Information ⓘ

Dear Vendor

As previously announced in section 3 of the [MSC Message 26/2018](), the updated SIX MDDX Specification v1.7.0 is valid for the optional SWXess Maintenance Release 7.2 (SMR7.2). The updated document is relevant for those participants intending to use the **MoldUDP64 multicast** protocol.

The new version of SIX MDDX is intended to replace the Market Data Interface (MDI) which will be decommissioned by the end of June 2019.

! If you are a data vendor using **SoupBinTCP** protocol only, you should use the **SIX MDDX Specification v1.5.0**.

SIX will carry out a simulated disaster recovery in the SWXess Production environment on **Saturday**, **30 June 2018 between 12:00-1400 CEST**. The disaster recovery will simulate a complete failure of the primary datacenter at Hardturm with a subsequent failover to the DR (Disaster Recovery) datacenter in Lupfig.

Please be aware that, if you would like to participate in the disaster recovery simulation, you should use the **new IP address, 146.109.47.251**. All port numbers remain unchanged

We take the opportunity to remind you that all market data vendors are invited to participate in the simulation to verify their disaster recovery procedures and firewall rules for this scenario.

Your sincerely
SIX Exfeed Ltd
