

Implementation Guidelines for ISO 20022 Interbank Messages

euroSIC

SEPA Value Date Adjustment Request (camt.087)

Version 2.1, valid from 21 November 2025

Change history

All the changes carried out in this handbook are listed below with the version designation, the change date, a brief description of the change and the specification of the chapters affected.

Version	Date	Description of the change	Chapter
2.1	28.02.2025	Modifications per SIC Platform Release 4.12	
		Modifications of "Technical specifications for the RTGS services": Addition of a reference to the base document due to changed specifications for "ISODateTime" (CR2025-SIC4-0002) for the following element: <ul style="list-style-type: none"> .../Assgnmt/CreDtTm 	4.1
2.0	28.02.2023	Modifications per SIC Platform Release 4.10	
		Complete revision due to update of ISO 20022 version 2019 (CR2023-SIC4-0003)	All
		New chapter "Introduction" (replaces the previous chapter "Overview of the documentation structure" and appendices)	1
		New ISO 20022 schema version	1, 2
		Revision of the chapter "ISO definitions" (term "block" replaced by "level", editorial change without functional impact)	2
		Revision of the entire chapter "Business specifications for the RTGS services" (editorial change without functional impact)	3
		Renaming of all sub-chapters under "Technical specifications for the RTGS services" (term "block" replaced by "level", editorial change without functional impact)	4
		Complete revision of "Technical specifications for the RTGS services"; Details as per the separate document "Delta Commentary camt.087" (only in English)	4
1.1	28.02.2020	Last version based on the previous ISO20022 version status	
1.0	20.03.2019	First edition

1 Introduction

1.1 Overview of the documentation structure

The Implementation Guidelines (IG) consist of a base document with general information concerning all message types and various module documents – this document is for the message type "camt.087" – with message-specific information, including information on the application-specific handling of individual elements. They specify the messages to be submitted to and delivered from the RTGS services SIC and euroSIC in the ISO 20022 message standard.

These Implementation Guidelines are modular in structure:

- The base document contains general information applying to all messages.
- The module documents contain message-specific information, including information on the application-specific handling of certain elements.
- An XML schema (XSD) and generic XML sample messages are published for each separate Implementation Guideline.

