgnr>` in the SIC IP service for duplicate checking at the message level ("technical" duplicate checking).

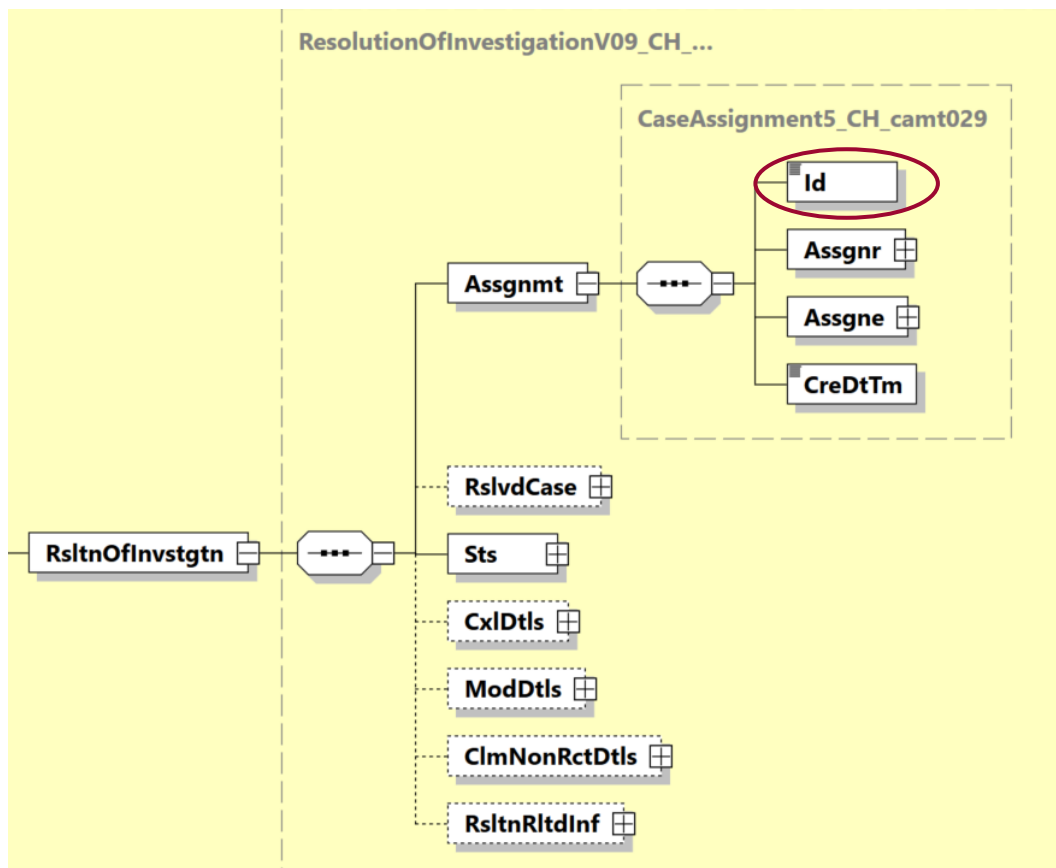

Figure 3: Message Identification (Identification)

### 3.3.2 Transaction reference

#### Identification of the IP return request rejection "Cancellation Status Identification"

The "Cancellation Status Identification" is the unique reference of the IP return request rejection. This reference is assigned by the instructing participant when the transaction is being created and is forwarded unchanged by the SIC IP service to the instructed participant. It is also used for the "operational" duplicate checking at the D-level.

Figure 4: Identification of the IP return request rejection (Cancellation Status Identification)

### 3.4 References of the original payment

At the transaction level (D-level) of the IP return request rejection message, the references from the original payment are used as described below.

