

PRIIP-KID Service - How it works

Content

Product manufacturers provide SIX with product information

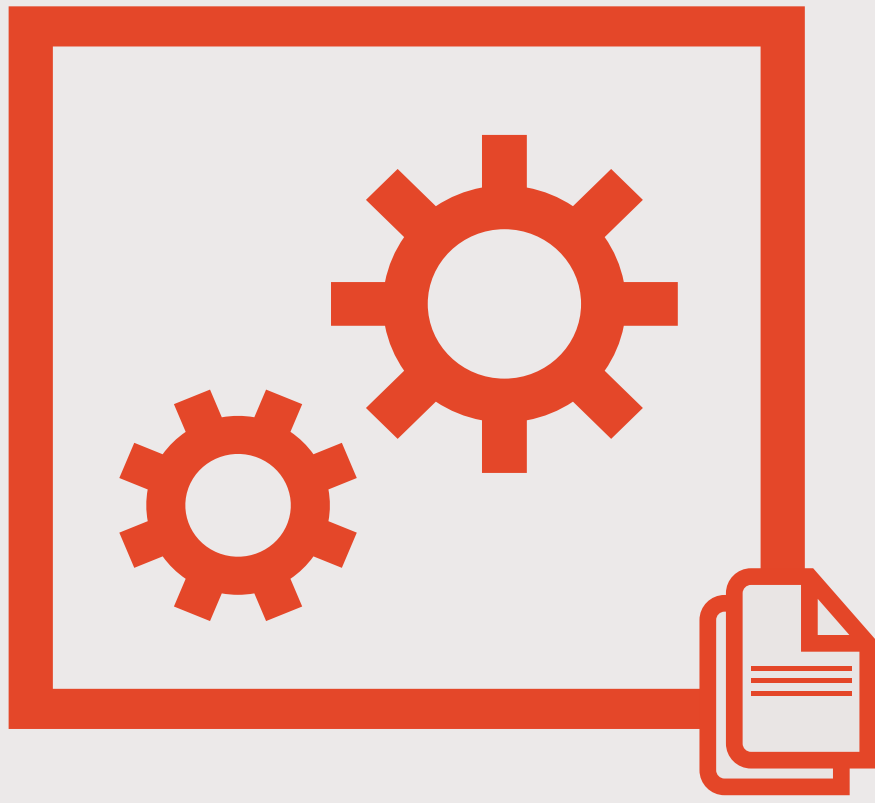

Legal information for all EEA countries is provided by legal partner in respective languages

SIX combine this information with the necessary **underlying and risk profiling data**

Generation

PRIIP-KIDs are produced using the **legal terms and language** of the country in which the product is deemed to be sold

If an update to a product is triggered, the document generator will **create the most recent version**

Distribution

Third parties also feed **KIDs and other pre-sales documents into the Doc Hub** for further distribution, providing a **single point of access for advisors**

Every document is **archived for 10 years**

Generated documents are **immediately available** in the Doc Hub

Retrieval

Integration into core banking systems, or access via a web-interface enables advisors to **share documents with clients in time before sale**

Every document retrieval is **tracked and archived for 10 years** to provide an audit trail
