

Benchmark Statement

Nordic Index Family - SIX Sweden Dividend 21 SRI Index GI
(SIXSEDIV21SRIGI)

The SIX Sweden Dividend 21 SRI Index GI (SIXSEDIV21SRIGI) was published on 2020-03-10 and the last update took place on 2020-12-11.

1 Description of the Market or Economic Reality

1.1 Description economic reality and geographical boundaries

SIXSEDIV21SRIGI is constructed to reflect the market performance of the 21 Large Cap shares with the highest dividend yield listed on the Nasdaq Stockholm Exchange. Constituent shares are weighted in accordance with their market capitalization. SIXSEDIV21SRIGI index exclude companies that do not meet modern standards of social, environmental and ethical criteria where the concepts of sustainability and corporate responsibility are central. Only ordinary shares can be included in the index.

The total dividend is reinvested in the index.

The start value for SIXSEDIV21SRIGI is 100 with base date, 29 February 2016.

SIXSEDIV21SRIGI is calculated in SEK.

1.2 Any other information deemed relevant by administrator for clients to understand features of the market

To qualify as an index constituent, each share must be included amongst the 60 most traded, in terms of accumulated turnover, share series on the Stockholm Stock Exchange. The selection of the 60 most traded shares is based on the population of SIX60. (The SIX60 index is based on the 60 most traded stock series on the Nasdaq Stockholm Stock Exchange, please see the SIX60 rule book for further information).

Out of the 60 most traded series of shares, the index population in SIXSEDIV21SRIGI consists of the 21 companies with the highest weighted dividend yield over the past three years. If the company has several share series listed, the most traded share is selected.

The dividend yield is weighted as follows:

The proposed dividend for the current year is weighted at 60% and the two previous years dividends are weighted at 30% (last year) and 10% (two years ago) respectively.

1.3 Derived indices

There are no derived indices.

2 Potential Limitations of the Benchmark Family

2.1 Circumstances where lack of sufficient input data leads to unreliable benchmark

If data which is necessary to determine the price or weight of an index component is not available to SIX due to trade suspensions or market distortions the latest available data is used. Such cases may lead to a deviation from the general principles of the indices defined in the respective methodology rulebooks.

Where SIX considers that the input data does not represent the market or economic reality that a benchmark is intended to measure, SIX will, within a reasonable time period, either change the input data or the methodology in order that the input data does represent such market or economic reality, or else cease to provide that benchmark.

2.2 Circumstances when accuracy and reliability of methodology can no longer be ensured

In case of structural changes of the market or economic reality or in cases where the interest in a market has diminished or is non-functioning, the reliability of a methodology can no longer be ensured. SIX reviews the methodology rulebooks at least annually to anticipate any such changes and mitigate its consequences by adjusting the methodology accordingly.

3 Controls and Rules for the Exercise of Expert Judgement

3.1 Elements of the calculation of the benchmark in relation to which discretion may be exercised

The rules for SIXSEDIV21SRIGI have been designed to eliminate discretion or expert judgement for the benchmark calculation to the greatest extent possible. However, there might be unexpected events, such as complex corporate actions, structural changes to the markets, or operational issues at Nasdaq Stockholm Stock Exchange, which require actions that are not described in the methodology rulebooks.

In such (unexpected) cases, a pre-defined Expert Judgement process has been established. SIX will evaluate and document the use of discretion as part of the Expert Judgement process. The goal will always be to update the respective methodology rulebook to capture these unexpected cases with a new transparent rule. In addition, any feedback from market participants about the use of discretion will usually be discussed in the upcoming Index Management and LLT meetings.

SIX ensures that the rules of the benchmarks are applied correctly and fulfil the required quality standards. SIX works against structured processes to ensure compliance with a regulatory framework. Further documentation on regulation and processes can be found on the SIX website:

<https://www.six-group.com/nordic-indices>

3.2 Criteria applicable to the exercise of such discretion and the position of each function or body that may exercise discretion

See section 3 above

3.3 Steps of ex-post evaluation process on the use of discretion, and clear reference to the position of any person(s) who evaluates an exercise of discretion

See section 3 above

3.4 Controls and rules that govern any exercise of judgement

See section 3 above

4 Methodology of the Benchmark Family

4.1 Rationale for adopting a benchmark

The benchmark methodology used in SIXSEDIV21SRIGI is designed to measure the market or economic reality described in section 1.1. The benchmark methodology is written using clear, transparent and concise rules, which makes it easy for the benchmark users to select the appropriate benchmark for their purpose.

4.2 Procedures for review and approval of methodology (including public consultation in case of material changes)

SIX follows a structured and detailed process for benchmark methodology changes. A revised methodology must remain executable and result in an accurate and reliable representation of the economic realities of the interest the benchmark seeks to measure. Under no circumstances will SIX retrospectively change any of its rules and/or methodologies. SIX ensures that a change of methodology does not violate any of the requirements defined for developing a benchmark methodology and does not violate the minimum disclosure requirement defined for the content of the benchmark methodology.

