

# **Implementation Guidelines for ISO 20022 Interbank Messages**

euroSIC

SEPA Value Date Adjustment Request (camt.087)

Version 1.1, with effect from 20 November 2020

## General notes

---

SIX Interbank Clearing reserves the right to modify this document, as the need arises, at any time without prior notice.

SIX Interbank Clearing reserves all rights for this document including the rights of photomechanical reproduction, storage on electronic media and the translation into foreign languages.

Although great care has been taken in the compilation and preparation of this work to ensure accuracy, errors and omissions cannot be entirely ruled out. SIX Interbank Clearing cannot be held liable for any decision made or action taken in reliance on the information in this document or for any consequential, special or similar damages.

If you detect any errors in this document or have any ideas or suggestions for improvements we would be extremely grateful if you would notify these by e-mail to **[operations.sic@six-group.com](mailto:operations.sic@six-group.com)**.

## About this document

---

### Target audience

The "Implementation Guidelines for ISO 20022 Interbank Messages" are addressed to all participants of the Swiss RTGS systems SIC and euroSIC.

### Purpose

The Implementation Guidelines consist of a base document with general information concerning all message types and various module documents – one each per ISO 20022 message type, e.g. this document for the message type "camt.087" – with message-specific information, including information on the application-specific handling of individual elements. They specify the messages to be submitted to and delivered from the RTGS systems SIC and euroSIC in the ISO 20022 message standard.

### Amendment control

All the amendments carried out on this document are listed in an amendment record table showing the version, the date of the amendment, a brief amendment description and a statement of the sections concerned.

### Associated documents

Supplementary information to the Implementation Guidelines can be found in the reference documents listed in the Base Document.

## Amendment control

All the amendments carried out on this document are listed below, with the version, the date of the amendment, a brief amendment description and a statement of the sections concerned.

Version	Date	Amendment description	Section(s)
1.1	28.02.2020	Section "Other references" corrected.	3.2.2
		The message type of the message in question, to which the message transfer relates, must be specified in element «Original Message Name Identification».	4.3
1.0	20.03.2019	First edition	all

# 1 Overview of documentation structure

These Implementation Guidelines are modular in structure:

- The base document contains general information applying to all messages.
- The module documents – one for each ISO 20022 message type – contain message-specific information, including information on the application-specific handling of certain elements.
- For each Implementation Guideline, an XML schema (XSD) and generic XML sample messages will be published.