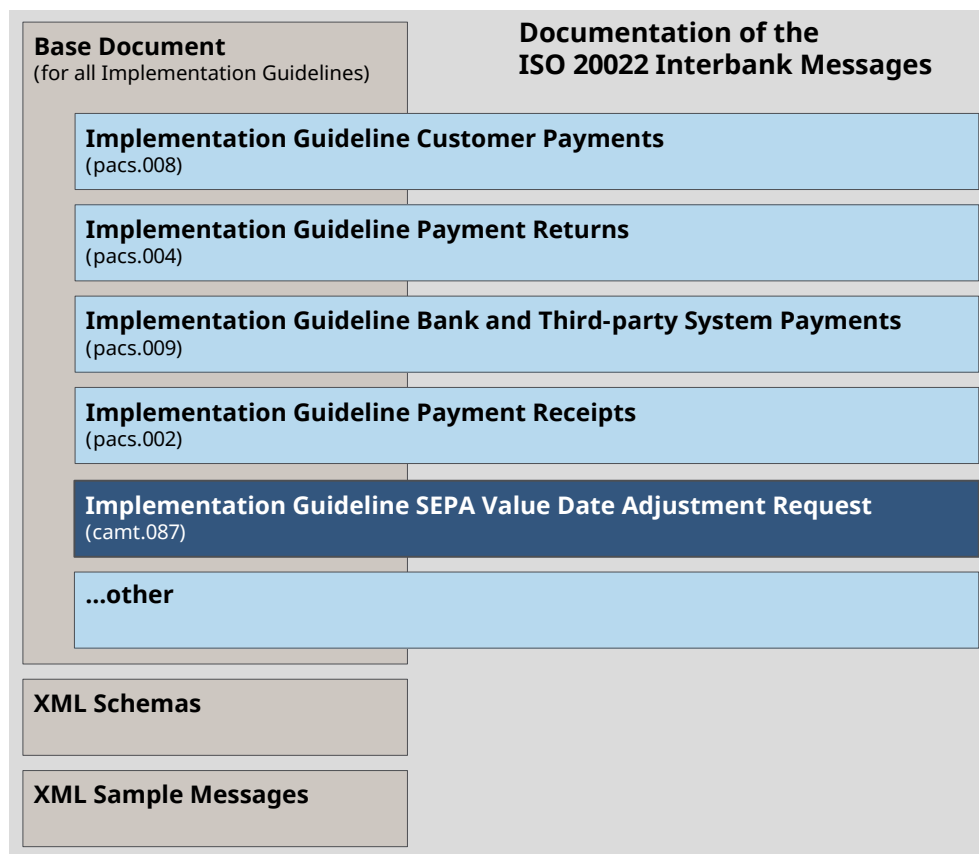

Figure 1: Documentation structure for message type "camt.087"

1.2 Target audience

The "Implementation Guidelines for ISO 20022 Interbank Messages" are addressed to all participants of the Swiss RTGS services SIC and euroSIC.

1.3 Change control

All modifications made to this document are listed in the change history showing the version, the date of the change, a brief description and references to the chapters concerned.

1.4 XML schema

The XML schema for "camt.087" is published on the website www.iso-payments.ch:

- ***camt.087.001.06.ch.01.xsd***

It should preferably be opened using specialized XML software.

1.5 Validation portal

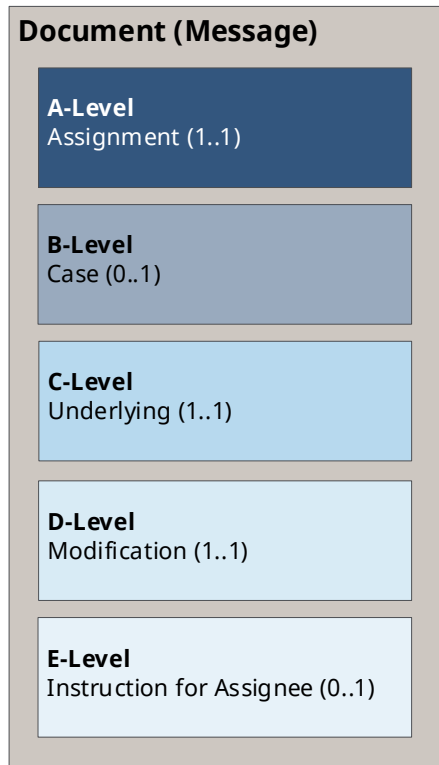

After registration, users can upload their own messages to the SIC & euroSIC Validation Portal Interbank Messages (validation.iso-payments.ch/SIC4) and validate them against these Implementation Guidelines.

1.6 Reference documents

Additional information on the Implementation Guidelines can be found in the reference documents listed in the base document.

2 ISO definitions

The "Request To Modify Payment" message (camt.087) is sent from the debtor agent (the instructing participant) to the RTGS services and from the RTGS services to the creditor agent (the instructed participant) in order to request the correction of the value date. It is used on the basis of the ISO 20022 XML schema "camt.087.001.06".

The "camt.087" message is essentially structured as follows:

- **A-level:** "Assignment" element. This block must occur exactly once.
- **B-level:** "Case" element. This block can occur 0..1 times in the ISO definition. In the RTGS services, this block must occur once (1..1).
- **C-level:** "Underlying" element. This block must occur exactly once.
- **D-level:** "Modification" element. This block must occur exactly once.
- **E-Level:** "Instruction for Assignee" element. This block can occur 0..1 times in the ISO definition. In the RTGS services this block can be used optionally.

Figure 2: Basic message structure of the "camt.087" message

3 Business specifications for the RTGS services

3.1 Use case

The "Request To Modify Payment" message is used in the following use case in the RTGS services:

Use case	Input/Output	ISO 20022
SEPA Value Date Adjustment Request	I/O	camt.087

Table 2: Use case for the ISO 20022 message type "camt.087"

With the "SEPA Value Date Adjustment Request" use case, the debtor agent requests the creditor agent to adjust the value date of an earlier SEPA payment (pacs.008) that has already been credited to the creditor.