Where feasible, SIX aims to consult on all material methodology changes with representatives of relevant clients and other stakeholder groups. A summary of the market consultations' comments and SIX' summary response to those comments will be made accessible to clients and stakeholders after any given consultation period, except where the originator of the comments has requested confidentiality.

A material methodology change comprises a change that "significantly modifies the procedures applied to the determination of a benchmark" and, therefore, the benchmark value compared to an unchanged scenario. Examples of changes that are

considered material in their nature include changes in: Benchmark objective and the market it seeks to measure (e.g., market leader components vs. mid cap companies), benchmark component count, periodical review (determination) frequency, component universe and selection rules, weighting rules, introduction or removal of fast exit/entry rules, component replacement procedures, corporate actions treatments including merger and takeover treatments, and/or rebalancing rules.

Review and public consultation:

The validity of the index methodology is reviewed on an annual basis. SIX has a right to stipulate changes to the rules if necessary to maintain the purpose of the index or if any law, regulation or decision by an authority makes this necessary or if such a change is considered appropriate due to a change in market practice. In exceptional cases a broad market consultation can be conducted. The changes to the index methodology are publicly announced with an appropriate lead time.

4.3 Indication that factors (internal/external) may necessitate changes or cessation of BM

Input includes, but is not limited to:

- Political and economic changes in markets;
- Internal feedback from staff members;
- External feedback from clients and other stakeholders;
- Feedback from Oversight Function.

5 Determination of a Benchmark

5.1 Description of input data and priority given to different types of input data

SIXSEDIV21SRIGI uses traded prices (regulated data) from regulated markets (representing observable bona fide, arms-length transactions).

SIXSEDIV21SRIGI specifies a single data input rather than a priority of inputs as no alternative source or data input is used.

5.2 Description of the input data, the source of the input data used, and the type of source of input data

Direct data feeds of NASDAQ Stockholm Stock Exchange to obtain regulated market data from the trading systems.

5.3 Minimum data needed to determine a benchmark

In case of market distortion, updated prices for constituents corresponding to at least 30% of the benchmarks market cap value is needed to calculate a new benchmark value.

5.4 Models or methods of extrapolation

Extrapolation is not used in the calculation of SIXSEDIV21SRIGI.

5.5 Procedures for rebalancing

The index is revised annually and implementation begins on the first trading day in March and lasts for five trading days. The cut off day is five trading days prior to the first implementation day.

During the review period, the existing portfolio is withdrawn from the index at 20 percent per share series per day. The number of shares withdrawn is based on data from the last trading day in February. The review commences on the first trading day in March and lasts for five trading days. The amount received by withdrawn companies is equally invested in the new portfolio throughout the five-day period. In this way, the old population is replaced and the new population is weighted continuously. During the review period, the index may contain more than 21 companies. After closing the fourth trading day in March, all companies in the company are weighted equally.

If a company is the subject of a public takeover bid, the company shall not be considered as an Index Share at the time of the revision.

Any company that fails to meet the requirements for sustainable and responsible investment are excluded from the index.

Companies involved in verified violations of international standards regarding the environment, human rights, labour relations, anti-corruption legislation or the involvement in controversial weapons are excluded.

Companies with a turnover exceeding 5% that are generally related to alcohol, gambling, tobacco, pornography or military equipment are excluded.

Requirements of sustainability include paying special attention to a companies' involvement in fossil fuels including coal, oil and gas, where a general exclusion is made for companies involved in activities related to generation, extraction or processing of fossil fuels.

5.6 Procedures which govern the determination of the benchmark in periods of stress or periods where transaction data sources may be insufficient, inaccurate or unreliable

If data that is necessary to determine the price or weight of an index component is not available to SIX due to market distortions the latest available data is used.

5.7 Procedures for dealing with errors in input data including when a re-determination of the benchmark is required

At SIX, an incident is opened and an incident manager is appointed and coordinates the work within the Index Operations Team at SIX as well as with other SIX departments. The incident manager will be responsible for documenting relevant information about the incident, but is not required to do so until the issue has been resolved.

The Index Management Team of SIX is informed about incidents as soon as possible.

Clients and other stakeholders are informed in a timely manner.

The details of incidents are discussed at regular meetings within the involved SIX departments. The meeting agendas ensures that common problems and possible sources of incidents are identified and recorded.

Errors in input data affecting the benchmark which are detected the same trading day are immediately corrected. Errors in input data affecting the benchmark that are older than one trading day are corrected if technically possible and appropriate.

6 Classification of benchmark

6.1 Statement whether contributed/regulated data is used

Regulated data

6.2 Statement whether benchmark qualifies as regulated data benchmark/interest rate/ commodity benchmark

The benchmark qualifies as a regulated data benchmark.

6.3 Statement regarding non-significance of whole family (only non-significant, both significant and non-significant)

Only non-significant

7 ESG Disclosures

SIXSEDIV21SRIGI takes into account environmental, social and governance (ESG) factors in the index design and pursues ESG objectives.

SIX does not administer any EU Climate Transition Benchmarks or any EU Paris-aligned Benchmarks.

The template for explaining how ESG factors are reflected in the benchmark statement for SIXSEDIV21SRIGI can be found on the SIX website:
