1 Introduction

SIX Financial Information (SIX) is the Owner and Index Provider of the indices SIX30 Index (SIX30), SIX30 Return Index (SIX30RX) and SIX30 Net Return Index (SIX30NRX).

The SIX30 indices are constructed to reflect the market performance of the 30 most traded shares listed on the Nasdaq Stockholm Stock Exchange. The weights for the companies included in the index are in relation to their market capitalization.

Companies that violate international norms such as the Global Compact Principles and related international norms, and legislation regarding the environment, human rights, labor relations, anti-corruption, are excluded from the index. This also applies to companies involved in controversial weapons. The screening of the companies is made by Sustainalytics.

Returns received by shareholders in the form of dividends are reinvested in SIX30RX. Returns received by shareholders in the form of dividends are reinvested with the deduction of tax in SIX30NRX. Ordinary dividends are not reinvested in SIX30.

SIX30RX and SIX30NRX are based on the same methodology as SIX30.

The start value for:
- SIX30 is 125 with base date, 30th of December 1986
- SIX30RX is 100 with base date, 30th of December 1999
- SIX30NRX is 100 with base date, 28th of December 2007

The base currency for the SIX30 indices is SEK.

1.1 Definitions

Index Company – A Company issuing an Index Share.

Index Share – A constituent share of SIX30. A share class of an Index Company.

Index Provider – The Index Calculator and Distributor of index values and reports.

2 Index Population

2.1 Selection of Index Shares and Review Process

SIX30’s index population consists of the 30 most traded series of shares for the measurement period defined below.

SIX30 is reviewed semi-annually and the new population implemented the first trading day in January and July. The cut-off is after closing the last trading day in May and November and applies to shares which meet the following requirements:

- To be included in SIX30, the share must be listed on the Nasdaq Stockholm Stock Exchange
- Only ordinary shares can be included in the index

Information regarding the new index population is published not later than 10 trading days after the cut-off day in June and December.

The turnover of shares meeting these requirements is then measured. The measurement period comprises the six-month period beginning seven months prior to the implementation date (December–May and June–November). The trading turnover is based on the accumulated turnover during the measurement period per share series in SEK.

If an Index Share is not amongst the top 45 shares in terms of trading turnover, that Index Share will be replaced by the non-Index Share with the highest trading turnover.

If a non-Index Share is included in the top 15 shares in terms of trading turnover, that Index Share will replace the current Index Share with the lowest trading turnover.

If, during the measurement period, the trading of a share, which may be considered for inclusion as an Index Share, derives mainly from a small number of transactions or relates to a limited period of time so that the trading is therefore considered to be unrepresentative, the abnormal transactions will be excluded in the measurement.
If a non-Index Company is subject to a public purchase offer, then the company's share will not be considered for inclusion as an Index Share when a review takes place.

When a new share is added to SIX30, the input share price is set equal to the average price from the previous trading day. When an Index Share is removed from SIX30, the Index Share price is set to the volume weighted average price (see section 3.3) during the last trading day as Index Share.

2.2 Changes in the Composition of SIX30 Aside From Ordinary Reviews

In the event of bankruptcy of an Index Company, the Index Share will be excluded from SIX30. On its final day as SIX30 constituent the price of the Index Share will be set at zero.

If an Index Company is subject to a public offer for acquisition of shares or an Index Company approves a merger agreement, the Index Provider may decide that the share will no longer be considered an Index Share or that it must be replaced by the share of the offerer/predator company. In the event of any such change the Index Provider, based on the conditions of the offer or merger in question, will establish the number of shares used in the index calculation. The Index Provider will establish the date for the change as follows:

I. If the new Index Share is listed before the existing Index Shares last listing day, the change to the new Index Share will take place from its second listing day
II. If the existing Index Share is delisted before the new Index Shares first listing day, the existing Index Share will be removed from the index calculation the day after its last listing day. The new Index Share will be included in the index calculation from its second listing day

If a company's share is listed on the Nasdaq Stockholm Stock Exchange before the implementation date, that company's share may be considered for inclusion as an extra Index Share. In order for the company's share to be considered for inclusion, the share's market value must be expected to account for at least 5% of the market value of SIX30 and the share’s liquidity is expected to be among the top 15 shares in terms of trading turnover.

