

# SIX Terravis AG

## Terravis CCPT-2026-020

**Version:** v1.0  
**Project Number:** 91092-4  
**Date of Delivery:** May 20<sup>th</sup>, 2026

## Executive Summary

In April 2026, Compass Security Schweiz AG (Compass) conducted a security assessment of the Terravis application. This document is intended to provide a high-level summary of the assessment results. Further details have been reported to SIX Terravis AG in a separate document.

## Scope

The following table lists the application in scope and the testing dates:

Target	Version / Date	Effort
<a href="https://test.np.terravis.ch/">https://test.np.terravis.ch/</a>	07.04.2026 - 15.04.2026	2.5 PD

The statements made in this document are only applicable to the exact dates listed above.

## Procedures

The Terravis application has been tested by simulating both attackers with and without valid user accounts using a black-box approach where no knowledge of the internal system such as application source code was provided. The analysis followed security testing industry best practices and included tailored tests considering the technology stack in use, ensuring a thorough evaluation of the application's security posture.

## Weakness Rating

Compass groups the findings into four categories: low, medium, high and critical. The ratings are based on their intrinsic technical properties and are not a risk score. Other factors such as a threat actor's motivation or financial loss incurred by a successful exploitation of a vulnerability have not necessarily been considered.

## Results

The security analysis of the Terravis application has not revealed any critical- or high-rated vulnerabilities that would require taking immediate action. A few medium- and low-rated findings were identified. While these issues do not present an immediate threat to the application's security, they should be addressed and mitigated in a timely manner to reduce residual risk and further strengthen the application's overall security posture.

## About

Compass Security Schweiz AG is a Swiss IT security company specializing in providing tailored high-quality attack simulations, security assessments and forensic investigations to customers. Founded in 1999, Compass has over 25 years of experience working on national and international projects with Fortune 500 companies, small and medium-sized companies, as well as with start-ups operating in the financial, medical, industrial, and pharmaceutical industries. The diverse training and specializations of our security analysts, as well as close cooperation with leading Swiss universities, ensure that our analysts are always informed about the latest developments in the security industry.
