Telekurs Financial and Unitek Engineering integrate Market Data Feed (MDF) into Reuters RMDS

In order to make its broad market data service available via the Reuters platform RMDS, Telekurs Financial now provides an integration service together with its development partner Unitek Engineering. This service is called TRIS (Telekurs RMDS Integration Service), and makes it possible to call up around 3 million actively traded instruments from the Telekurs data universe on existing Reuters RMDS installations.

TRIS bridges the technological differences between the Telekurs and Reuters platforms and displays the Telekurs data in the Reuters data model. In this way, all the terminals or applications connected to the RMDS can be fed with Telekurs data without any adjustments having to be made. Telekurs data can be used in parallel, as an additional, or as an independent back-up source.

With the Market Data Feed (MDF), the information from 850 different data sources is provided in a standard format. Stock exchanges can be readily activated or deactivated by means of authorisations without generating any additional integration work. The data access control system from Reuters (DACS) is also supported by TRIS.

TRIS has been tested with RMDS versions 5 and 6 and can be used immediately.

"We have made TRIS available on a general basis in response to a substantial need in the financial market", says Mirko Silvestri, Product Manager for Market Data Feed at Telekurs Financial. "We are pleased to have Unitek as an experienced and efficient partner who has known both our market data offering and the needs of our customers for years."

"Unitek has worked on development projects with Telekurs data and interfaces for 20 years. Unitek was able to contribute its vast experience to the partnership in an ideal way. The result is TRIS, a mature and high-performance solution for integrating Telekurs data into Reuters RMDS systems, which has shown good stability in use with Unitek customers since 2001. We are pleased to be working with Telekurs, a company that combines technological expertise, a good data offering, and market proximity for the benefit of customers", says Hanspeter Canziani, TRIS Product Manager and a partner at Unitek.

Should you have any questions, please feel free to contact Stephan Meier, Media Relations.

SIX Telekurs

As a leader in its field, SIX Telekurs specializes in the procurement, processing and distribution of international financial information. Financial market specialists at SIX Telekurs gather information from all the world's major trading venues – directly and in real-time. The SIX Telekurs database with its structured and encoded securities administration data for more than 5.7 million financial instruments is unique in terms of its depth of information and data coverage. With offices in 23 countries, SIX Telekurs combines the advantages of global presence and local know-how. www.six-telekurs.com

SIX Telekurs is a SIX Group company. On a global scale, SIX Group offers first-rate services in the areas of securities trading, clearing and settlement, as well as financial market information and payment transactions. www.six-group.com

Unitek Engineering

Since 1988 Unitek Engineering has developed software for sophisticated applications, primarily for banks. It focuses on the processing and consolidation of financial data from external and internal sources in databases (Oracle) and real-time platforms (Reuters RMDS). Unitek has created an especially stable and high-performance software platform for receiving and processing realtime price data which runs on Solaris, Linux and Windows. It is the basis for all real-time processing architectures and is also used with TRIS.