In the event of any such change, a volume weighted average price will be applied (see section 3.3).

As soon as SIX has received information that an offerer/predator company owns greater than 90% of the target company’s share capital, the target company will be excluded from the index population.

3 Calculating the Index Value

3.1 Calculation of Market Capitalization

The market capitalization for each Index Share will be calculated by multiplying the number of ordinary shares by the last traded price. The total market capitalization of SIX30 is defined as the sum of the market capitalization of all the Index Shares on the respective calculation day.

The Index Value today \(t\) is calculated by dividing total market capitalization today \(t\) with total market capitalization yesterday \(t-1\), adjusted by new issues and multiplying this ratio by the Index Value yesterday \(t-1\).

3.2 Formula for Calculating the Index Value

\[
\text{SIX30}_t = \left( \frac{\sum (Q_t \cdot P_t)}{\sum (Q_{t-1} \cdot P_{t-1}) + A} \right) \cdot \text{SIX30}_{t-1}
\]

\(\text{SIX30}_t\) = Index value today

\(Q_t\) = Number of shares today

\(P_t\) = Last traded price today

\(Q_{t-1}\) = Number of shares yesterday

\(P_{t-1}\) = Last traded price yesterday

\(A\) = Amount for adjustment of base value at new issues and the like

\(\text{SIX30}_{t-1}\) = Index value yesterday
\[
\text{SIX30RX}_t = \frac{\sum (Q_t \cdot P_t)}{\sum ((Q_{t-1} \cdot P_{t-1}) + A)} \cdot \text{SIX30RX}_{t-1} - D_t
\]

\[
\text{SIX30RX}_t = \text{Index value today}
\]
\[
Q_t = \text{Number of shares today}
\]
\[
P_t = \text{Last traded price today}
\]
\[
D_t = \text{Dividend today}
\]
\[
Q_{t-1} = \text{Number of shares yesterday}
\]
\[
P_{t-1} = \text{Last traded price yesterday}
\]
\[
A = \text{Amount for adjustment of base value at new issues and the like}
\]
\[
\text{SIX30RX}_{t-1} = \text{Index value yesterday}
\]

\[
\text{SIX30NRX}_t = \frac{\sum (Q_t \cdot P_t)}{\sum ((Q_{t-1} \cdot P_{t-1}) + A) - ND_t} \cdot \text{SIX30NRX}_{t-1}
\]

\[
\text{SIX30NRX}_t = \text{Index value today}
\]
\[
Q_t = \text{Number of shares today}
\]
\[
P_t = \text{Last traded price today}
\]
\[
ND_t = \text{Net dividend today}
\]
\[
Q_{t-1} = \text{Number of shares yesterday}
\]
\[
P_{t-1} = \text{Last traded price yesterday}
\]
\[
A = \text{Amount for adjustment of base value at new issues and the like}
\]
\[
\text{SIX30NRX}_{t-1} = \text{Index value yesterday}
\]

### 3.3 Share Prices (P)

Share prices are sourced directly from the respective stock exchange(s) on which the constituents of the index are traded (as mentioned in section 2.1). As a rule, the last-paid price is used in the index calculation. If a share has not traded on a certain day, the last available last-paid price is used. This also includes situations when trading is suspended.

- Last-paid price: The last traded price on the exchange
- Closing price: The last-paid price of a trading day from an exchange. This includes trades made in a closing call or auction if used by the exchange in question
- Adjusted price: Both the opening and closing price may be subject to adjustments in accordance with the index methodology. Certain adjustments may require the share price to be fixed during an entire day’s trading or longer
- Volume weighted average price (VWAP): The ratio of the value traded to total volume traded

The liquidity of the underlying market impacts how frequently last-paid prices update. If liquidity is poor, the index value will update less often, yet still reflect the underlying market at that point in time.

### 3.4 Number of Index Shares in Index (Q)

A current list of Index Shares is maintained by the Index Provider and available via index reports.
3.5 Dividends Payments

3.5.1 Gross Indices (GI)
Dividends are reinvested in the SIX30RX index by reducing the input share price on the ex-dividend date by the dividend amount. In this way, dividends are reinvested in Index Companies in relation to their weights. Dividends are based on declared dividends by the Index Company.