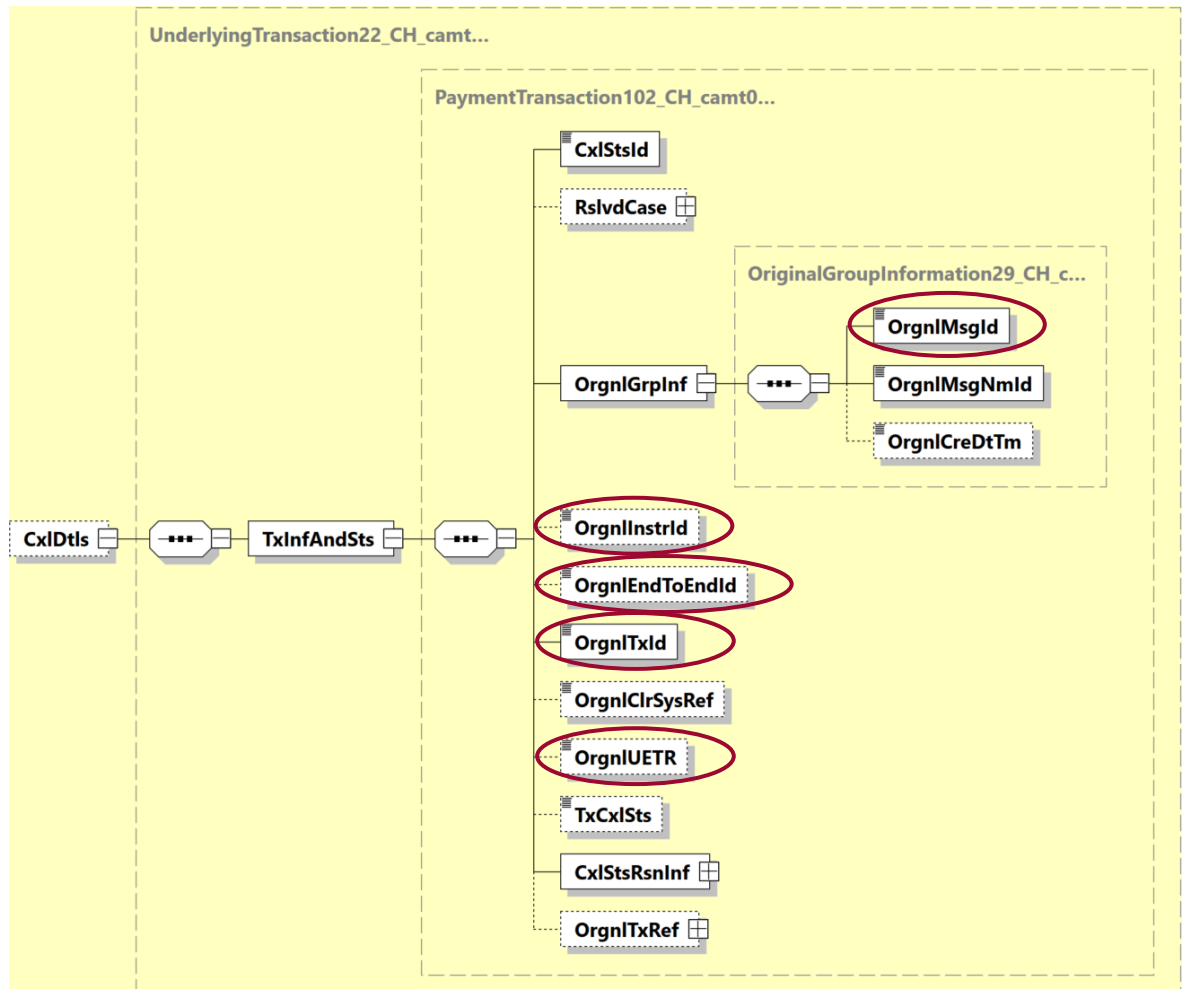

Figure 5: References of the original payment

### **3.4.1 "Original Message Identification"**

The message identification of the original payment is mandatory and must be transmitted in the *<OrgnMsgId>* element.

### **3.4.2 "Original Transaction Identification"**

The transaction reference of the original payment is mandatory and must be transmitted in the *<OrgnTxId>* element.

### **3.4.3 "Original UETR"**

If a UETR was present in the original payment, it must be specified in the IP return request rejection (not checked by the SIC IP service). The UETR is transmitted in the *<OrgnUETR>* element.

### **3.4.4 "Original Instruction Identification"**

An additional transaction identification delivered in the original payment may be transmitted in the *<OrgnInstrId>* element.

### **3.4.5 "Original End To End Identification"**

A debtor's reference supplied in the original payment can optionally be transmitted in the *<OrgnEndToEndId>* element.

