

Implementation Guidelines for ISO 20022 Interbank Messages

SIC and euroSIC

Return Request Rejection (camt.029)

Version 2.2, valid from 15 November 2024

Change history

All the changes carried out in this document are listed below with the version designation, the change date, a brief description of the change and the specification of the chapters affected.

Version	Date	Description of the change	Chapter
2.2	28.02.2024	Modifications per SIC Platform Release 4.11	
		New CH schema version camt.029.001.09.ch.03.xsd (details according to the separate document "Overview and Change Log for the XML schemas")	1.4
		Modifications due to extension of return request for underlying bank payment pacs.009 (CR2024-SIC4-0006): <ul style="list-style-type: none"> Element <code>.../CxlDtls/TxInfAndSts/OrgnlGrpInf/OrgnlMsgNmId</code>: Allowed value "pacs.009" added Element <code>.../CxlDtls/TxInfAndSts/OrgnlTxRef</code>: Usage optionally allowed for underlying customer payment, not allowed for bank payment 	4.4 4.4
2.1	28.02.2023	Modifications per SIC Platform Release 4.10	
		New CH schema version camt.029.001.09.ch.02.xsd (details according to the separate document "Overview and Change Log for the XML schemas")	1.4
		Modifications due to "SEPA Credit Transfer Rulebook 2023" as well as "Increase of SEPA messages to ISO 20022 version 2019" (CR2023-SIC4-0005 and CR2023-SIC4-0003): <ul style="list-style-type: none"> Revision of the definition of Level B, D, E, F and I in chapter "ISO definitions" due to newly shared XML schema with Implementation Guideline "SEPA Investigation Resolution" (clarification of system behavior, no functional change) New chapter "Detection of the use case" due to newly shared XML schema with Implementation Guideline "SEPA Investigation Resolution" (clarification of system behavior, no functional change) Modification of the definition in chapter "Resolved Case (RslvdCase, B-level)", new block due to newly shared XML schema with Implementation Guideline "SEPA Investigation Resolution" (must not be used for rejection of return requests) Element <code>.../CxlDtls/TxInfAndSts/CxlStsRsnInf/AddtlInf</code>: Modification of code values due to revised SEPA attributes ("ATR053/" replaces "ATR7", "ATR057/" replaces "ATR6", "FRAD/" replaces "FRAD", "ATR072/" replaces "AT51", "ATR078/" replaces "AT57") Revision of the definition of Level E, F, G, H and I (analogous to chapter 2, clarification of system behavior, no functional change) 	2 3.1.1 4.2 4.4 4.5, 4.6, 4.7, 4.8, 4.9
2.0	17.12.2021	Complete revision due to update of ISO 20022 version 2019	All

		New chapter "Introduction" (replaces the previous chapter "Overview of the documentation structure" and appendices)	1
		New ISO 20022 schema version	1, 2
		Revision of "ISO definitions" due to changed message construction	2
		Deletion of use case "SEPA return request rejection" and change of use case description for "Return request rejection" (replacement of "SEPA Return request rejection" by "Return request rejection" in euroSIC)	3.1
		Previous chapter "Distinctions between the various types of return request rejection" removed.	-
		Complete revision of "Technical specifications for the RTGS systems"; Details as per the separate document "Delta Commentary camt.029"	4
		New chapters for the "Modification Details (ModDtIs, E-level)" and "Claim Non Receipt Details (ClnNonRctDtIs, F-level)" blocks	4.5, 4.6
1.8	22.02.2021	Last edition based on previous ISO 20022 version status	All
1.0	16.05.2014	First edition	All

1 Introduction

1.1 Overview of the documentation structure

The Implementation Guidelines consist of a base document with general information concerning all message types and various module documents – one each per ISO 20022 message type, e.g. this document for the message type "camt.029" – with message-specific information, including information on the application-specific handling of individual elements. They specify the messages to be submitted to and delivered from the RTGS systems SIC and euroSIC in the ISO 20022 message standard.

These Implementation Guidelines are modular in structure:

- The base document contains general information applying to all messages.
- The module documents – one for each ISO 20022 message type – contain message-specific information, including information on the application-specific handling of certain elements.
- For each Implementation Guideline, an XML schema (XSD) and generic XML sample messages will be published.

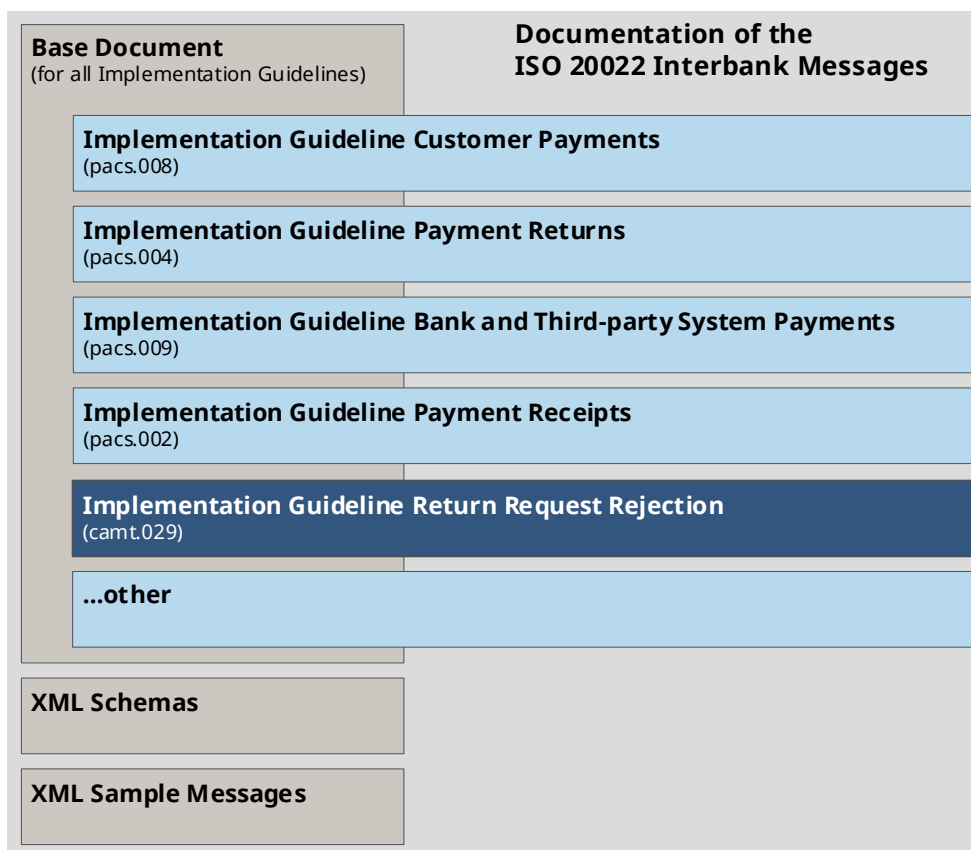

Figure 1: Documentation structure for message type "camt.029"

1.2 Target audience

The "Implementation Guidelines for ISO 20022 Interbank Messages" are addressed to all participants of the Swiss RTGS systems SIC and euroSIC.

1.3 Change control

All modifications made to this document are listed in the change history (Table 1) showing the version, the date of the change, a brief description and references to the chapters concerned.

1.4 XML schema

The XML schema for "camt.029" for the RTGS systems is published on the www.iso-payments.ch website:

- ***camt.029.001.09.ch.03.xsd***

It should preferably be opened using specialized XML software.