3.5.2 Net Indices (NI)
Dividends are reinvested in the SIX30NRX by reducing the input share price on the ex-dividend date by the dividend amount, adjusted with tax. In this way, dividends are reinvested in Index Companies in relation to their weights. Dividends are based on declared dividends by the Index Company.

3.5.3 Price Indices (PI)
Ordinary dividends are not reinvested in the SIX30 index. However, extraordinary dividends are reinvested in the SIX30 index. If the Index Company decides on a dividend payout, the Index Provider makes an adjustment for cash dividends, which are classified by the Index Company as extraordinary cash dividends.

3.5.4 Dividends in Foreign Currency
If the dividend declared by the Index Company is not quoted in SEK then the dividend value is converted to SEK using the 17:00 CET WMC currency fixing on the day before ex-day.

3.6 Equity Corporate Actions (A)

3.6.1 Sources
Corporate action information is collected from public information sources, listed companies, Stock Exchanges and regulatory agencies.

3.6.2 Stock Split and Reverse Split
Stock splits and reverse stock splits in an Index Share result in an adjustment of the share price, in accordance with the conditions of the split, from the day on which the Index Share is traded ex-split on the Stock Exchange. The share price adjustment is offset by a change in number of shares.

3.6.3 Bonus Issue
In the event of a bonus issue of an Index Share, the number of shares in the index calculation for the Index Share is increased by the number of new shares from the day on which the bonus issue of the Index Share is listed excluding fractional rights on the Stock Exchange. If a bonus issue involves the issue of a new type of share that deviates from the Index Share, the Fixed Price Method described in section 3.6.4.6 will be used.

3.6.4 Adjustments for Rights Issue, etc.
SIX use the following index methods to ensure that SIX30 accurately reflects the market performance of its constituents.

3.6.4.1 Standard Method
When a rights issue with precedence for existing shareholders takes place for an Index Share and the newly issued share does not significantly deviate from the ordinary share, the number of Index Shares will be increased according to the so-called Standard Method with effect from the day the share is listed ex-rights on the Stock Exchange (ex-day). On the ex-day, the base value will be adjusted in accordance with section 3.2 above. Parameter (A) is calculated by multiplying the newly added number of shares by the rights issue price per share. It is assumed that the shares in the issue are fully subscribed.
3.6.4.2 Valuation Method, Inclusion Method and Fixed Price Method

If the Index Company to which the Index Share relates adopts any of the measures listed below in any circumstances other than those described in section 3.6.4.1 above – where the company’s shareholders have a preferential right to participate, then the Valuation Method, the Inclusion Method or the Fixed Price Method will be used. The following measures may form the basis for an adjustment in accordance with this section 3.6.4.2:

- Issue of convertible debt certificates, debt certificates associated with warrants to subscribe for new issues or similar securities that affect the Index Share
- Offer to acquire securities or rights of any kind or to acquire such securities or rights without payment
- New issue involving a new type of share that is not an ordinary share and that deviates from the Index Share

3.6.4.3 Valuation Method

The Valuation Method can be used if the rights are listed on a Stock Exchange or other regulated market place. The valuation is based on the price for the rights on the day before the ex-rights day. If the rights can be valued according to the Valuation Method, the input share price of the Index Share on the ex-rights day is equal to the previous trading day’s last traded price with a deduction for the calculated value of the rights. The intra-day index calculation is carried out thereafter using the last traded prices from the Stock Exchange or other regulated market place.

3.6.4.4 Inclusion Method

When available an external valuation will be processed in the following way:

On the ex-day, the input share price for the Index Company carrying out the spin-off (Parent Company) is reduced by the external valuation and the calculation is then carried out using the last traded price. For the Index Company subject to the spin-off (Subsidiary Company), the input and output share prices are equal to the valuation. This value remains until the company is listed or removed from the index population.

3.6.4.5 Lack of External Valuation

If there is no external valuation, the index will be processed as follows:

On the ex-day, the input share price for the Index Company carrying out the spin-off is the previous day’s closing price and the output share price is equal to the reduction in base currency for the first transaction by the company carrying out the spin-off, in relation to the condition. This value remains until the company is listed or removed from the index population.

If the Subsidiary Company is not listed on the Stock Exchange within three months, it will be excluded from the index calculation. If the Subsidiary Company is listed on the Stock Exchange within three months, the input share price on the listing day is equal to the valuation and the output share price is equal to the official closing price for the company.