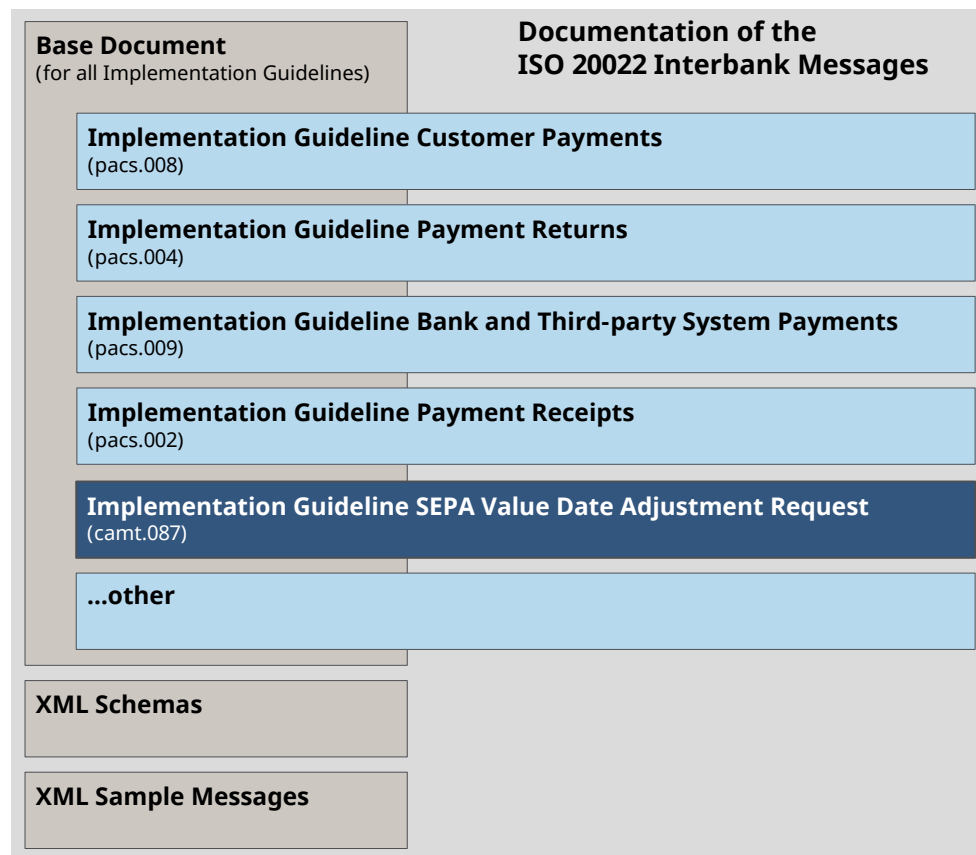

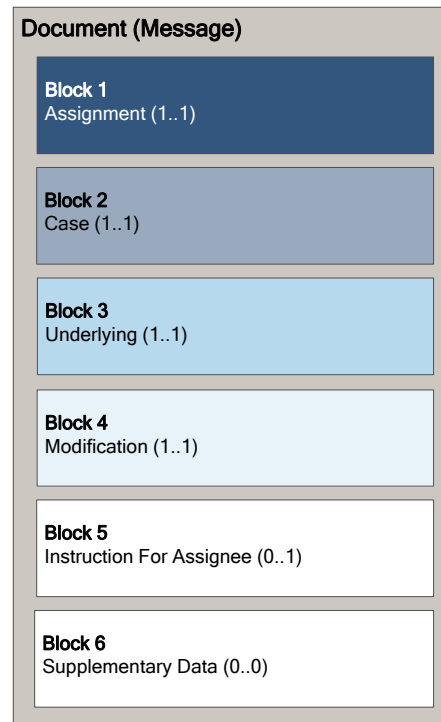

Figure 1: Documentation structure

## 2 ISO definitions

The "Request To Modify Payment" message (camt.087) is sent from the debtor agent (the instructing participant) to the RTGS systems and from the RTGS systems to the creditor agent (the instructed participant) in order to request the correction of the value date . It is used on the basis of the ISO 20022 XML schema "camt.087.001.05".

The "camt.087" message is essentially structured as follows:

- **Block 1:** "Assignment" element. This block must occur exactly once.
- **Block 2:** "Case" element. This block must occur exactly once.
- **Block 3:** «Underlying» element. This block must occur exactly once.
- **Block 4:** «Modification» element. This block must occur exactly once.
- **Block 5:** «Instruction for Assignee» element. This block can occur once.
- **Block 6:** «Supplementary Data» element. In the RTGS systems this block is not used.

Figure 2: Basic message structure of the "camt.087" message

## 3 Business specifications for the RTGS systems

### 3.1 Use case

The "SEPA Value Date Adjustment Request" message (camt.087) is used in the following situation in the RTGS systems:

Use case	Input/Output	ISO 20022
SEPA Value Date Adjustment Request	I/O	camt.087

Table 1: Situations where the "camt.087" message is used

With the "SEPA Value Date Adjustment Request" use case, the debtor agent asks the creditor agent the value date of an earlier SEPA payment (pacs.008) that has been credited too late.

#### **"SEPA Value Date Adjustment Request" message submitted from the participant to euroSIC**

The "SEPA Value Date Adjustment Request" message (camt.087) from the participant (debtor agent) is formally validated and then forwarded immediately via system manager SECB Swiss Euro Clearing Bank to the creditor agent.