1.5 Validation portal

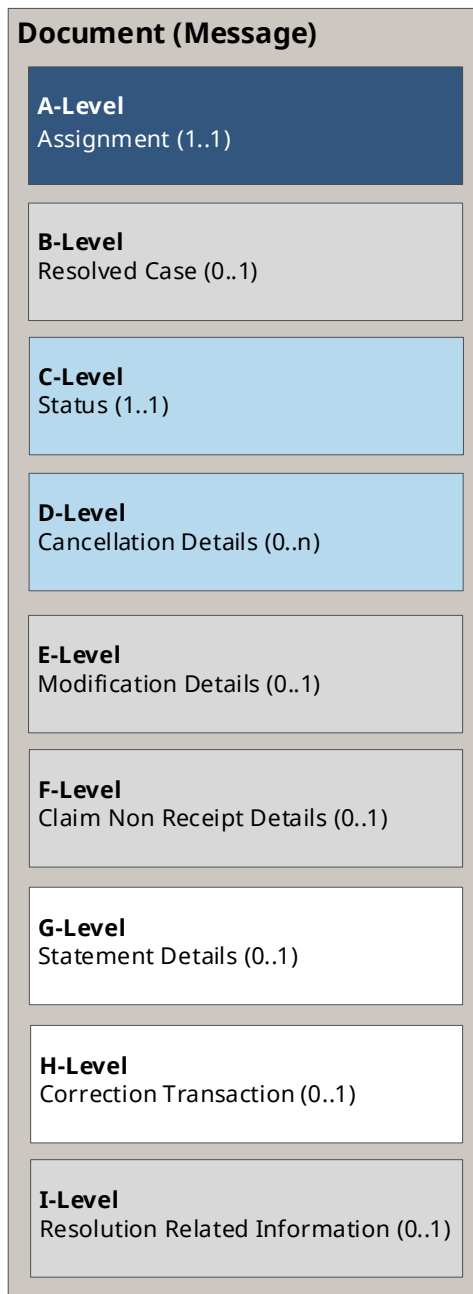

After registration, users can upload their own messages to the SIC & euroSIC Validation Portal Interbank Messages (validation.iso-payments.ch/SIC4) and validate them against these Implementation Guidelines.

1.6 Reference documents

Additional information on the Implementation Guidelines can be found in the reference documents listed in the base document.

2 ISO definitions

The "Resolution of Investigation" message (camt.029) is sent from the creditor agent (the instructed participant) to the RTGS systems and from the RTGS systems to the debtor agent (the instructing participant) in order to reject a received return request. The "Resolution of Investigation" message is used on the basis of the ISO 20022 XML schema "camt.029.001.09".

The "camt.029" message is essentially structured as follows:

- **A-level:** "Assignment" element.
This block must occur exactly once.
- **B-level:** "Resolved Case" element.
This block must not be used for the "Return request rejection" use case.
- **C-level:** "Status" element.
This block must occur exactly once.
- **D-level:** "Cancellation Details" element.
This block can occur n times in the ISO definition. In the RTGS systems, this block is only permitted once and must be used for the "Return request rejection " use case.
- **E-level:** "Modification Details" element.
This block must not be used for the "Return request rejection" use case.
- **F-level:** "Claim Non Receipt Details" element.
This block must not be used for the "Return request rejection" use case.
- **G-level:** "Statement Details" element.
This block can occur 0..1 times in the ISO definition. In the RTGS systems, this block is not used and therefore not permitted.
- **H-level:** "Correction Transaction" element.
This block can occur 0..1 times in the ISO definition. In the RTGS systems, this block is not used and therefore not permitted.
- **I-level:** "Resolution Related Information" element.
This block must not be used for the "Return request rejection" use case.

Figure 2: Basic message structure of the "camt.029" message

3 Business specifications for the RTGS systems

3.1 Use cases

The "Resolution of Investigation" message is used in the following use case in the RTGS systems:

Use case	Input/Output	ISO 20022
Return request rejection	I/O	camt.029

Table 2: Use case for the ISO 20022 message type "camt.029"

With the use case "Return request rejection", the creditor agent can reject a return request received from the debtor agent. This use case can be used both for system-internal rejection requests between direct system participants and for forwarding cross-system rejection requests to or from other networks. In euroSIC, this use case is also used for rejection of return requests for a "SEPA credit transfer" in traffic with the SECB.

The return request rejection message (camt.029) is formally validated and then forwarded immediately to the debtor agent.

Checking the referenced payment through the RTGS system

The RTGS systems do not check whether or not the referenced payment was actually processed in the RTGS systems.

3.1.1 Detection of the use case

The unique detection of the use case within the message "Resolution of Investigation" (camt.029) is done via a code value according to ISO 20022 External Code Set

"ExternalInvestigationExecutionConfirmation1Code" in the element *.../Sts/Conf*:

Use case	Code value	Code name
Return request rejection	RJCR	Rejected Cancellation Request

Table 3: Code values for detection of the use cases in the «Confirmation» element

3.2 Use of references

The mandatory references described below must be used in the use case "Return request rejection".

3.2.1 Message reference

Message Identification "Assignment" (A-level)

The message identification is a "technical" reference which is generated by the producer of the message. In the message from the instructing participant to the RTGS systems, this is generated by the instructing participant (Assigner). The `<Id>` is used in combination with `<Assgnr>` in the RTGS systems for duplicate checking at the message level ("technical" duplicate checking).

