

Clearstream D7 Converter

Automated Submission of Reference Data and Lifecycle Events to Clearstream's D7 Platform

Through CONNEXOR, clients can benefit from a direct interface to Clearstream D7 Digital Market, converting and transmitting product reference data into the D7 Platform on behalf of the Contracting Party, to support registration of electronic securities at Clearstream.

Increasing Efficiency Through Synergy

Clearstream D7 Converter, developed in collaboration with Clearstream's D7 digital post-trade platform, streamlines the processing and distribution of financial instruments data in the German market. This integration supports the issuance of electronic securities in compliance with the German eWpG regulation, combining robust market infrastructure with digital innovation. CONNEXOR enables issuers of financial instruments to submit product and lifecycle data, which is then standardized and seamlessly transmitted to Clearstream within the D7 framework.

This service delivers key benefits such as:

- Issuers won't have to initiate a separate project and map the product information to a new data model savings internal costs and resources
- No maintenance costs for managing a new interface
- Leverage existing IBT & IBE connectivity to submit product reference data and life-cycle events to Clearstream

Quality and Volume Increase Through Digitalization

By leveraging CONNEXOR's one-stop-shop solution, issuers can handle higher data volumes for different markets within the same interface. Simplified transmission procedures further enhance operational efficiency, allowing issuers to scale digital issuance processes reliably and effectively. The service covers all structured products falling into EU EUSIPA classification, including IBT and IBE conversions. The solution covers various lifecycle events, such as redemptions, increase and decrease of the issue size.

About CONNEXOR

CONNEXOR is an XML based, highly scalable platform that facilitates the efficient management of reference data along the life-cycle of financial products. It is an established reference data standard for the issuance and distribution of issuer-originated financial data. The CONNEXOR service suite includes CONNEXOR Events which allows issuers to automate the life-cycle management and reporting processes for structured products. The IBE platform enables the electronic submission of product event information, including Barrier Events (BREVs), Rule-based Parameter Adjustments (RAPMs), Redemptions (REDMs), Early-Redemptions (ERDMs) or Income Payment instructions (ICPYs).