The creditor agent is obliged to react to the "SEPA Value Date Adjustment Request" message with a "SEPA investigation resolution" (camt.029.001.08).

It is not checked by the RTGS systems whether the referenced customer payment was actually processed in the RTGS systems.

#### **"SEPA Value Date Adjustment Request" message received by SECB from the SEPA area to euroSIC**

The "SEPA Value Date Adjustment Request" message (camt.087) from the debtor agent is formally validated and then forwarded immediately to the participant (creditor agent).

Note: If a creditor is not credited on its account at the expected date, then it will usually contact the debtor. The debtor can then instruct the debtor agent to request an adjustment of the value date from the creditor agent with the "SEPA Value Date Adjustment Request" use case. If the delay was not caused by the creditor agent it is entitled to request interest compensation from the debtor agent.

## 3.2 Use of references

In the "SEPA Value Date Adjustment Request" the mandatory references described below are used.

### 3.2.1 Message reference

#### Message Identification «Assignment» (Block 1)

The message identification is a "technical" reference which is generated by the producer of the message. In a message from the instructing participant to the RTGS systems, this is generated by the instructing participant (Assigner). The *<Id>* in combination with *<Assgnr>* is used in the RTGS systems for duplicate checking at message level ("technical" duplicate checking).

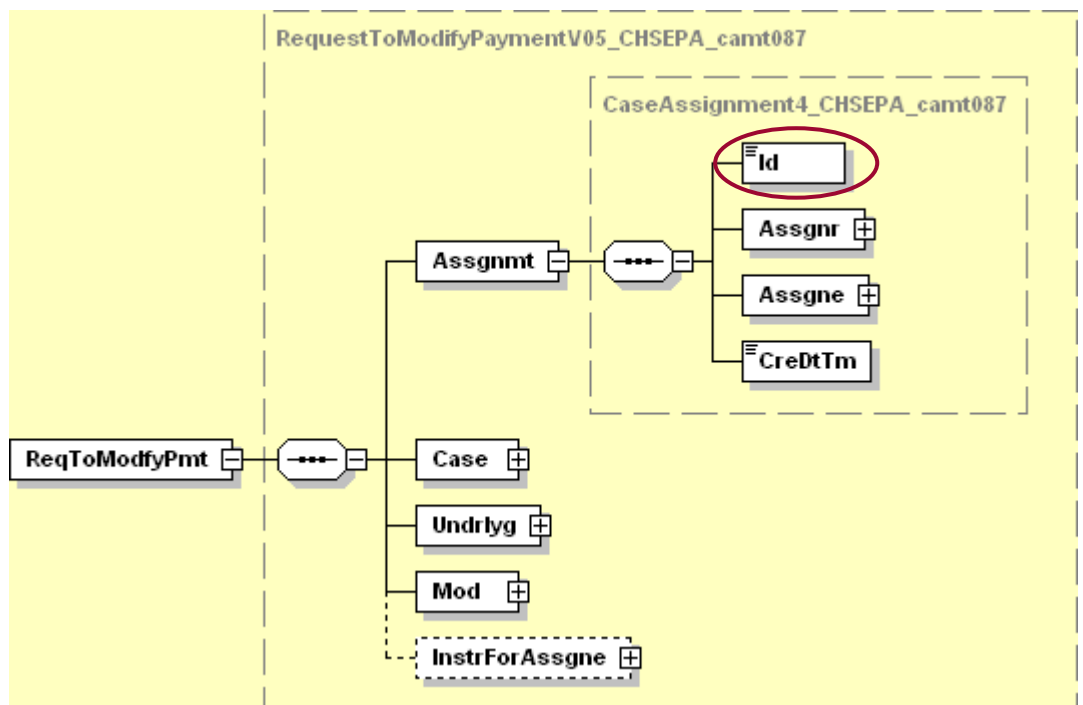

Figure 3: Message Identification (Identification)

### 3.2.2 Other references

#### Identification of the "SEPA Value Date Adjustment Request" by means of the "Case Identification" element.

The identification of the "SEPA Value Date Adjustment Request" is the unambiguous reference of the query. This reference is assigned by the instructing participant when the transaction is being set up and is forwarded unchanged by the RTGS systems to the instructed participant. It is also used for the "technical" duplicate checking at transaction level.