If a creditor does not receive an expected amount credited to his account by the expected value date, he usually contacts the debtor. The debtor may then instruct his institution to have the value date of the credit adjusted. In this case, this use case serves the purpose of the debtor agent to formally request the value date of this SEPA payment to be adjusted from the creditor agent. The creditor agent is obliged to react to the "SEPA Value Date Adjustment Request" with a "SEPA investigation resolution" (camt.029).

"SEPA Value Date Adjustment Request" submitted by the participant to euroSIC

The "SEPA Value Date Adjustment Request" message (camt.087) from the participant (debtor agent) is formally validated and then forwarded immediately via system manager SECB Swiss Euro Clearing Bank to the creditor agent.

"SEPA Value Date Adjustment Request" received by SECB from the SEPA area to euroSIC

The "SEPA Value Date Adjustment Request" message (camt.087) from the debtor agent is formally validated and then forwarded immediately to the participant (creditor agent).

Checking the referenced customer payment by the RTGS service

The RTGS services do not check whether the referenced customer payment was actually processed in the RTGS services.

3.2 Use of references

3.2.1 Message reference

Message Identification "Assignment" (A-level)

The message identification is a "technical" reference which is generated by the producer of the message. In a message from the instructing participant to the RTGS services, this is generated by the instructing participant (Assigner). The `<Id>` and `<Assgnr>` elements are used together in the RTGS services for duplicate checking at message level ("technical" duplicate checking).

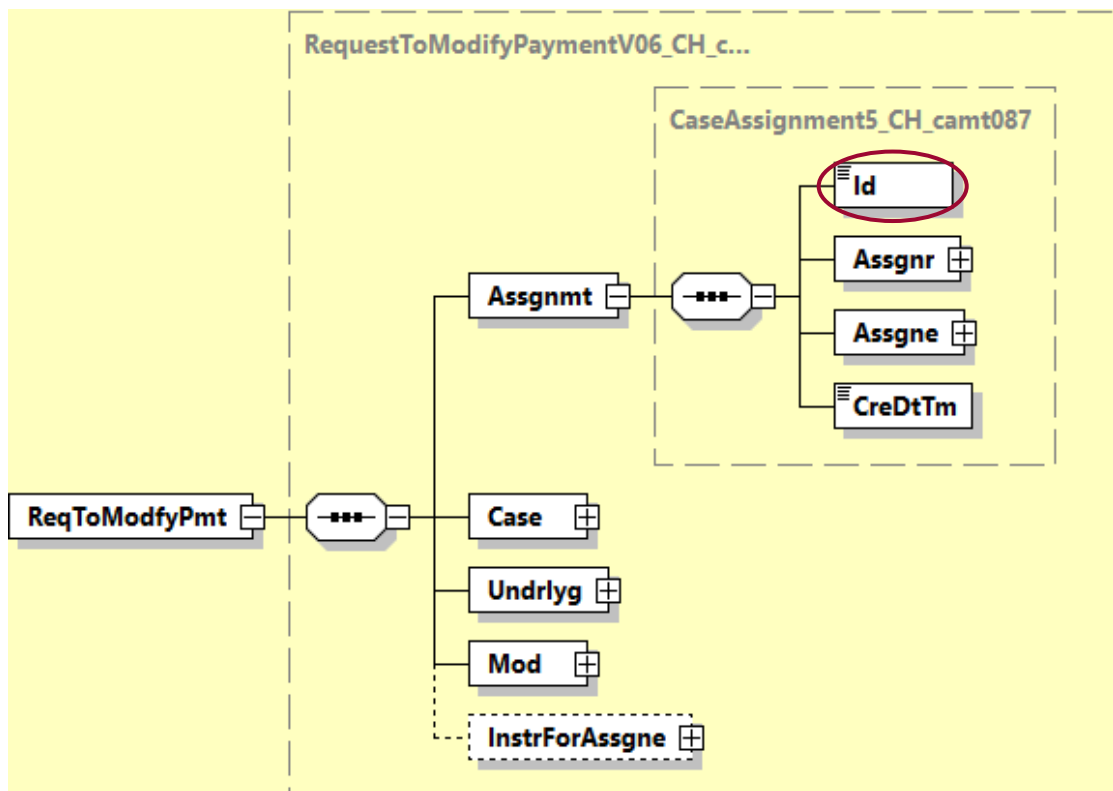

Figure 3: Message Identification (Assignment/Identification)