### 3.5 Further information content from the original payment

Further information about the original payment is provided exclusively on the transaction level (D-level) for an IP return request rejection:

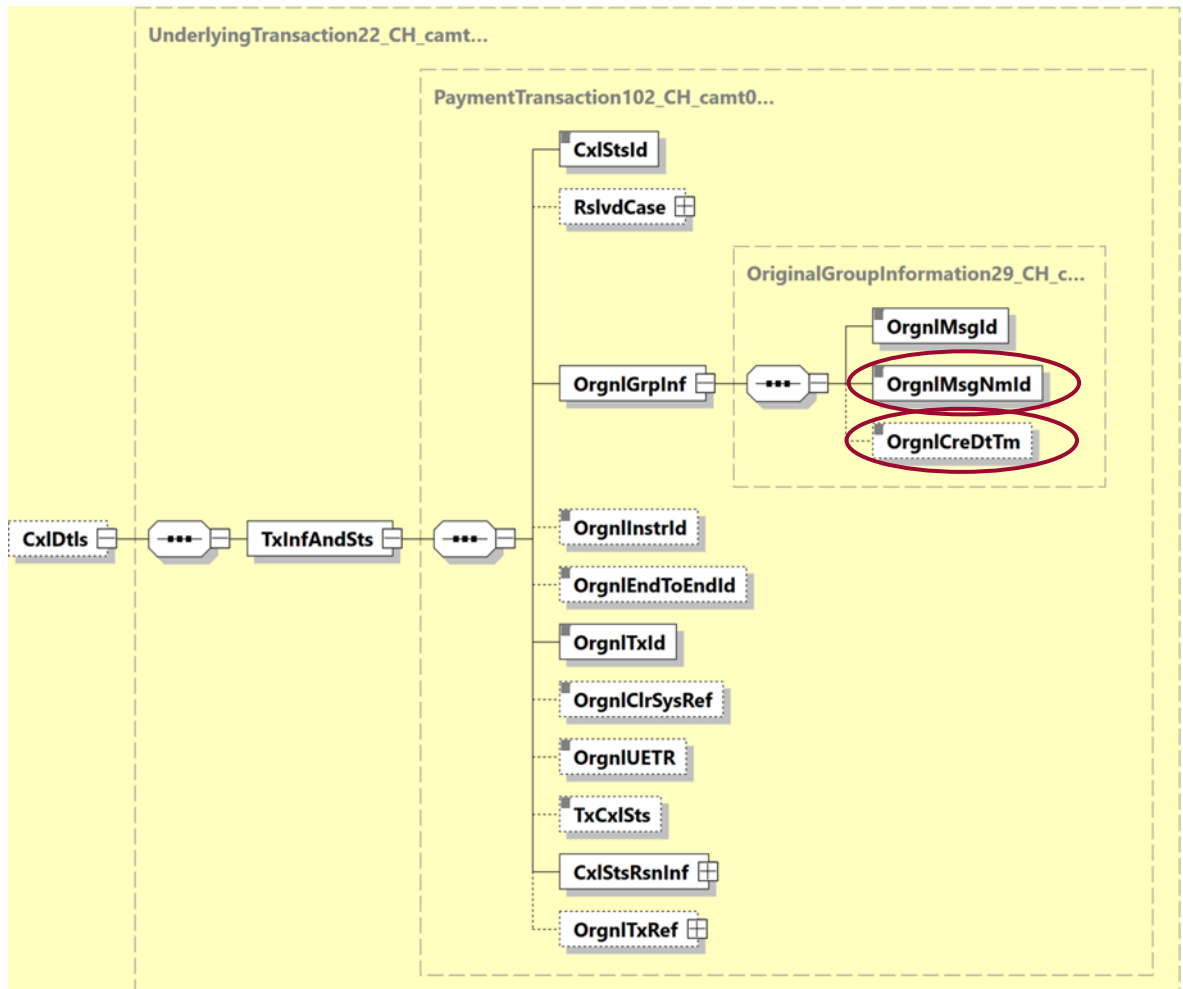

Figure 6: Elements with further information from the original payment

#### 3.5.1 "Original Message Name Identification"

The message type of the original payment must be specified and is transmitted in the **<OrgnlMsgNmId>** element at the transaction level.

#### 3.5.2 "Original Creation Date Time"

The creation date time of the original payment message can optionally be transmitted in the **<OrgnlCreDtTm>** element at the transaction level.

### **3.6 Further business-related definitions**

Information about the ISO 20022 Implementation Guidelines of the SIC RTGS service applicable to SIC/euroSIC, which underlie those of the SIC IP service, is published on the [www.iso-payments.ch](https://www.iso-payments.ch) website.