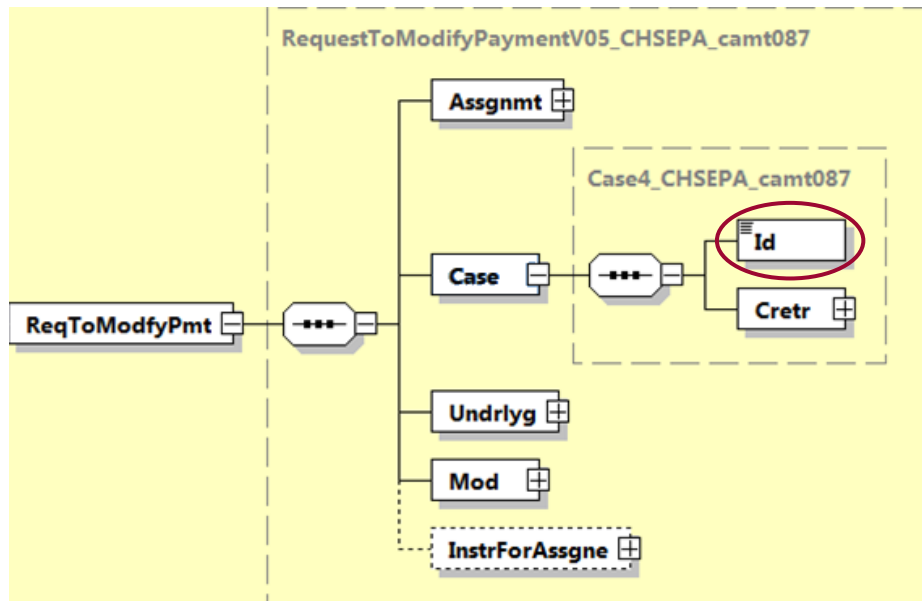

Figure 4: Identification of the "SEPA Value Date Adjustment Request"

### Original Transaction Identification

The transaction reference of the original payment must be provided and sent in the **<OrgnlTxId>** element.

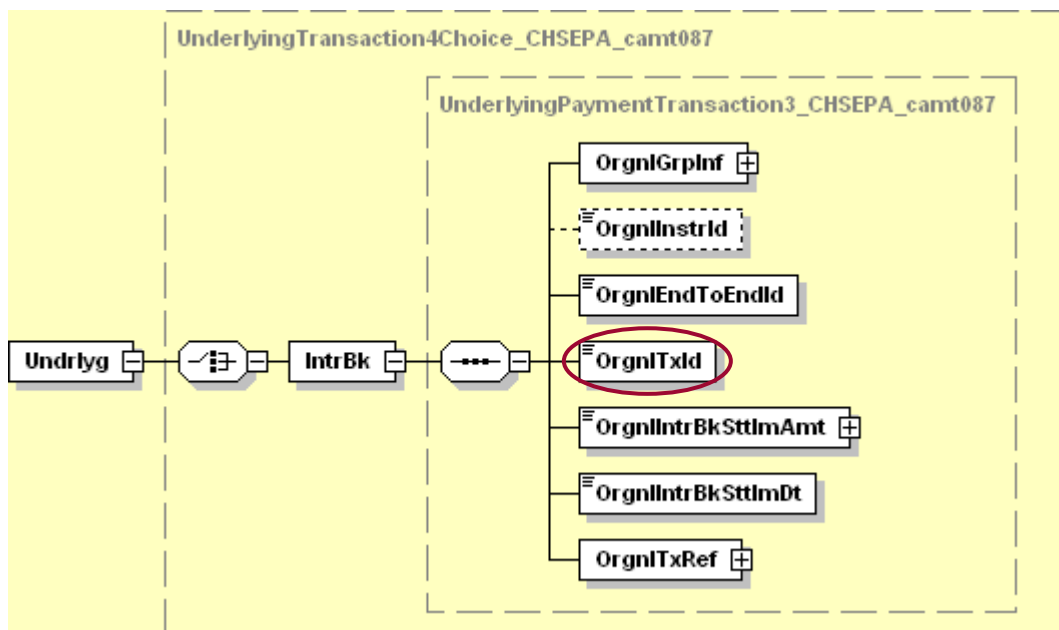

Figure 5: Identification of the transaction reference of the original payment

### Information content in the original message

Information on the original payment must be supplied in the "SEPA Value Date Adjustment Request" within the elements "IntrBk" and "OrgnlTxRef":

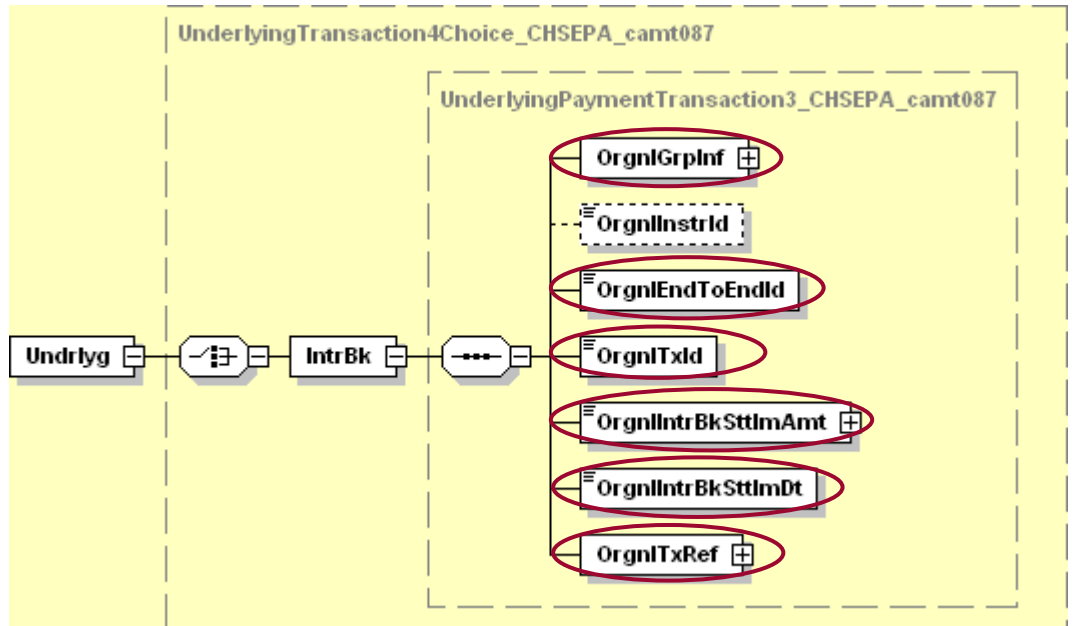

Figure 6: Elements for information from the original message

The transaction level includes elements from the original payment as well as elements related to the payment itself.

In the "Original Transaction Reference" element at the original payment level, an exact copy of the same elements from the original payment should be sent.

### 3.3 Further business specifications

Further business specifications can be found in the Base Document.