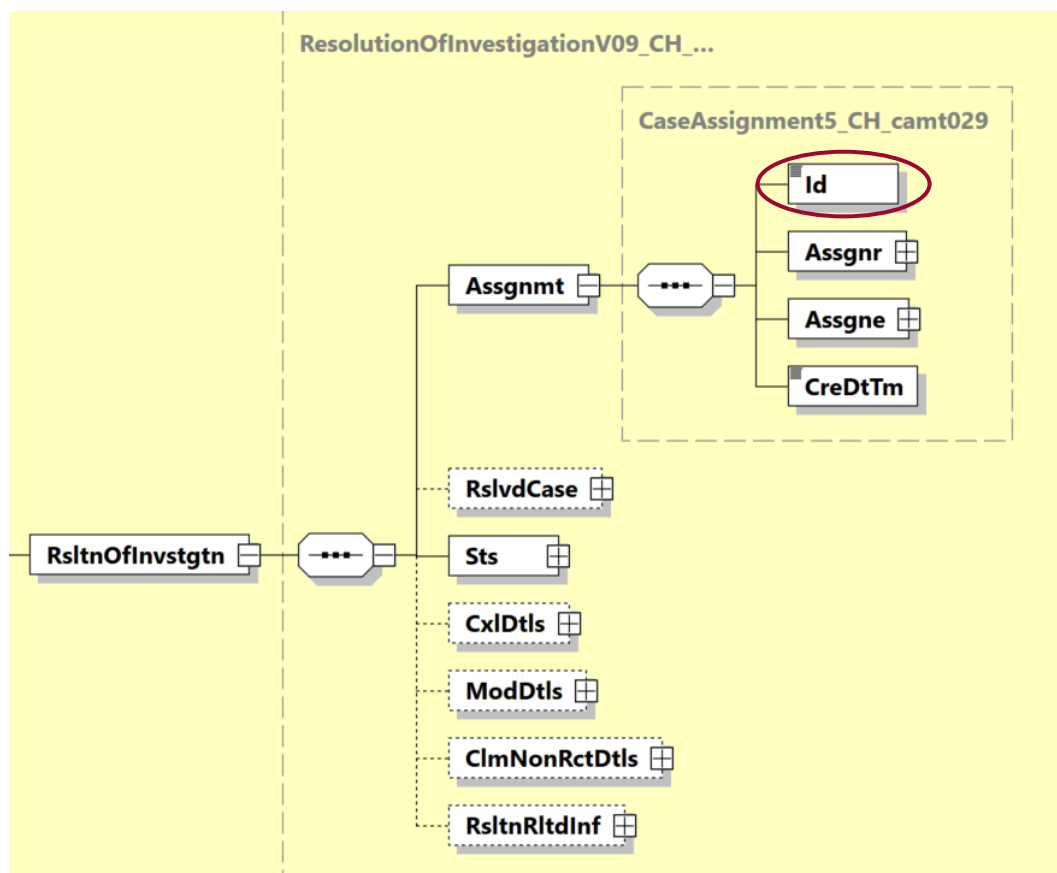

Figure 3: Message Identification

3.2.2 Other references

Identification of the return request rejection "Cancellation Status Identification"

The "Cancellation Status Identification" is the unique reference of the return request rejection. This reference is assigned by the instructing participant when the transaction is being created and is forwarded unchanged by the RTGS systems to the instructed participant. It is also used for the "operational" duplicate checking at the D-level.