3.2.2 Other references

Identification of the request "Case Identification" (B-level)

The identification of the "SEPA Value Date Adjustment Request" is the unambiguous reference of the request. This reference is assigned by the instructing participant when the transaction is being set up and is forwarded unchanged by the RTGS services to the instructed participant. It is also used for the "operational" duplicate checking at the B-level.

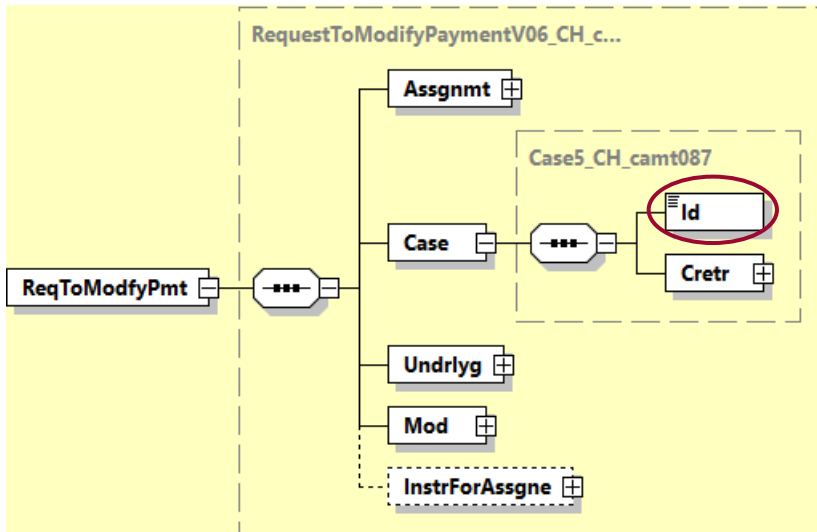

Figure 4: Identification of the request (Case/Identification)

Reference of the original payment "Original Transaction Identification (C-level)"

The transaction reference of the original payment must be provided in the <OrgnlTxId> element.

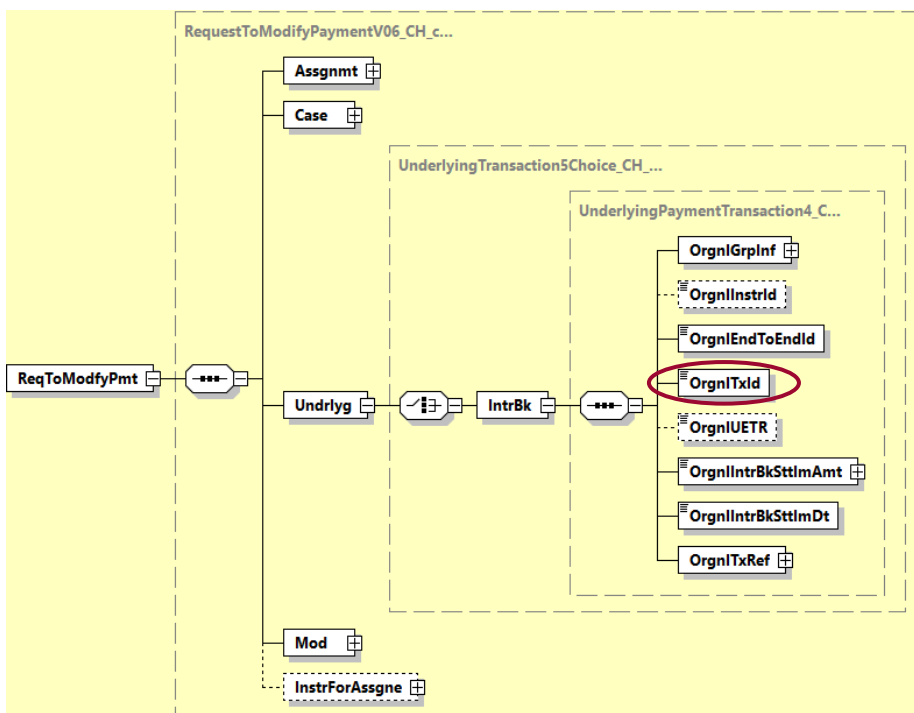

Figure 5: Transaction reference of the original payment (Original Transaction Identification)

Further mandatory information content of the original payment

Further mandatory information of the original payment must be supplied within the elements "IntrBk" and "OrgnlTxRef":

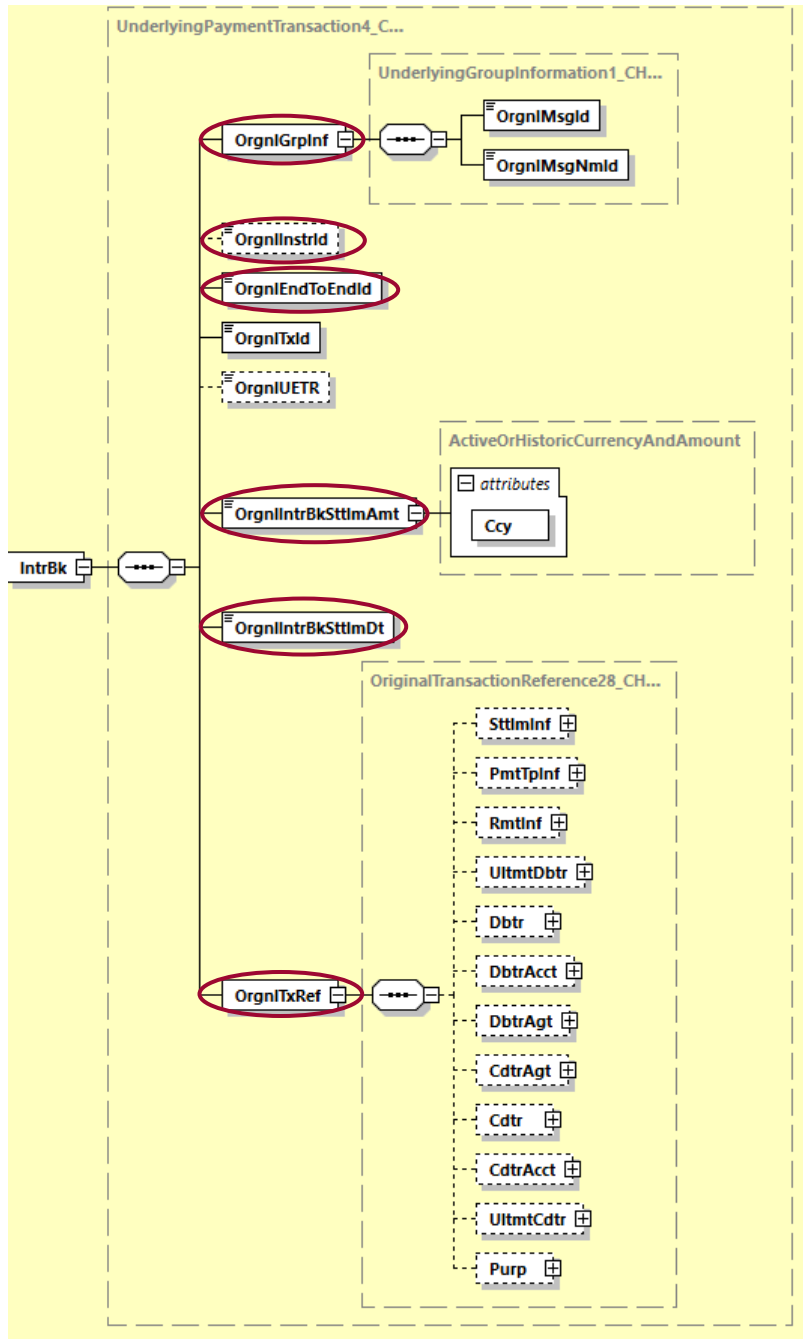

Figure 6: Further elements for information from the original payment

In the "Original Transaction Reference" element at the original payment level, an exact copy of the same elements from the original payment must be supplied.