## 4 Technical specifications for the RTGS systems

### 4.1 Assignment (Assgnmt, Block 1)

"Assignment" (Block 1 of the message) occurs exactly once in the message and contains the following elements:

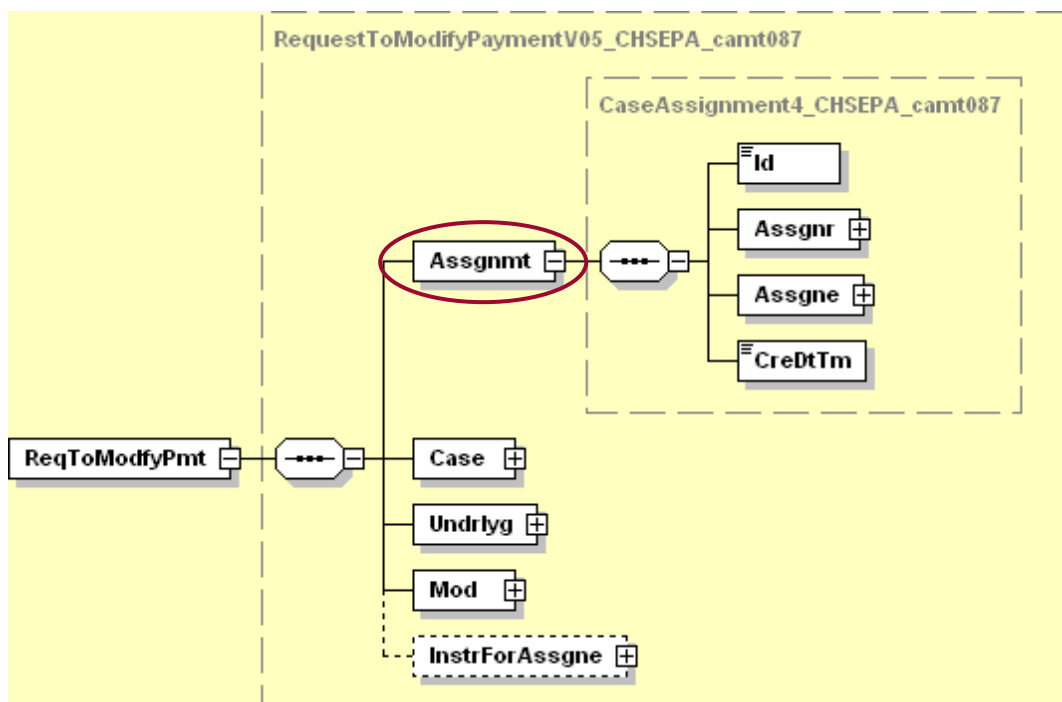

Figure 7: Assignment (Assgnmt)

The following table specifies all the elements of "Assignment" in the "camt.087" message that are relevant to the RTGS systems.

ISO 20022 Standard			Swiss ISO 20022 Payments Standard

## 4.4 Modification (Mod, Block 4)

"Modification" (Block 4 of the message) contains the following data:

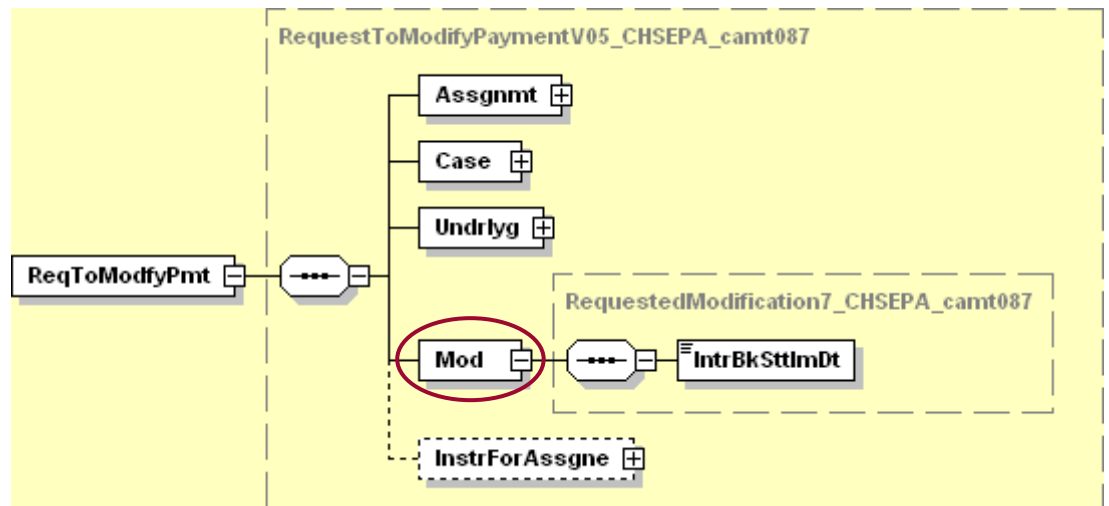

Figure 10: Modification (Mod)

The following table specifies all the elements of "Modification" in the "camt.087" message that are relevant to the RTGS systems.

ISO 20022 Standard			Swiss ISO 20022 Payments Standard		
Message Item	XML Tag	Mul	Mul	Definition	SEPA
Modification	Mod	1..1	1..1	<b>Requested Modification</b>	Only 'Interbank Settlement Date' is allowed. Yellow Field
Modification +Interbank Settlement Date	IntrBkSttlmDt	0..1	1..1	<b>Interbank Settlement Date</b>	Mandatory Contains the interbank settlement date to be applied by the Beneficiary Bank, as a consequence: - If the Interbank Settlement Date of the initial pacs.008 was correct: AT-42 'Settlement Date of the Credit Transfer in Euro' must be provided (as part of AT-82 'Additional Information to AT-80 SCT Inquiry reason code' i.e. the initially expected settlement date). - If the Interbank Settlement Date of the initial pacs.008 was incorrect: the new requested Interbank Settlement Date must be provided. Yellow Field

Table 5: Modification (Mod, Block 4)

## 4.5 Instruction for Assignee (InstrForAssgne, Block 5)

"Instruction for Assignee" (Block 5 of the message) contains the following data:

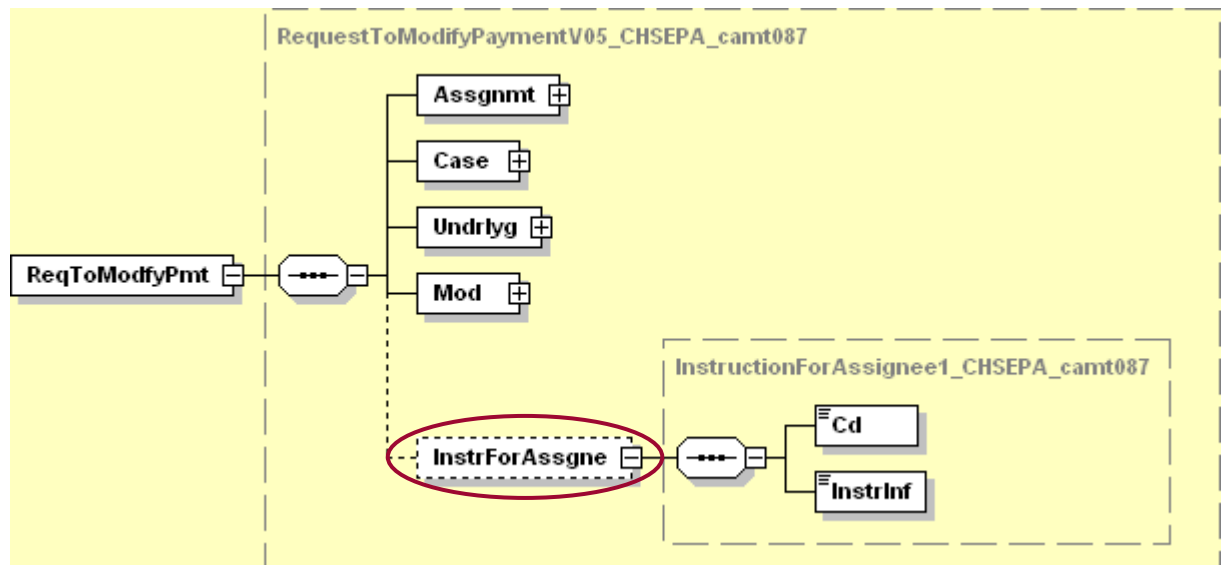

Figure 11: Instruction for Assignee (InstrForAssgne)

The following table specifies all the elements of "Instruction for Assignee" in the "camt.087" message that are relevant to the RTGS systems.