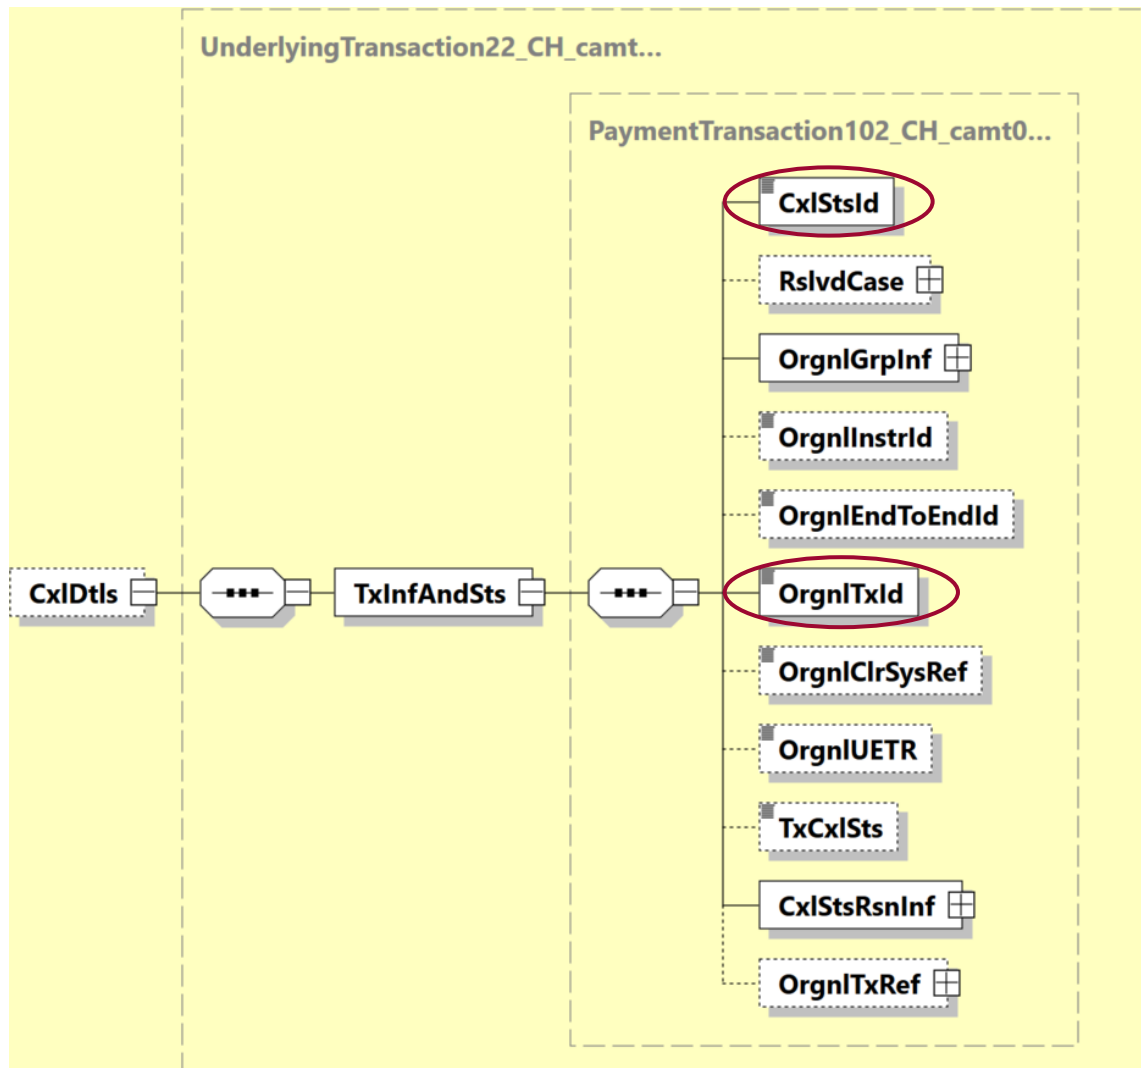

Figure 4: Identification of the return request rejection and transaction identification of the original transaction

Original Transaction Identification

The transaction reference number for the original payment must be provided and copied into the **<OrgnlTxId>** element (see Figure 4).

Information content in the original message

Information from the original payment must be sent in the "TxInfAndSts" and "OrgnlTxRef" elements, the provision of the "OrgnlTxRef" part is optional:

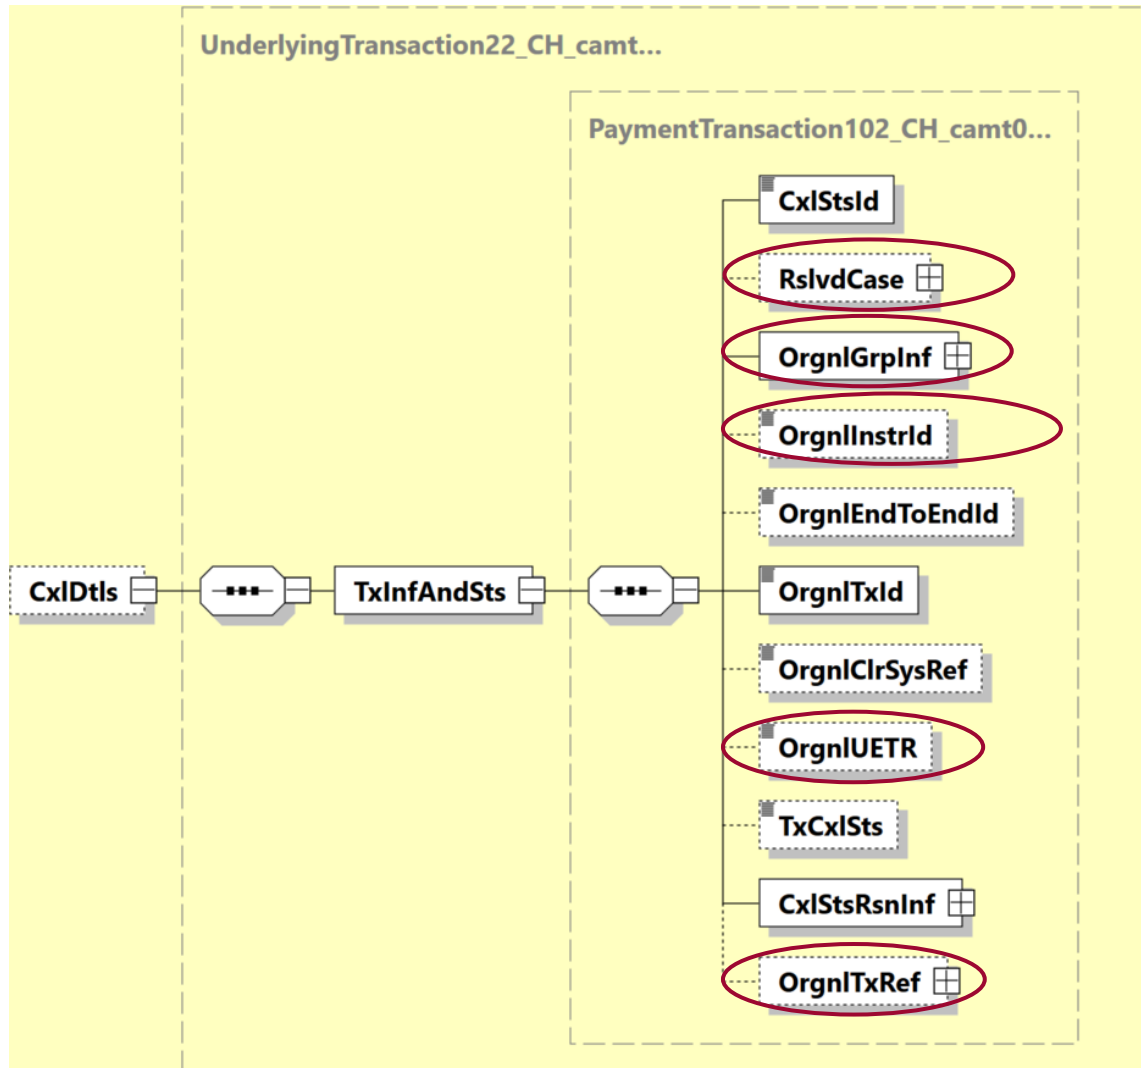

Figure 5: Elements for information from the original message

The D-level contains both elements from the original payment and elements relating to the return request rejection itself.

If the "Original Transaction Reference" element is used, it must contain an exact copy of the same elements from the original payment.

3.3 Further business specifications

Further business specifications can be found in the base document.

4 Technical specifications for the RTGS systems

4.1 Assignment (Assgnmt, A-level)

The "Assignment" block (A-level of the message) occurs exactly once in the message and contains the following elements:

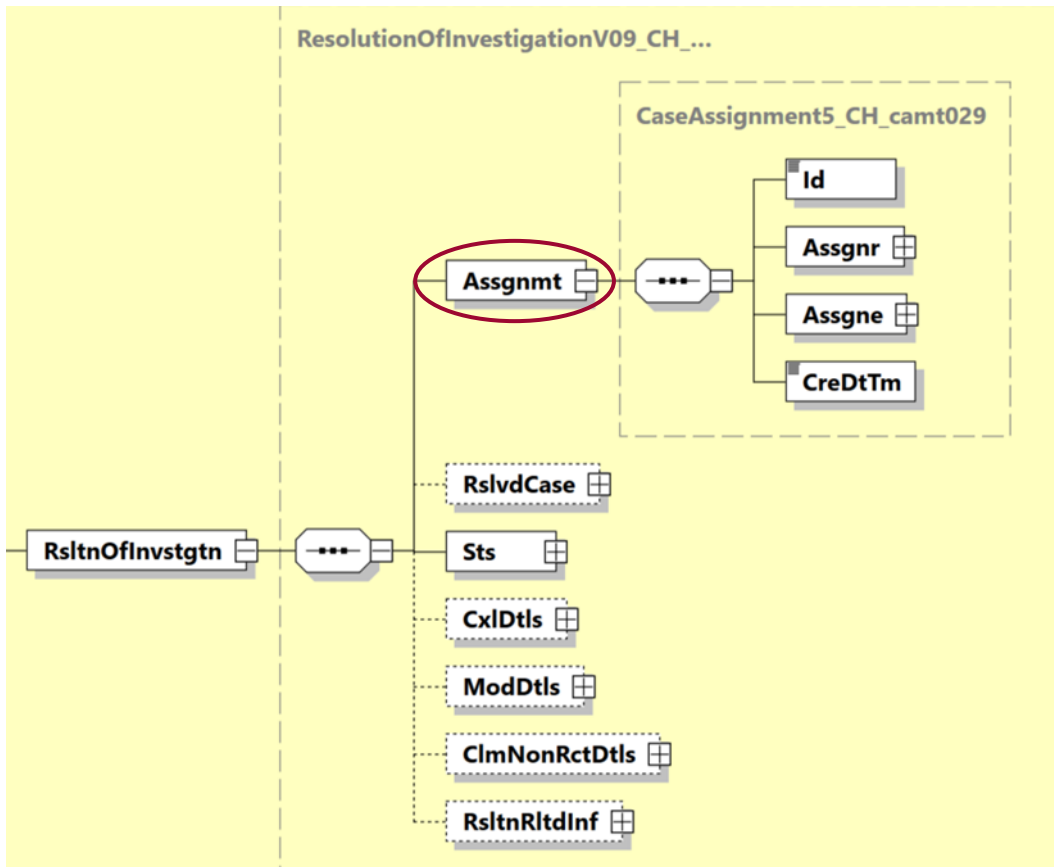

Figure 6: Assignment (Assgnmt)

The following table specifies all the elements of the A-level "Assignment" block of the "camt.029" message that are relevant to the RTGS systems.

ISO 20022 Standard			Swiss ISO 20022 Payments Standard

Cancellation Details +Transaction Information And Status ++Cancellation Status Reason Information +++Additional Information	AddtlInf	0..n	0..13	Additional Information Must be used. Note: the action instructions listed below are not verified by the RTGS platform. "Interbank return request" rejection: the first occurrence must start with the value "ATR053/", followed by the reference of the return request of the originator bank. Further occurrences of the element may be supplied additionally as follows: a) If the LEGL value was used in the "Reason" sub-element "Code", two further repetitions may optionally be provided to specify the reason for rejection. These must each start with the value "ATR057/". Data protection requirements must be observed if the information is published. b) If the reason given in the "camt.056" of the return request is the value FRAD (Fraudulent origin), another ten repetitions of the element may optionally be supplied. These must each start with the value "FRAD/". By rejecting the request due to "Fraudulent origin", further information may be provided in this element which might permit the money to be legally reclaimed outside of this process. Data protection requirements must be observed if the information is published. "Originator return request" rejection: the first occurrence for "Cancellation Status Reason Information" sub-element "Additional Information" must be used starting with the value "ATR072/", followed by the reference of the return request of the originator bank. If the reason given in the "camt.056" of the return request is the value AC03 (Wrong IBAN), another ten repetitions of the element may optionally be supplied. These must each start with the value "ATR078/". By rejecting the request due to "Wrong IBAN", further information may be provided in this element which might permit the money to be legally reclaimed outside of this process. Data protection requirements must be observed if the information is published.
Cancellation Details +Transaction Information And Status ++Original Transaction Reference	OrgnlTxRef	0..1	0..1	Original Transaction Reference The element may optionally be supplied in the case of an underlying customer payment (value "pacs.008" in the element <OrgnlMsgNmId>). In the case of bank payments (value "pacs.009" in the element <OrgnlMsgNmId>), the element must not be used. If used, the sub-elements of <OrgnlTxRef> used must contain exact copies of the data from the corresponding elements of the original payment (is not verified by the RTGS platform). All sub-elements from <OrgnlTxRef> are only checked by the RTGS platform against the schema definition.