## 4 Technical specifications

### 4.1 Assignment (Assgnmt, A-level)

The "Assignment" block (A-level of the message) occurs exactly once in the message and contains the following elements:

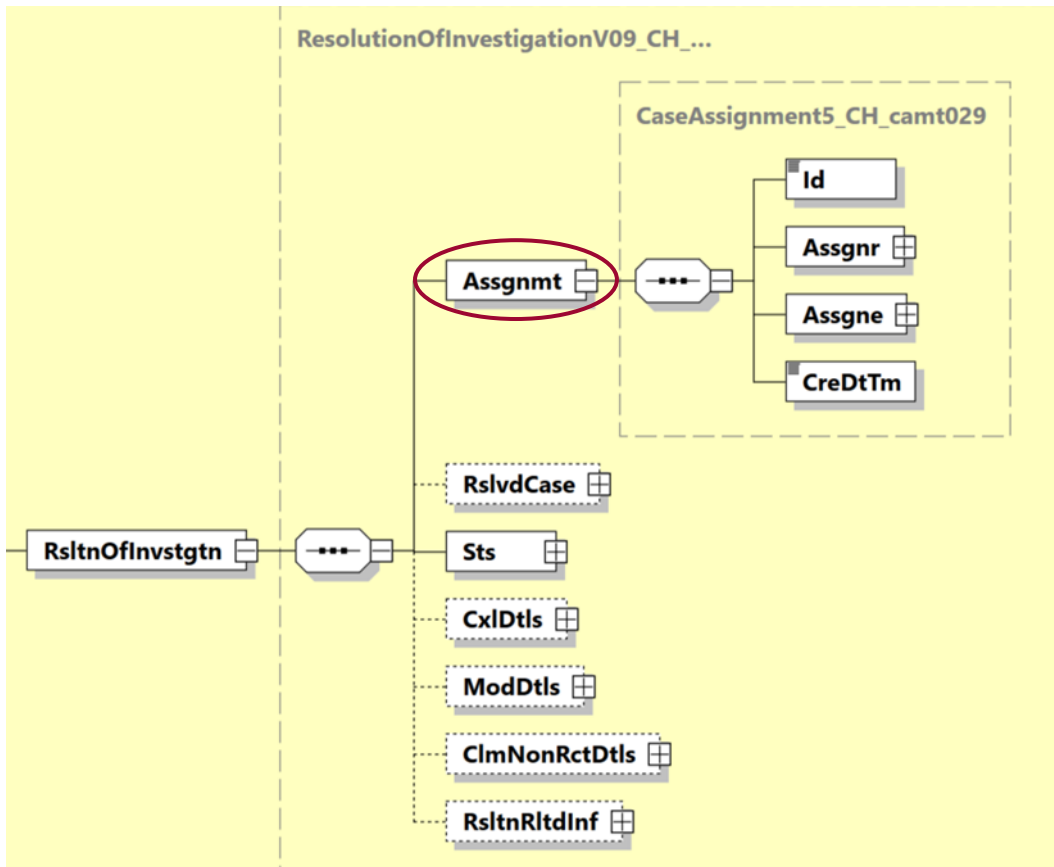

Figure 7: Assignment (Assgnmt)

The following table specifies all the elements of the A-level "Assignment" block of the "camt.029" message that are relevant to the SIC IP service.

ISO 20022 Standard			Swiss ISO 20022 Payments Standard for Instant Payments	
Message Item	XML Tag	Mult	Mult	Definition
Document +Resolution Of Investigation V09	RsltnOfInvstgtn	1..1	1..1

Note: the action instructions listed below are not verified by the SIC IP service.  "Interbank IP return request" rejection: the first occurrence must start with the value "ATR053/", followed by the reference of the IP return request of the originator bank. Further occurrences of the element may be supplied additionally as follows: a) If the LEGL value was used in the "Reason" sub-element "Code", two further repetitions may optionally be provided to specify the reason for rejection. These must each start with the value "ATR057/". Data protection requirements must be observed if the information is published. b) If the reason given in the "camt.056" of the IP return request is the value FRAD (Fraudulent origin), another ten repetitions of the element may optionally be supplied. These must each start with the value "FRAD/". By rejecting the request due to "Fraudulent origin", further information may be provided in this element which might permit the money to be legally reclaimed outside of this process. Data protection requirements must be observed if the information is published.  "Originator IP return request" rejection: the first occurrence for "Cancellation Status Reason Information" sub-element "Additional Information" must be used starting with the value "ATR072/", followed by the reference of the IP return request of the originator bank. If the reason given in the "camt.056" of the IP return request is the value AC03 (Wrong IBAN), another ten repetitions of the element may optionally be supplied. These must each start with the value "ATR078/". By rejecting the request due to "Wrong IBAN", further information may be provided in this element which might permit the money to be legally reclaimed outside of this process. Data protection requirements must be observed if the information is published.
Cancellation Details +Transaction Information And Status ++Original Transaction Reference	OrgnlTxRef	0..1	0..1	<b>Original Transaction Reference</b> Must not be used.