3.3 Further business-related definitions

Further business-related definitions can be found in the base document.

4 Technical specifications for the RTGS services

4.1 Assignment (Assgnmt, A-level)

The "Assignment" block (A-level of the message) occurs exactly once and contains the following elements:

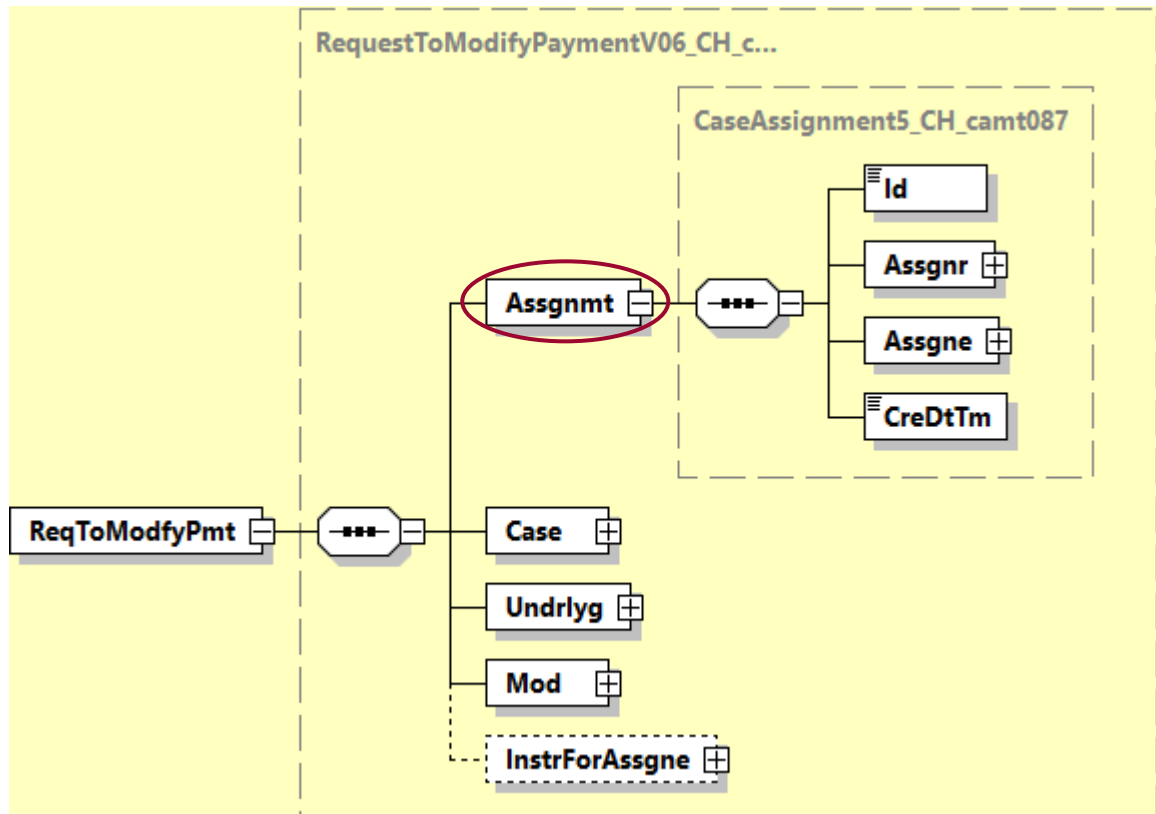

Figure 7: Assignment (Assgnmt)

The following table specifies all the elements of the A-level "Assignment" in the "camt.087" message that are relevant to the RTGS services.

ISO 20022 Standard			Swiss ISO 20022 Payments Standard