ISO-20022-Standard			Schweizer ISO-20022-Zahlungsstandard			
Message Item	XML Tag	Mult	Mult	Definition	SEPA	
Instruction For Assignee	InstrForAssgne	0..1	0..1	<b>Instruction For Assignee</b>	If used to accommodate AT-82, the first 20 characters must refer to the date and time at which the Originator Bank received the credit transfer instruction from the Originator. Such date and time must be expressed in the ISO format YYYY-MM-DDThh:mm:ssZ. Yellow Field	
Instruction For Assignee +Code	Cd	0..1	1..1	<b>Instruction Code</b> Only INQR (Inquiry) is permitted.	Mandatory Only INQR (Inquiry) is allowed. Yellow Field	
Instruction For Assignee +Instruction Information	InstrInf	0..1	1..1	<b>Processing Instruction (text)</b>	Mandatory The text shall be in a comprehensible language to the Scheme Participant receiving the SCT inquiry who is obliged to act upon this. Yellow Field	

Table 6: Instruction for Assignee (InstrForAssgne, Block 5)

#### **4.6                      Supplementary Data (SplmtryData, Block 6)**

---

*"Supplementary Data"* (Block 6 of the message) is not used by the RTGS systems.

## 5 Example

The following example shows a "SEPA Value Date Adjustment Request" from the debtor agent to the creditor agent.

The Banque Commerciale, Fribourg made a transfer of EUR 5,000 to the account of of the watch wholesaler Buxtehude at the Remote Bank Frankfurt. The requested value date was 2020-02-20.

The payment was effectively credited on 25-02-2020 to the account of the watch wholesaler Buxtehude. This then contacted its bank, which had made the transfer. Therefore, Banque Commerciale issues a "SEPA Value Date Adjustment Request" for the executed payment (pacs.008) to Remote Bank Frankfurt asking for an adjustment of the valuedate to 20-02-2020.

### Business elements of the "SEPA Value Date Adjustment Request"

Business element	Content
Payment type	SEPA Value Date Adjustment Request
Message identification	MSGID-087-0001
Identification of instructing participant (BIC)	BCFRCHBBXXX
Identification of instructed participant (BIC)	SECGDEFFXXX
Creation date and time of the message	2020-03-12T16:10:10
Identification of the «SEPA missing incoming payment query»	087-4711
Identification of the debtor agent which triggered the original message (BIC)	BCFRCHBBXXX
Message identification of the original payment	MSGID-20200217-090615-01
Message type of the original payment	pacs.008.001.02
Debtor's payment reference of the original payment	1234567890
Transaction reference of the original payment	20200217000004
Settlement amount of the original payment	5000
Currency code	EUR
Value date of the original payment	2020-02-20

## Appendix A: XML schema and example

---

### XML schema

The XML schema for "pacs.087" for the RTGS systems

- ***camt.087.001.05.chsepa.01.xsd***

is published on the SIX Interbank Clearing Ltd website.

It should preferably be opened using specific XML software.

### Example

The example shown in section 5 is published on the SIX Interbank Clearing Ltd website as an XML file:

- ***camt\_087\_Beispiel.xml***

### Validation Portal

The above mentioned example message as well as this implementation guideline, the XML schema and additional examples can also be downloaded from the SIC & euroSIC Validation Portal Interbank Messages (<https://validation.iso-payments.ch/SIC4>).

After successful registration users can upload their own messages and have them validated against this implementation guideline.
