

sLink

API solutions for efficient and secure information flow

sLink offers an ever growing number of Application Programming Interfaces (APIs), which enable secure and efficient access to the SIX SIS Services. Thanks to the API solutions, clients can easily use certain functionalities and services on an automated basis.

Customized connection

The APIs offered by SIX SIS mean clients can implement the functions into their software as they please, without having to follow any guidelines stipulated by SIX SIS. In this way, clients are able to decide where and how they want to integrate and use the SIX SIS functionalities in their client applications.

Boosting efficiency with automation

SIX SIS's APIs make it possible to automate manual tasks, meaning the flow of information is more efficient. This makes it possible to use information and services without any media breaks at the user's end, while optimizing working processes.

APIs offer a wide range of benefits:

- Greater efficiency thanks to automation of manual tasks
- Greater efficiency and lower probability of errors by preventing media breaks at clients
- Freedom in IT architecture as to where and how the service is integrated on the client side