3.6.4.6 Fixed Price Method

On the day the Index Share is traded exclusive of a subscription right (or similar right) at the Stock Exchange, the index is calculated by using the last traded price from the previous day’s trading. This price will be used in the index calculation up to and including the day when the first traded price exclusive of asubscription right (or corresponding right) was listed at the Stock Exchange. A new base value will be calculated for the following day using the last traded price from the previous day.

3.6.4.7 Redemption of Index Shares

When shares are redeemed, aimed at all shareholders, the valuation method described in section 3.6.4.3 will be used. If a subscription period extends over more than two weeks from the day the Index Share is listed ex-rights to participate in the redemption, the number of shares will be reduced, down-weighted, the day after the Index Provider has received the information on the number of shares redeemed. The number of shares today (Qt) and the number of shares yesterday (Qt−1) is reduced by the number of redeemed shares. If the subscription period is less than two weeks, the down-weighting will take place on the day the Index Share is listed ex-rights to participate in the redemption.
3.7 Other Adjustments
With regard to adjustments in accordance with this rulebook, SIX may carry out an adjustment other than that referred to above or may decide to change a provision on adjustment in order to maintain the purpose of the Index.

3.8 Calculation of the Average Index
When calculating the average index for a day, the price for each Index Share will consist of the trading in SEK converted, as appropriate, to SEK and divided by the corresponding number of shares (average price). Only transactions carried out during the opening hours for share-trading on the Nasdaq Stockholm Stock Exchange within the price interval of highest purchase price and lowest selling price applying at the moment of the transaction are taken into consideration.

4 Trading Day
The SIX30 indices are calculated every day Nasdaq Stockholm Stock Exchange is open for trade.

5 Correction Policy
An index-related correction is made if the necessary input data is not available or is incorrect.

5.1 Unavailable Data
If data that is necessary to determine the price or weight of an index component is not available to SIX due to trade suspensions or market distortions the latest available data is used. Such cases may lead to a deviation from the principles of an index defined in this rulebook. These changes may be related to review schedules, ordinary reviews and extraordinary component changes and are announced with a minimal lead-time of two trading days to customers.

5.2 Incorrect Data
Errors in the necessary data can be caused by calculation errors or by incorrect input data.
Calculation errors that are detected within a trading day are corrected immediately. Intraday data is not corrected retrospectively. Calculation errors older than one trading day are only corrected when technically feasible and appropriate. If the correction leads to a significant difference in the index values, the index values can be corrected retrospectively.

6 Minimum Data Needed to Calculate the Index
In case of market distortion, updated prices for constituents corresponding to at least 30% of the index market cap value is needed to calculate a new index value.

7 Changes to the Methodology

7.1 Methodology Changes
The validity of the index methodology is reviewed on a regular basis. SIX follows structured processes to ensure compliance with a regulatory framework. SIX has a right to stipulate changes to the rules if necessary to maintain the purpose of the index or if any law, regulation or decision by an authority makes this necessary, or if such a change is considered appropriate due to a change in market practice. In exceptional cases, a broad market consultation can be conducted. The market consultation will provide advance notice and a clear timeframe that gives stakeholders sufficient opportunity to analyze and comment on the impact of such proposed material changes. The changes to the index methodology are publicly announced with an appropriate lead-time and shall contain information describing the key elements of the methodology that would be affected by the proposed change, enabling stakeholder to assess the impact of the coming changes.

A material methodology change comprises a change that significantly modifies the procedures applied to the determination of an index and, therefore, the index value compared to an unchanged scenario. Examples of changes that are considered
material in their nature include changes in: index objective and the market it seeks to measure (e.g., market leader components vs. mid cap companies), index component count, periodical review (determination) frequency, component universe and selection rules, weighting rules, introduction or removal of fast exit/entry rules, component replacement procedures, corporate actions treatments including merger and takeover treatments, and/or rebalancing rules.

7.2 Cessation of Calculation

A decision to discontinue the calculation of the index will be publicly announced by SIX with an appropriate lead-time.

In the event existing financial products are linked to the index, of which the Index Provider is aware, a market consultation will be conducted in advance and a transition period introduced before the definitive termination.

8 Expert Judgement and Discretion

SIX30 is calculated using readily available input data. SIX has implemented a robust and reliable index methodology including clear rules how and when discretion or expert judgement may be exercised for the determination of an index. Such methodology ensures that the index can be calculated in the widest set of possible circumstances. However, there might be unexpected events that require actions that are not described in the methodology rulebooks. Such events can materialize in situations including:

- Complex corporate actions
- Determination of materiality of changes to the index methodology
- Index/benchmark termination
- Exclusion of stocks from rankings
- Determination of prices in case of subscription rights
- Non-rule-based Correction (treatment of calculation error)
- Limitations
- Deviation from standard consultation period in case of material changes of the index methodology
- Review and approval of special cases identified during index review
- Decisions with respect to complaints

In such (unexpected) cases, a pre-defined Expert Judgement Management process has been established. SIX will evaluate and document the use of discretion or expert judgement as part of the Expert Judgement Management process. The goal will always be to update the respective methodology rulebook to capture these unexpected cases with a new transparent rule. In addition, any feedback from market participants about the use of discretion or expert judgement will usually be discussed in the upcoming Index Management and Local Leadership Team meeting.

SIX ensures that the rules of the indices are applied correctly and fulfil the required quality standards. SIX follows structured processes to ensure compliance with a regulatory framework. Further documentation on regulation and processes can be found at: www.six-group.com

9 Limitations

A potential limitation of the index can occur from circumstances when the accuracy and reliability of methodology no longer can be ensured, and may lead to a deviation from the general principles of the indices as defined in the respective methodology rulebooks. Potential limitations of the methodology can materialize in situations including:

- Data insufficiency, meaning a scenario in which the calculation of an index is no longer possible due to insufficient data quantity or quality
- Failure to produce index values as intended
- Market disruption which results in the performance of the index being unable to be tracked
- Unexpected events, such as complex corporate actions
- Technical reasons, for example the inability of a stock exchange to provide a close price due to a computer outage
- Where a rule allows for several interpretations ("unclear rule")
- The absence of a rule in the methodology which potentially leads to an index value which does not properly reflect the nature of the index ("insufficient rule")

If data, which is necessary to determine the price or weight of an index component, is not available to SIX due to trade suspensions or market distortions, the latest available data is used. Where SIX considers that the input data does not represent the market or economic reality that an index is intended to measure, SIX will, within a reasonable time period, either change the input data or the methodology in order that the input data does represent such market or economic reality, or else cease to provide that index.

In case of structural changes of the market or economic reality or in cases where the interest in a market has diminished or is non-functioning, the reliability of a methodology can no longer be ensured. SIX reviews the methodology rulebooks at least annually to anticipate any such changes and mitigate its consequences by adjusting the methodology accordingly.

10 **ESG Disclosures**

SIX30 takes into account environmental, social and governance (ESG) factors in the index design and pursues ESG objectives. SIX does not administer any EU Climate Transition Benchmarks or any EU Paris-aligned Benchmarks.

The template for explaining how ESG factors are reflected in the key elements of the benchmark methodology can be found on the SIX website:

11 **General Information on SIX Indices**

11.1 **Calculation Interval and Publication**

SIX calculates index values end of day for all the indices and intra-day for the most common indices. Index values can be found via different data vendors and index reports can be subscribed on a daily basis.

11.2 **Notification Service**

Customers are notified via e-mail or via index reports for index trigger events such as:
- Changes in corporate actions and dividends
- IPOs and delisting of companies
- Updates to the periodic index reviews
- Problems and errors in the index calculation
- Launch of new indices

The index methodology and index related information can be found at: [www.six-group.com](http://www.six-group.com)

12 **Limitation of Liability**

SIX Financial Information Nordic AB is not liable for damage caused by the enactment of Swedish or foreign laws, measures adopted by Swedish or foreign authorities, acts of war, power cuts, interruptions in telecommunications, fire, water damage, strikes, blockades, lockouts, boycotts or other similar circumstances beyond the Index Owner’s control. The reservation applying to strikes, blockades, lockouts and boycotts applies even if the Index Owner itself is subject to or adopts any such conflict measure.
Under no circumstances is the Index Owner liable for any loss of data, loss of earnings or indirect damage.

The Index Owner gives no express or implied guarantee with regard to the results to which use of indices provided by SIX Financial Information Nordic AB may give rise or with regard to the value of the indices at any given moment.
